

TradeSolver User Manual

TradeSolver is a trading system where you get the finest system for Intraday Trading with proper entries and exits required in Day Trading.

Intraday Trading is the toughest form of Trading as 90% of traders across the world make losses in it and only a handful of 10% of traders make money out of it.

Major Reason of losing money in Intraday Trading:

- 1) **Nature of Market:** The behavior of the market in itself is very volatile and dicey due to constant buying and selling happening in various segments, stocks, and indices. This buying and selling have many external impacts like global markets situation, the economic strength of the particular country, global events like War Issues – FED rates, and many other factors due to which markets get impacted and resulted in buying and selling decisions accordingly.
- 2) **Improper Buying and Selling Decisions:** In Intraday Trading Entries and Exits are the most important factors because that alone going to contribute to your overall profitability in your trading journey, majorly these decisions by traders are very impulsive which causes them a consistent loss in day trading.
- 3) **Absence of parameters to know where BIG MONEY is buying and selling:** Big Traders – Institutions – Insiders are ones who majorly moves stocks hence markets with it but eventually there are very less effective ways of tracking it and hence retailers are majorly clueless before any aggressive moves happening on either side.
- 4) **Not having a proper system:** Traders are not having a proper system that takes care of Technical and a few more important parameters for Day Trading. Also traders are not having a proper system that can generate good entries and exits with a proper risk to reward ratio at the same time.
- 5) **Hope Trading:** One of the major reasons for making losses in Day Trading is - Traders do make entry and exit decisions with the hope that movement will happen in their respective directions according to their entry.

To address all these issues and to help a Day Trader to take right entry and right exit decisions we have created a **TradeSolver system** which helps Day Trader immensely in their Intraday Trading.

TradeSolver is a system which takes care of all these parameters and gives you proper entries and exits based on 3 important factors:

- 1) **Price Action Trading:** Entry and Exit parameters of TradeSolver System are based on price action trading which is most important thing to be followed while doing day trading.
- 2) **Right Combination of Technical Analysis:** TradeSolver system takes care of important aspects of price action trading as well as important parameters required in technical analysis.
- 3) **Following the Big Money:** TradeSolver system follows big positions created in stocks with price action happening in the stock which helps us to understand the right entry part and at the same time it helps us to take the right exit along with it as major reason of losses in Day Trading is due to not taking right exit from the stock.

TradeSolver System: (Stock-Futures-Forex-Crypto)

✓ How to load TradeSolver System?

You can see **TradeSolver system** in your “TradingView Free Charts” once you subscribe for it.

While Subscribing share your TradingView ID and Email ID with us so we can make your system live then:

- 1) Go on TradingView Charts
- 2) Go to Indicators
- 3) Click on “Invite-only scripts”
- 4) Click and load TradeSolver on your charts
- 5) System is live now

✓ How to use TradeSolver System?

In your TradeSolver system you will able to see 2 important lines for taking BUY Entry and for taking SELL Entry.

- 1) Buy Entry: Close above dark green dotted line is indication of buying. You can initiate buy here
- 2) Sell Entry: Close below dark red dotted line is indication of selling. You can initiate sell here

Example 1): Buy Entry

Stock Trading & Investments

Example 2): Buy Entry

Example 1) Sell Entry

Call/WhatsApp: 8999623442/8149276169

Example 2) Sell Entry

Candles:

There are 4 important candles we used in TradeSolver system and this 4 candles are shown by 4 different color other than regular Green and Red candles,

- 1) **Blue Candle:** It indicates buying is stronger, it shows us that buying is happening and movement on the upside can be happen soon. If Blue candle comes after or at the time of our BUY ENTRY is getting triggered according to green dotted line, then it's a good sign.
- 2) **Purple Candle:** It indicates the buying of big money (large quantity) has been done in that zones.
- 3) **Black Candle:** Black candle indicates Exit signal, if black candle is coming after buy is getting initiated then it indicates we should take exit from there.
- 4) **White Candle:** White candle indicates big money (large quantity) are exiting from the stock and hence probable further downside can may come in the stock.

Here in Image 2, we can see R1 and R2, they are nothing but two resistance zones automatically marked by TradeSolver System. Here @ R1 and R2 either you can book your Intraday profits or you can trail them.

StopLoss can be placed below previous candles low once Buy Entry is triggered or below Major Support is getting marked automatically on the system.

Buy Entry and Exit: Image 3

Scenario 2: BUY ENTRY

If we missed green dotted line first entry, then can we buy above that?

Yes, you can but good to take entry once the MAJOR Resistance is getting created and that is getting broke – good to enter at that point.

Re-Entry: Image 4

Re-Entry: Image 5

Major Resistance and Major Support will get created on charts automatically according to TradeSolver System, we can use that for re-entry incase if it breaks on any side.

Scenario 1: SELL ENTRY

Image 6

Image 7

Scenario 2: SELL ENTRY

If we missed red dotted line first entry, then can we sell again below that?

Yes, you can but good to take entry once the MAJOR Support is getting breached on the downside – good to enter at that point.

Re-Entry: Image 8

Guidelines:

- ✓ Initiate Buy Entry only when green dotted line is breaking and candle closing above it.
- ✓ Initiate Sell Entry only when red dotted line is breaking and candle closing below it.
- ✓ As it's used for Intraday Trading, so Timeframe to be used should be 5-minute chart.
- ✓ For Trend understanding, we can use hourly chart.

TradeSolver system all and all is perfect solution for Day Trading as it avoids major false entries and help you to enter according to price action and according to major buying/selling happening (quantities) at that moment.

Charges:

Charges for TradeSolver system are 500/- Rs for a month
