

HOW TO READ STOCK CHARTS

A STEP BY STEP GUIDE

- Learning how to trade the stock market successfully can come with a lot of challenges.
- There are many different strategies and stock market terms to learn, and you will need to create an edge over the market.
- Something that can help you create an edge over the market is reading and accurately analyzing stock charts.
- In this post, we go through everything you need to know about stock charts and how you can start reading them to find high-probability trades.

WHAT EXACTLY IS A STOCK CHART?

- A stock chart shows you a visual representation of what price has done over a certain period of time.
- For example, a 15 minute stock chart shows what the price is doing every 15 minutes, or you could be looking at a longer-term chart such as the weekly chart.
- Stock charts are used to quickly get an idea of what price has done in history and what it could do in the future.

CHOOSING THE BEST STOCK CHART

- **Line Chart**
- This is the simplest of all the stock market charts. This chart also has the least amount of information and is just one long line moving higher and lower.
- As price moves higher or lower, the line chart will be updated and form a line.
- This type of chart is good for quickly spotting potential trends and also marking support and resistance.

jayneshkastiwal1 published on TradingView.com, Jul 01, 2022 10:47 UTC+5:30

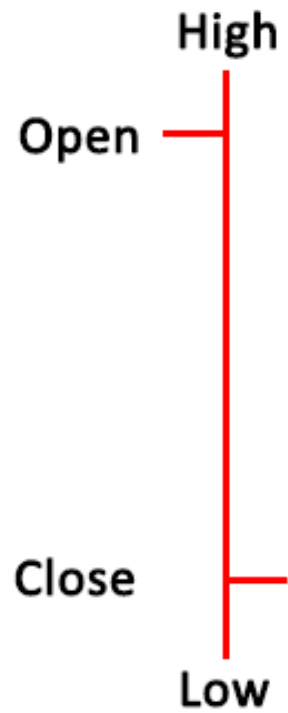

- It doesn't Consider the wicks or tails like in a normal candlestick
- The line is only the closing and opening price of the time frame

BAR CHARTS

- The bar chart and candlestick chart are similar.
- The bar chart shows you more information than a line chart as it also shows you the open, close, high, and low that price made for each session.
- The example below is a bar chart. The left tip or wing shows where the price opened. The bar high and low show how far the price moved, and the tip on the right is where the price closed.

jayneshkasiwal1 published on TradingView.com, Jul 01, 2022 16:27 UTC+5:30

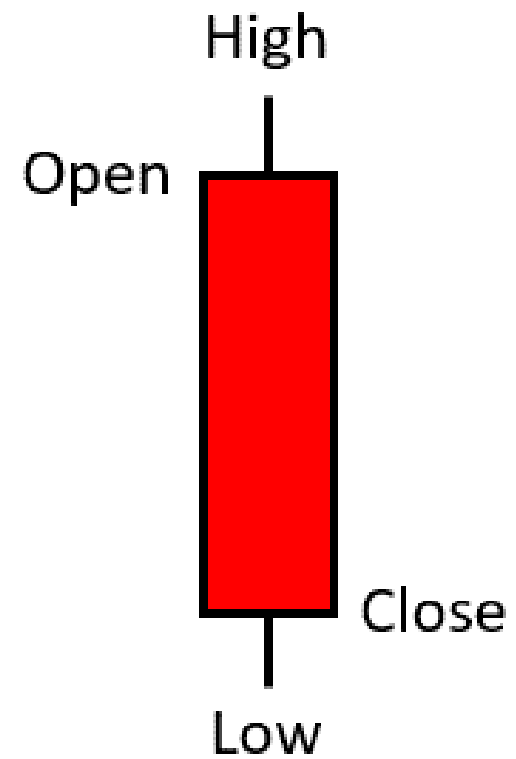

JAPANESE CANDLESTICK CHARTS

- Whilst the candlestick chart shows you the same information as the bar chart, it also includes a body. You can normally change the color of the candle body to suit your own needs.
- Having a candlestick body is so handy because you can quickly and easily see if the price has moved higher or lower.
- In the chart below, the red candles are bearish candles where the price has moved lower. The green candles are bullish candles where the price has moved higher.

Bullish candlestick

Bearish candlestick

HOW TO READ STOCK CHARTS

- After choosing the type of chart you will use, you will then want to start analyzing these charts to find and manage trades.
- Some of the most popular strategies for reading stock charts include;
 1. Look for a obvious Trend
 2. Use Support and Resistance
 3. Add important Indicators
 4. Follow Volume Information

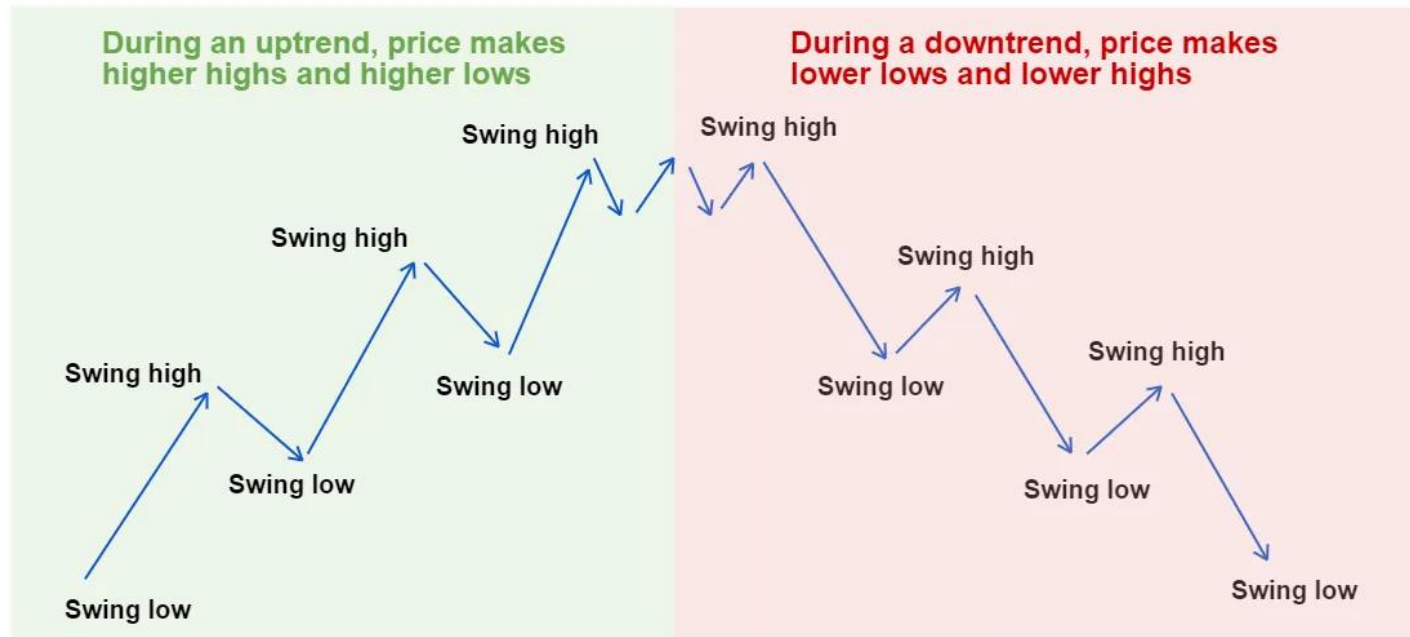

LOOK FOR THE OBVIOUS TREND

- Trading with the obvious trend can often reward you with long-running winning trades that can be minimal risk.
- Obvious trends will tend to run for long periods. Whilst every trend has pullbacks where price makes a move against the trend until the trend fails, it can offer high probability trades.

- In the example chart below price is on a trend higher. Price makes regular moves and swings lower against the trend, but the trend overall continues moving higher.
- These swings lower against the trend can often be the best spots to look for trend trading entries.

USING SUPPORT AND RESISTANCE

- Support and resistance are some of the most common forms of trading across all different markets and time frames.
- When using support and resistance in your trading, you can either look for the support or resistance to bounce or for a breakout.

- In the example below, price moves into an important area of support. This could be a high probability area to look for long trades before the price rejects the support level and then moves back higher.

ADDING IMPORTANT INDICATORS

- Stock traders will often use indicators in their chart analysis to get an idea of what price could potentially do in the future.
- One of the most popular indicators in the stock market is the moving average and, in particular, the longer-term 200 period simple moving average.
- The 200 period moving average can give you a quick indication of the overall price trend, and it can also be used as dynamic support and resistance.

- In the example chart below, we can see that price continually stays below the 200 period moving average.
- We can also see that each time price moves higher to test this moving average, it rejects it as resistance and moves lower.

In the example chart below, we can see that price continually stays above the 200 period moving average.

We can also see that each time price moves lower to test this moving average, it rejects it as Support and moves higher.

FOLLOWING THE VOLUME INFORMATION

- Volume in the stock market is the amount of shares that are being traded.
- Volume can be a key indicator in the stock market, and you can use it to find potential trades. You can also use it to confirm a potential trade idea you had.

- When the price is moving higher with increased volume, it is normally seen as a good sign that the stock is strong and healthy. The opposite is also true when the price starts falling, and the volume is increasing. This can mean the stock is losing momentum.
- If the volume starts to become less and less after a large move higher or lower, it could be a sign that a potential reversal in the opposite direction could be on the cards.

MENTORSHIP PROGRAM

What Mentees have to say :

<https://wa.link/si4jn4>

Yes, Jaynesh has a good and simple approach to Trading style! ❤️ 10:58 pm

Yet another absolutely fantastic session Jaynesh, almighty bless you 🙏🙏 10:22 pm

You passion for teaching is visible in your sessions, kudos, long way to go 🙌 10:23 pm

Hope u all enjoyed Absolutely 10:23 pm

1 Unread Message

Superb session 🙌🙌🙌 10:24 pm

Being a beginner I have learnt a lot during this sessions
First thing what I need to acknowledge is.. I learnt How one should be calm and avoid panic during whole process of trading.
Secondly the way of applying S&R made trading more interesting for me .
And other content also was nicely arranged so It digested easily with examples.
And lastly all questions from audience also gave new perspective abt same stock.
Thanku sir for this sessions 10:45 pm

thanks jaynesh, your lucid style makes all the difference, many concepts which were alien are clear at the end of the course, would surely be signing up for the advance course, keep well ! 10:03 pm

Thank you sir for giving us such valuable insights and guiding us, and teaching us in a very simple manner. Thanks alot. 10:33 pm

Thank you so much Jaynesh. It was a wonderful set of sessions, and I personally liked the way you introduced the EMAs / support with so much of examples - there was so much to learn. Thanks again, looking forward to joining the advance batch. 9:46 pm

Before the session I thought I know trading coz I was in profit (mostly investment very low trading) but after the session my thoughts changed totally now I see my investment/ trading in a very different way

Sup and res I nvr used now don't trade without them

Thanks Jaynesh Helped a lot thanks to build on my understanding of technical concepts . Really liked the practical examples and your simplified way of teaching . Would be keen to enroll into the advanced course as well 9:53 pm

This set of sessions totally changed my view of stock market and trading Thanks a lot 9:52 pm

But I made a profit recently, 12% in JUBLINGREA, purely on the basis of 21 EMA, never have I ever been so much confident about a stocks value. All thanks to you 🙌🙌 9:02 pm

Now I read charts better 🙌🙌 9:02 pm

Until one day when my stars were bright and I came across Jaynesh's telegram channel 🙏 learnt technicals from him and now on p... Agreed.. Jayesh's training really helped a lot 10:57 pm

I [redacted] ani • 1 day ago

I am currently taking his program and find it very beneficial. Its worth is much more than the price of the program. I recommend everyone to take his program. Honestly he hasn't asked to comment this but I really like his course and thought of appreciating it on public platform.

ADVANCE SWING TRADING GROUP

Price : ₹2000/- | Time : 2 PM - 4 PM on Google Meet

CONCEPTS :

- ✓ 4 Stages of Stock : Stage Analysis Entry , Exit and How to Avoid Big Losses
- ✓ Swing Trading Strategies Volatility Contraction Patterns, Moving Average Strategy , Breakout Trading
- ✓ How to find Super Performance and Multibaggers using Relative Strength
- ✓ How to understand Broader Market , Sector Rotation and choose strongest Sector
- ✓ Basic Use Of Chartink Screener + Screener dashboard
- ✓ How to Select stocks for Swing Trading Entry , Exit , Targets and Stoploss
- ✓ Position Sizing and Risk Management
- ✓ Psychology For Trading
- ✓ Live Discussions and personal Stock Queries Session

Bonus :

Option Selling Strategy (Worth 2500)
Private Access to Telegram for 3 months (Worth 1500)

Recording will be provided

 767407938
