

Vertex FX 2.0

Date: / /

1) Order Block

⇒ OB needs to ^{on a} block the structure.

⇒ For a bullish move:-

OB is the last bearish candle before the bullish move.

⇒ For a bearish move:-

OB is the last bullish candle before the bearish move.

2. Refine OB

⇒ Refine OB in multi. TF & find which OB is not mitigated.

3. Imbalance (gap btwn buyer & seller)

Market is 50% Buying & 50% Selling

You have to find Order block which has clear imbalance above it.

* Find OB which is not mitigated on lowest TF (30s) where institution last sold/buy Date: / /

⇒ Sometime when OB & next candle's wick is same. the wick itself Imbalance.

4 Highs & Lows (To define Bullish/Bearish)

⇒ Consider some past data to know whether its bullish/bearish

⇒ then find BOS & then find left side of BOS High/Low

⇒ High & Low area called trading range

TRADING RANGE

⇒ To find TR is more imp. find Highs & Lows

Bullish :- Low is always left of High

Bearish :- " " " " Right of High

⇒ then find next High & Low only when prev. High/Low is broken. that's your new trading range.

btwn trading Range other impulses is not imp.
till they broke the high/low.

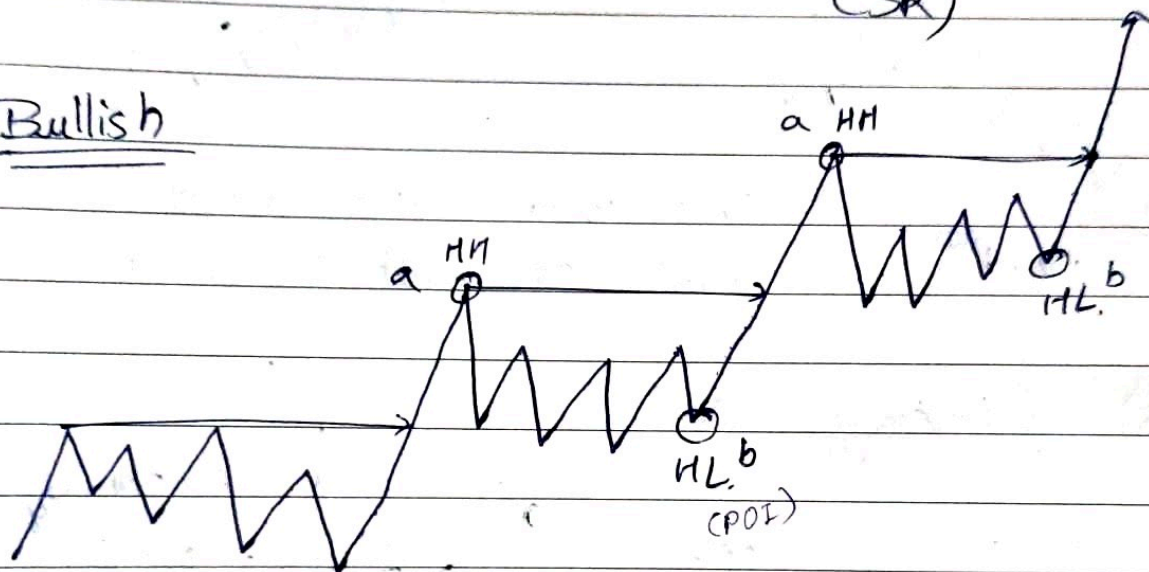

Date: / /

2 Imp. Rules. (to identify trend)

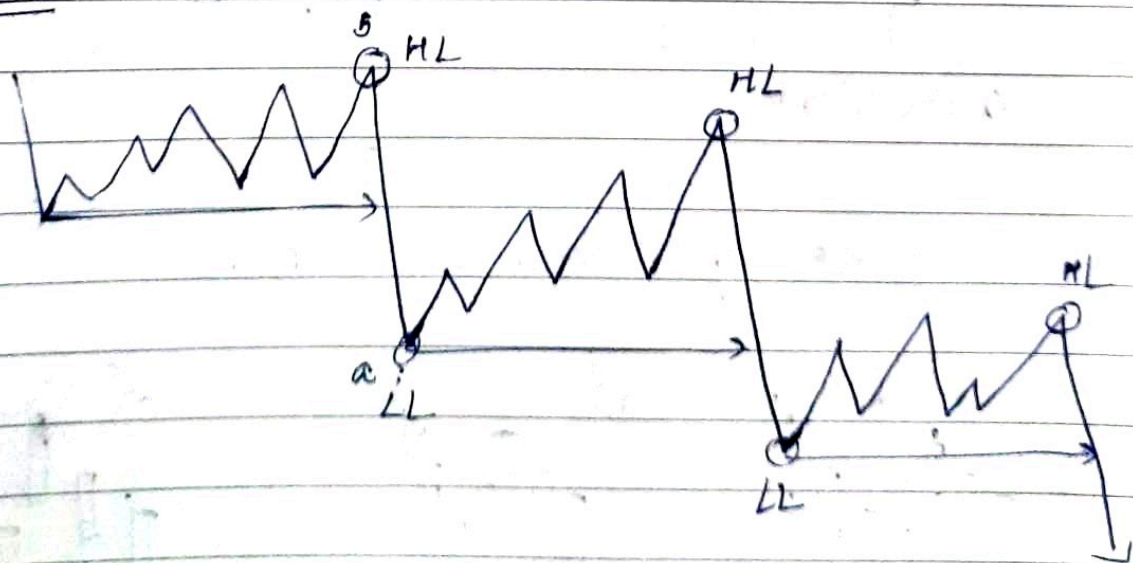

a) Impulse that break
a structural point.
(IM)

b) Successful Retrace:
Needs to break the
impulsive structure
(SR)

Bullish

Bearish

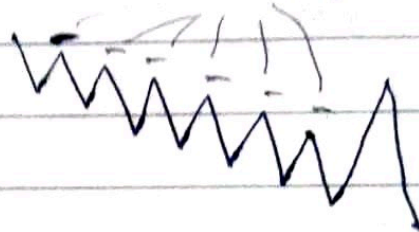

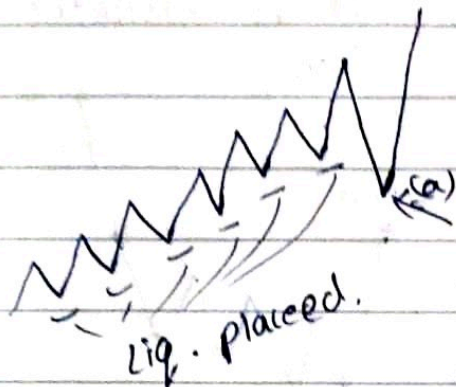

⇒ a b b creates trading Range
⇒ we find OB @ Point b

MATRIKAS

* $\Rightarrow$ Strong BOS :- which break prev. High / Low with impulsive moves. Date / /

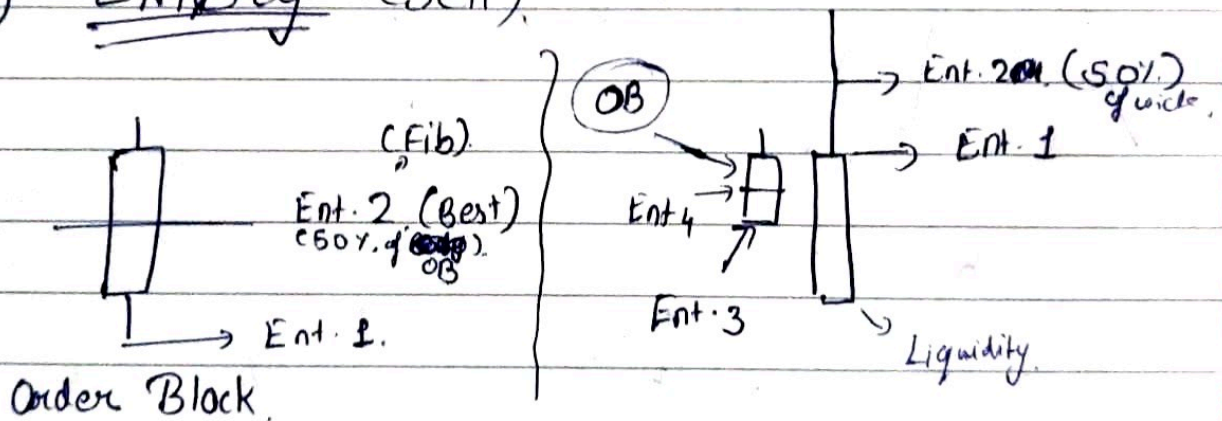

7) Liquidity.

$\Rightarrow$ Liquidity area means where SL orders are placed.

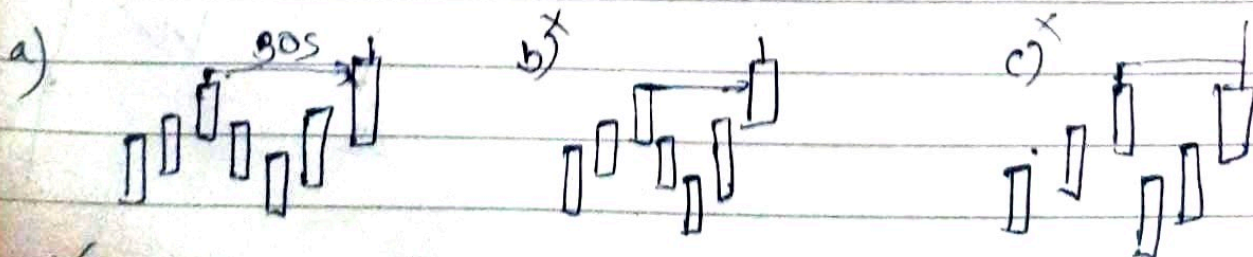

This continu. the trend until. (a) ~~point~~ Point is broken again.

7.8) Entry (sell)

(SL - 5 PIPS)

5 Break of Structure (BOS)

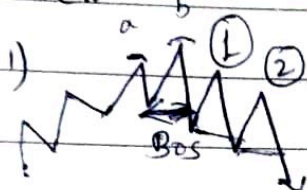

* $\Rightarrow$ Find OB :- if go to bigger (H1F) then minimize it to LTF. next candle (within the candle) is also an OB
Date: / /

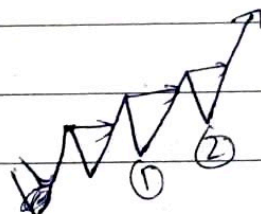

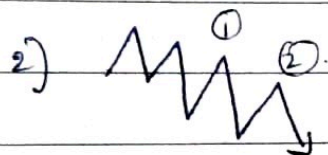

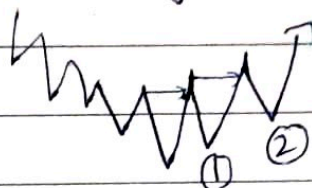

9. Risk Entry

OB

Sell

Buy

$\Rightarrow$ In 1st scenario b is grabbing liquidity from a (upper side SL/order). & then BOS

Entry 1 is not so much safe b'cos it may go against our trade.
Entry 2 is much safer than 1.

Date: / /

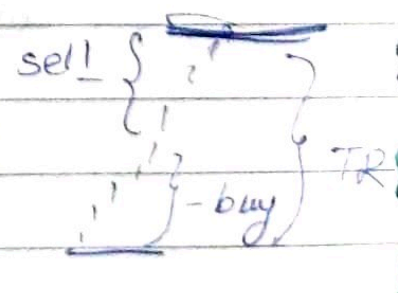

10 Confirmation Entries.

- ⇒ Find Entry in MTF
- ⇒ Set alert @ open of OB or 50% of OB & refine OB.
- ⇒ To take entry go to the LTF & observe the structure & enter. Target should be near prev. High/Low.

11 Trade Management

- ⇒ move SL near OB @ LTF (1Hr)

12 Complexities

- ⇒ Trading Range (H & L).
Buy :- below 50% of TR
sell :- above " of "
- 
- The diagram illustrates a trading range (TR) as a vertical bar. A horizontal line at the top is labeled 'sell'. A horizontal line at the bottom is labeled 'buy'. The entire bar is labeled 'TR' on the right side. The text 'Trading Range (H & L)' is written to the left of the bar.

PDF

Notes

Date: / /

1) MTF analysis.

Step 1) Analyse overall Mkt. @ HTF

W - D - 4H
↑
Trend Analysis most utilised.

Step 2) Identify expecting next structure -

HL, LL, HH, LL

Swing - 4H - D - W

Intraday - lower (4H).

TF Rules Rule of 3
(skip 1)

SWING

Monthly POI := 1H or D for entry.

Weekly POI := 1H or 4H for entry

Date: / /

INTRADAY

4H POI = 30 M or 15 M for entry.

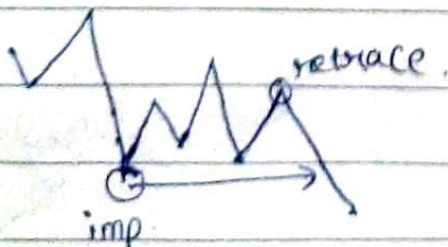

1H POI = 15 m or 5m " "

SCALPING

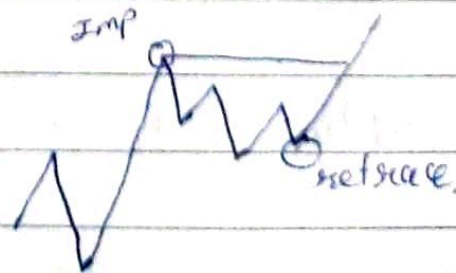

15 m POI = 5m, 1m or 30s for entry

When determining if price is bullish / bearish, you need two things.

- a) impulse :- which breaks a structural point
- b) Successful retracement :- which breaks the structure the impulse created.

Bearish trend

Bullish trend

Date: / /

These 2 rules will determine your trend on any TF. So identify what trend you are in on the HTF to identify your overall Bias & trend.

⇒ When following a HTF bias don't be confused with the LTF market shift. Always remember the bigger Picture. Highest Probability from a Trade comes from the alignment of MTF showing same trend bias. This is a high probability entry level.

Follow the Trend.

step 3

Identify your POI (OB)

⇒ Find OB on HTF, highlight & set an Alert at the open of OB

⇒ Go through multi TF & find OBs which are clear (not mitigated)

MATRIKAS

Date: / /

You may expect price to mitigate this OB before reacting. If you chose a risk entry method, this would be your entry candle.

Strong OB :- no wicks tickling into it. we want a clear OB & inefficiency / imbalance.

If there is ever an OB that you doubt, then it's not a clear OB. If it were a clear OB, you would never question it.

⇒ The main thing. BOS. A good BOS is key. (candle body break as a BOS, not just a wick break)

Entry

Set a limit order at the:-

- Open of the OB (high prob)
- 50% " " " (high prob)
- Wick tick, (only if it is present). (low prob)

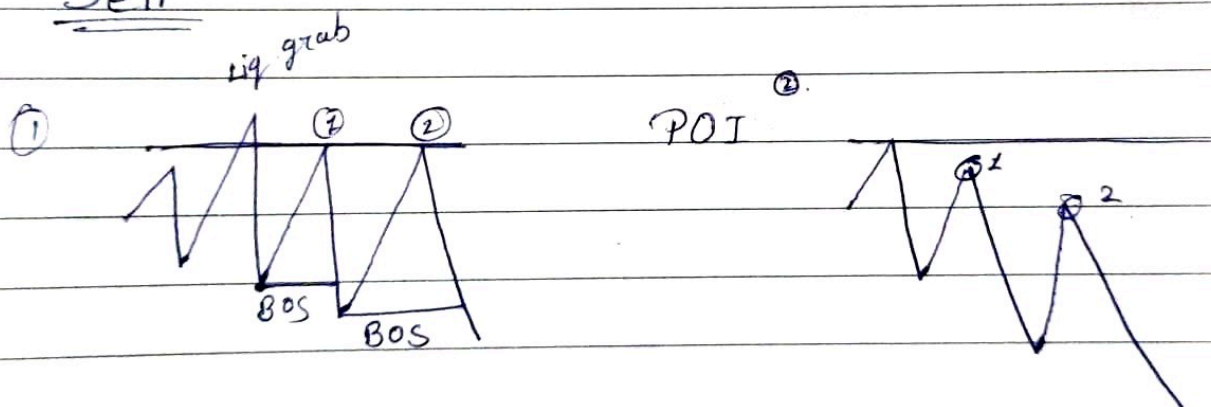

Date: / /

placed with stop loss including spread.
sell = above the OB
buy = below " "

(chose btwn these which has 5 pips stoploss).

Entry Time Patterns

Sell

Scenario 1 - Identify liq. grab which breaks the low the prev. high created
1st entry here can be the OB which created the break of the low, following our standard entry procedure.
2nd entry is a safer one purely as it confirms change in trend. Again using the OB from the failed high.

MATRIKAS

Date: / /

Scenario 2 :-

Identify a BOS. Main diff- here
we don't have a liq. grab.
1st entry same as (scenario 1)

For Buy. all theory is exactly (word
to word same).

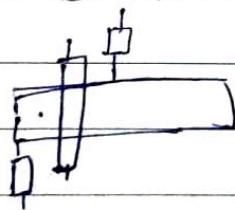

Date: / /

All about Order Block.

⇒ First Find BOS on HTF (which has strong impulsive moves).
exact Left side of BOS in bullish u find OB & right side of BOS in bearish find TOB.

⇒ If u find multiple OB then refine it by LTF which is not mitigated.

⇒ Another point to find OB right next to it u find imbalance.

- imbalance btwⁿ buyer & seller

⇒ If the body of OB is with in the next candle then next candle is yr OB

*⇒ Watch LTF ~~in~~ for OB (which have successful BOS or impulsive move & OB which is not mitigated is very imp.)

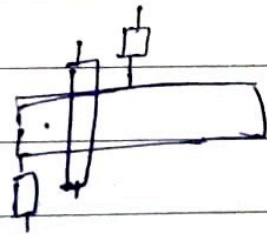

MATRIKAS

All about Order Block.

⇒ First Find BOS on HTF (which has strong impulsive moves).
 exact Left side of BOS in bullish u find OB & right side of BOS in bearish find TOB.

⇒ If u find multiple OB than refine it by LTF which is not mitigated.

⇒ Another point to find OB right next to it u find imbalance.

- imbalance btwⁿ buyer & seller

⇒ If the body of OB is with in the next candle then next candle is yes OB

⇒ Watch LTF for OB (which have successful BOS or impulsive move & OB which is not mitigated is very imp.)

Highs & Lows * Bullish scenario

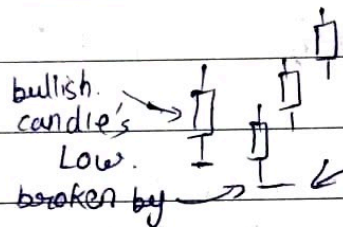

find Highs:-

Broken prev. High

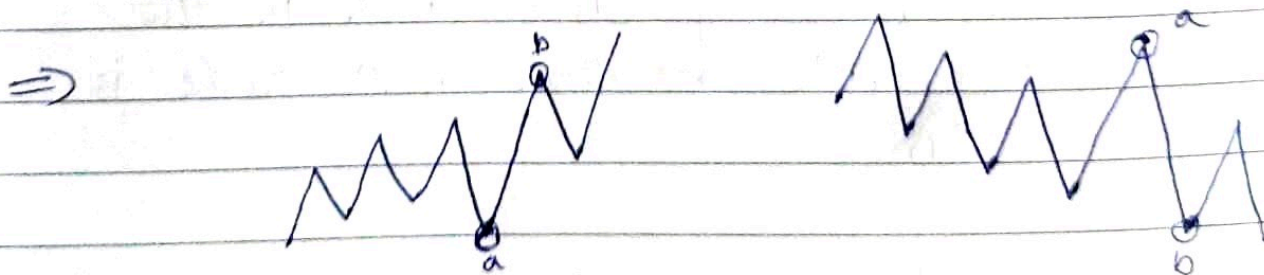

find Lows:-

Broken prev. Low

Go candle by candle. [Candle which broke bullish candle's low is lower]

Notes:- In BOS we are not considering the wick (here we need body which is imp.) but In Highs / Lows wick is considerable.

Here point a is not BOS it is just a liq. grab so wait till point b to confirm
