

THIS ONE IMAGE CAN FIX YOUR TRADING MINDSET

Most traders focus on WIN RATE
Smart traders focus on RISK : REWARD.

Look at this carefully 📌

1:1 Risk–Reward

Even with 40% win rate → LOSS
At 50% win rate → only Break Even

👉 Means: You must be right most of the time just to survive.

1:2 Risk–Reward

Only 40% winning trades → PROFITABLE

👉 You can lose more trades than you win and still make money.

1:3 Risk–Reward

* Just 30% win rate → PROFITABLE

👉 7 losses, 3 wins... still green overall.

1:4 & 1:5 Risk–Reward

Even 20–30% accuracy → PROFIT

👉 Accuracy is overrated. Risk control is underrated.

BIG MINDSET SHIFT (VERY IMPORTANT)

Wrong thinking:

* “I want more winning trades”

* “My accuracy should be high”

Correct thinking:

* “I want controlled losses”

* “I want bigger winners than losers”

TRADING TRUTH

You don't need to be right every day.
You just need small losses and occasional big wins.

Why Boredom Is GOOD in Trading

- * No overtrading
- * No revenge trades
- * No emotional decisions
- * Same setup, same rules, repeat

If trading excites you, you are gambling.
If trading bores you, you are doing it right.

Day-2 Lesson Summary

- * Think in probabilities, not predictions
- * Focus on process, not winning streaks
- * Detach from money, attach to rules

Homework:

Ask yourself honestly:

“Am I chasing winning trades... or profitable trading?”

This one answer will decide your future in FnO.
