Speaker Introduction

Know your Mentor

Ms Jyoti Budhia

- **Ms Jyoti Budhia** is a Trader – cum - Trainer who not only has good knowledge of Option Strategies but also of Technical Analysis. She knows the subject very well and articulates very clearly in her training programs. A diligent teacher, Jyoti takes her work very seriously and looks to put a hundred percent effort into whatever she does.
- **Nearly 35 years of experience** in Stock Market {1986 – BSE Out Cry System (Ring)}
- Expertise in Areas of Equities, Derivatives, Commodities, Currencies, Trading & Investments in Various Financial Products, Portfolio Management, Advisory, Risk Management & Training Segment.
- Visiting / External Faculty at, NSE (National Stock Exchange) , BSE BTI, BSE Brokers Forum, ANMI, NISM (National Institute of Securities Market), and many Reputed MBA Institutes
- Advisory published in Moneycontrol pro and Stock edge

Trading is very simple, Traders themselves make it complicated

JYOTI BUDHIA

Today's Agenda

A Session well planned is half done already

- ✓ Understanding IVR
- ✓ Importance of IVR
- ✓ Understanding open interest in futures
- ✓ Understanding open interest in options
- ✓ Using IVR and data to find critical points of reversal

What is Volatility

- Volatility is the rate of measure of the speed at which the price changes.
- Basically it is the fluctuations of prices calculated for a certain period.
- High fluctuations – High volatility
- Low fluctuations – Low volatility
- Nifty Index Volatility = India VIX

Types of Volatility

- Historical Volatility - This measures the historical fluctuations of the prices. Based on past / historical volatility, we try to predict the future movement of prices.
- Implied Volatility - It is a key parameter in option pricing. It can be used to predict future volatility/fluctuations.

Implied Volatility (IV)

- IV is often used to price options contracts where
 - high IV = high options premiums
 - low IV = low options premiums
- Generally Implied volatility increases in bearish markets and decreases in bullish markets.
- Options writers prefer to write options when IVs are high.
- Option buyers prefer to buy options when IVs are low

Implied Volatility Ranking (IVR)

- IV rank is a measure that brings relativity to implied volatility. Implied volatility is a factor in the determination of option pricing and attempts to measure future volatility. IV rank takes that measurement and averages it out so that there is the context around the current level of implied volatility. (Ref: Tasty Trade)
- IV rank is a much more useful measure than implied volatility for options traders.

Implied Volatility Ranking – (IVR)

- People use IVP - Implied Volatile Percentile also but **I simply use IVR**

The formula for IV rank is simple, really. It is:
$$100 \times \frac{(\text{the current IV level} - \text{the 52 week IV low})}{(\text{the 52 week IV high} - \text{52 week IV low})} = \text{IV Rank}$$

VIX – FIX Indicator

- While using IVR we use the indicator VIX-FIX
- VIX Fix means the indicator is not only based on the Nifty 50 but can be applied to any trading asset. (including Cash Market)
- Market BOTTOMS are identified by the peaks in the indicator histogram representation after which a bullish trend appears.
- Market TOPS are identified by the bottom in the indicator histogram representation after which a bearish trend appears.

REF: Forex Academy

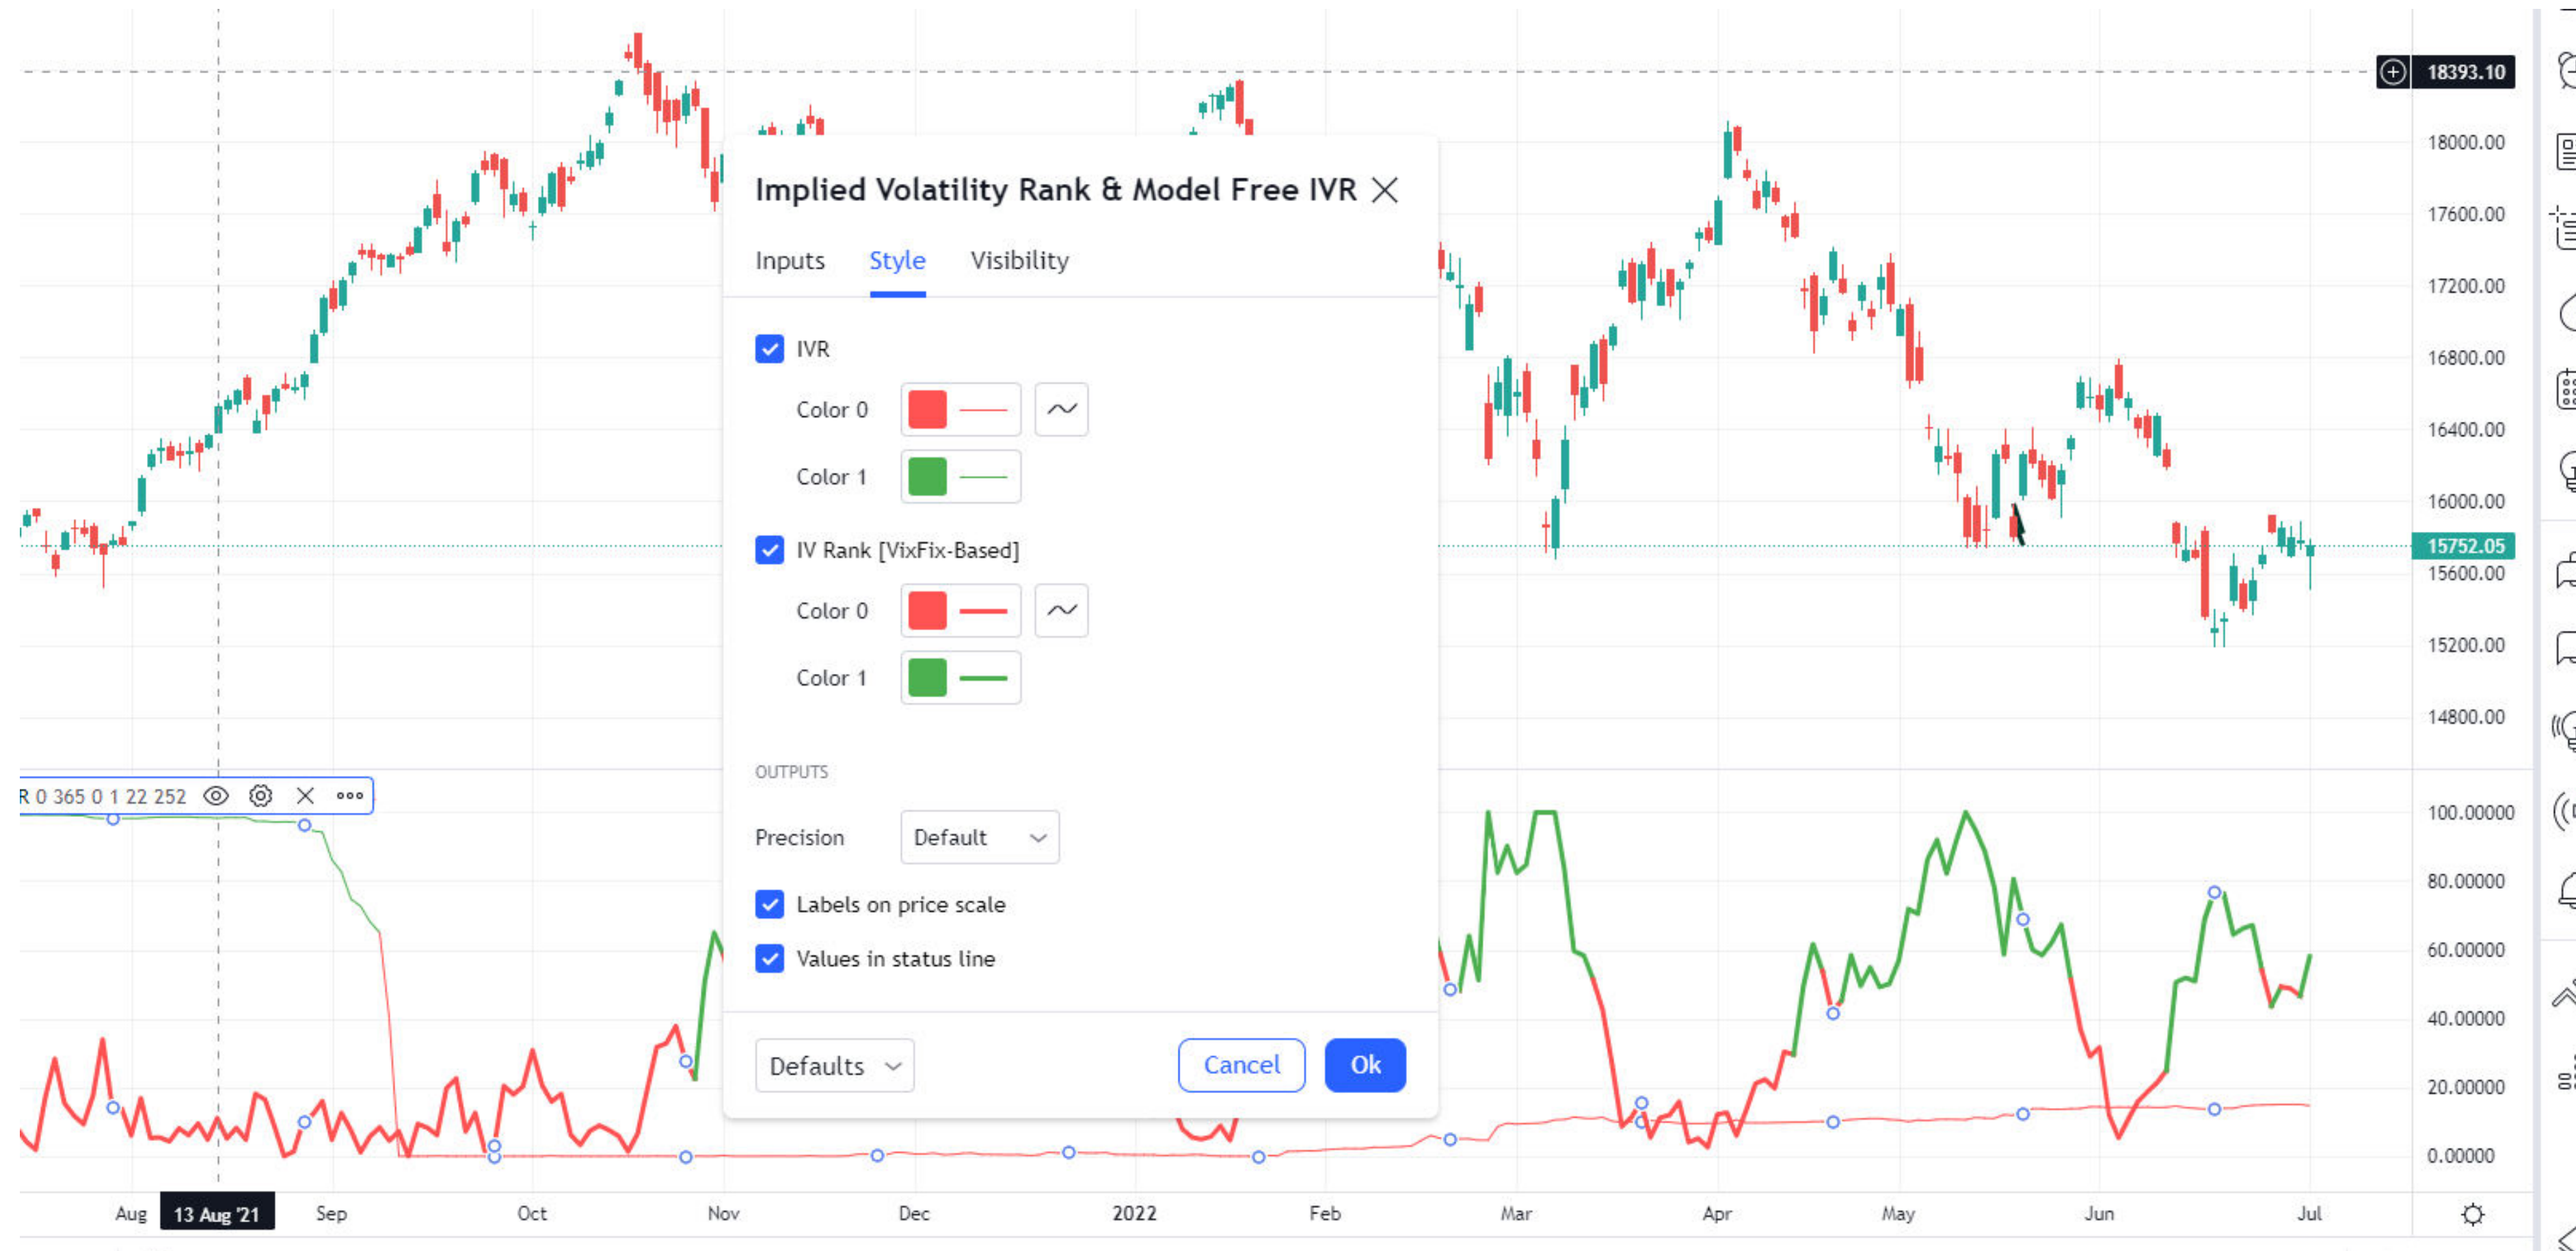

Using IVR – VIX FIX Indicator

- We simply use this along with our set of rules.
- Open Interest in Futures
- Open Interest in Options
- Also for Cash Market trades
- It can be used globally on any asset class like – equities, commodities, and currencies.

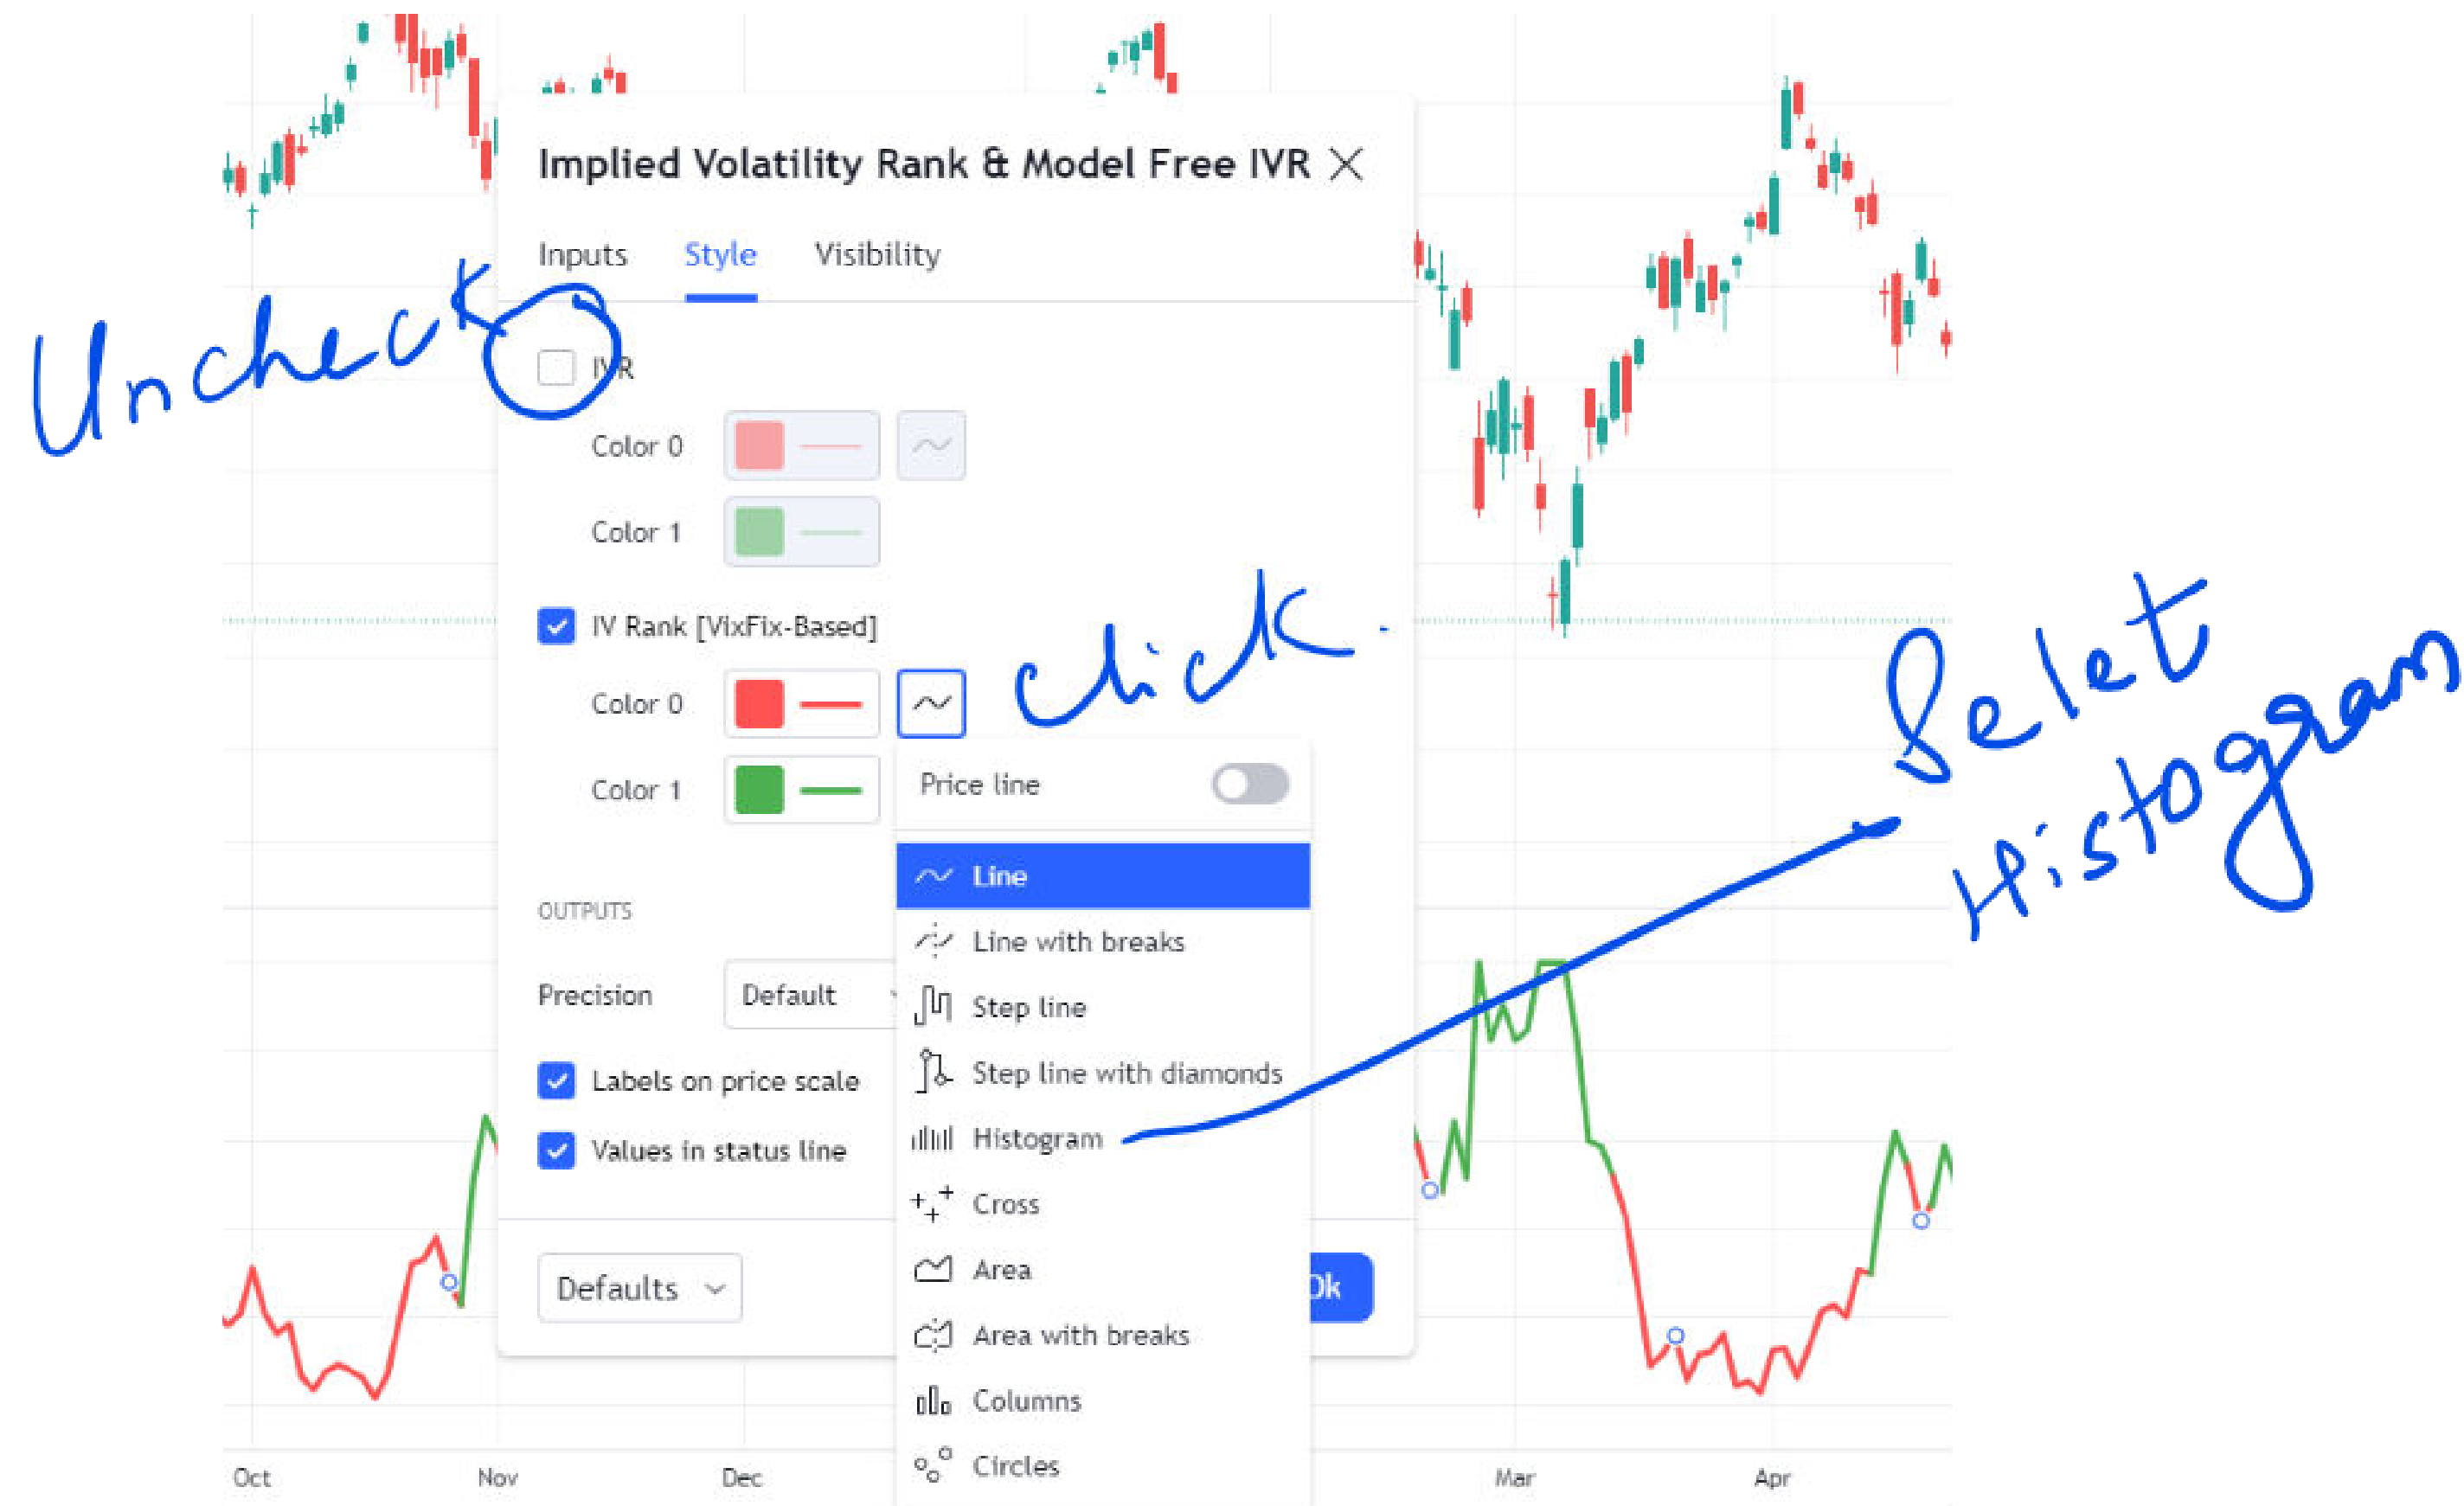

How to use in Trading view

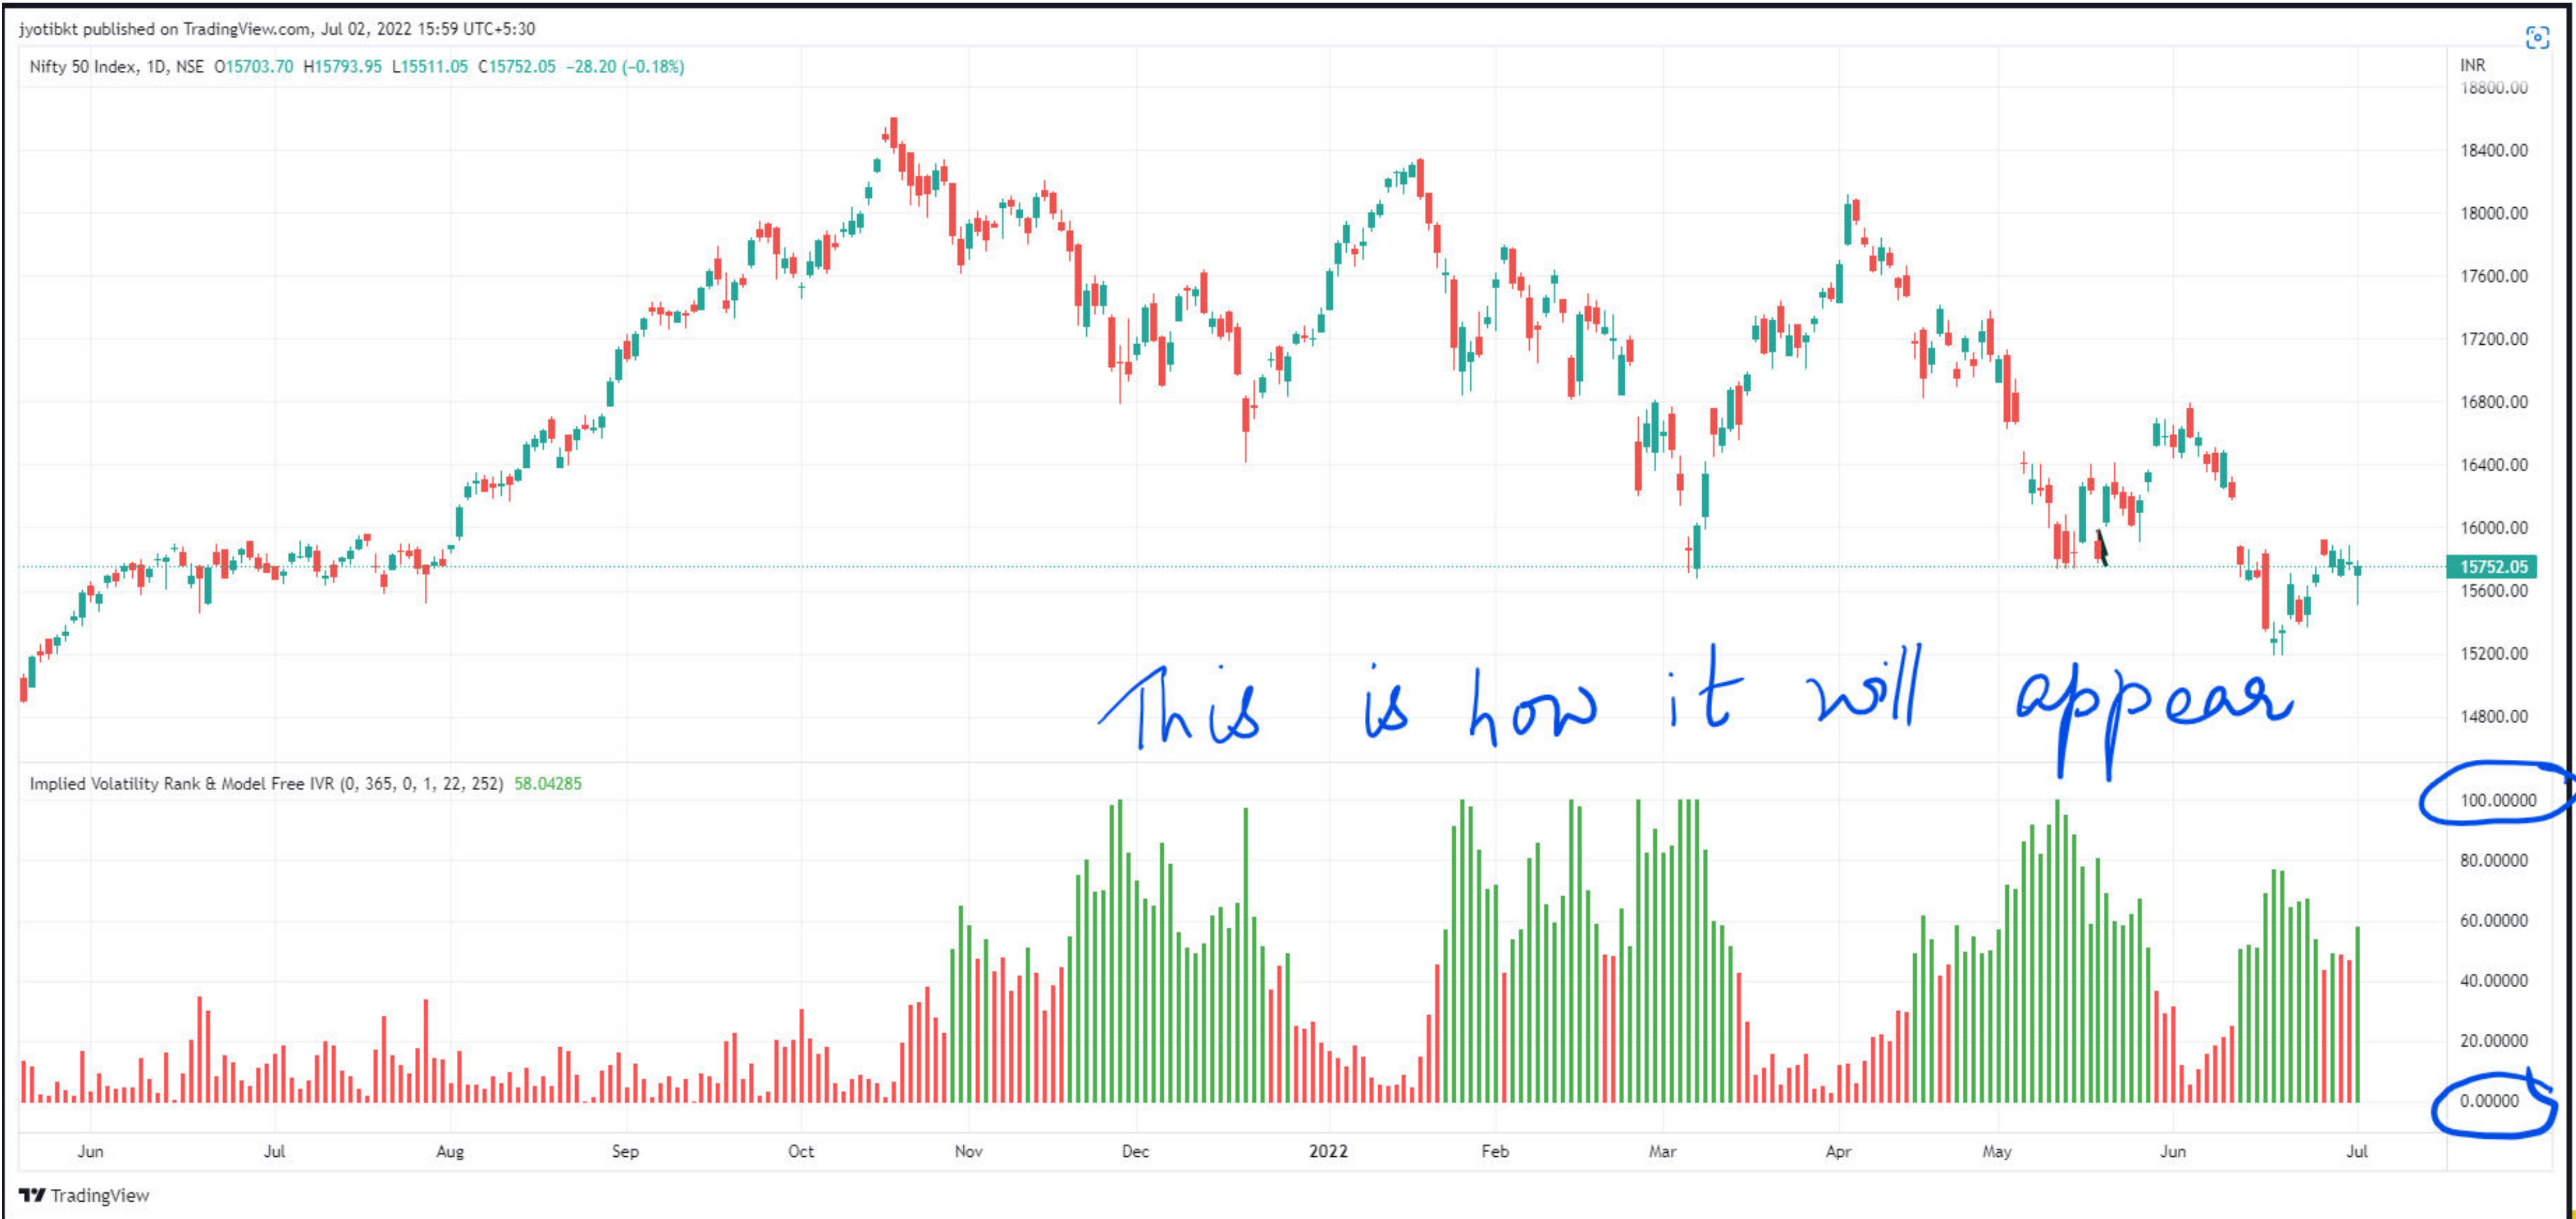

How I use - Settings -1

Link to get the details by SegaRKO in Trading view

- [Implied Volatility Rank & Model-Free IVR — Indicator by SegaRKO — TradingView](#)
- VIXFIX – This is a Specialist Indicator to trade after bottom /top, tending towards the reversal signals, and it is mostly a leading indicator.

Open Interest of Futures

FUTURES OPEN INTEREST INTERPRETATION		
Open Interest	Price	Interpretation
↑	↑	Long Build up
↓	↓	Long Unwinding
↑	↓	Shorts Buildup
↓	↑	Short Covering

Steps To Track

- Check the Build Up
 - ❖ Long Build Up
 - ❖ Short Build up
 - ❖ Long Unwinding
 - ❖ Short Covering
- No Trade without Hedge or Stop Loss

Long Build Up

- Check with Long Build Up If Open and Low almost same
- Check if we are near HPOI
- Or
- Check if HCOI is Unwinding and Puts getting added
- IVR between – 75 -100
- Best is between 90 - 100
