

Springboard Trading – Day 1

Foundation: Understanding Levels with Charts

1 Market Memory – Price Remembers Levels

What to observe on chart

- Price comes to a level
- Reacts → moves away
- Comes again → reacts again

This is **market memory**.

 Wherever price reacted strongly in the past,

 it becomes **important in the future**.

Charts don't predict.

Charts **repeat behaviour**.

2 Support – Visual Understanding on Chart

How Support Looks on Chart

- Price falls and **stops**
- Multiple candles form base
- Long **lower wicks** appear
- Bounce or consolidation happens

Key Learning

Support is an **area where sellers lose strength**.

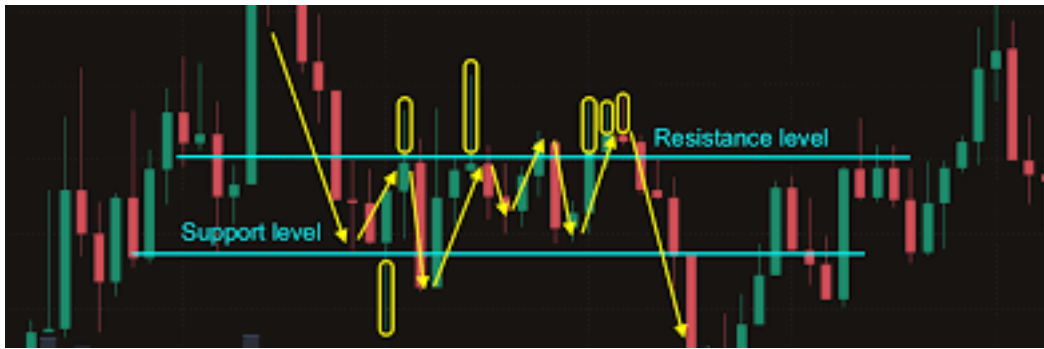

Important

Support does NOT mean immediate bounce.

Support means **decision zone**.

3 Resistance – Visual Understanding on Chart

How Resistance Looks on Chart

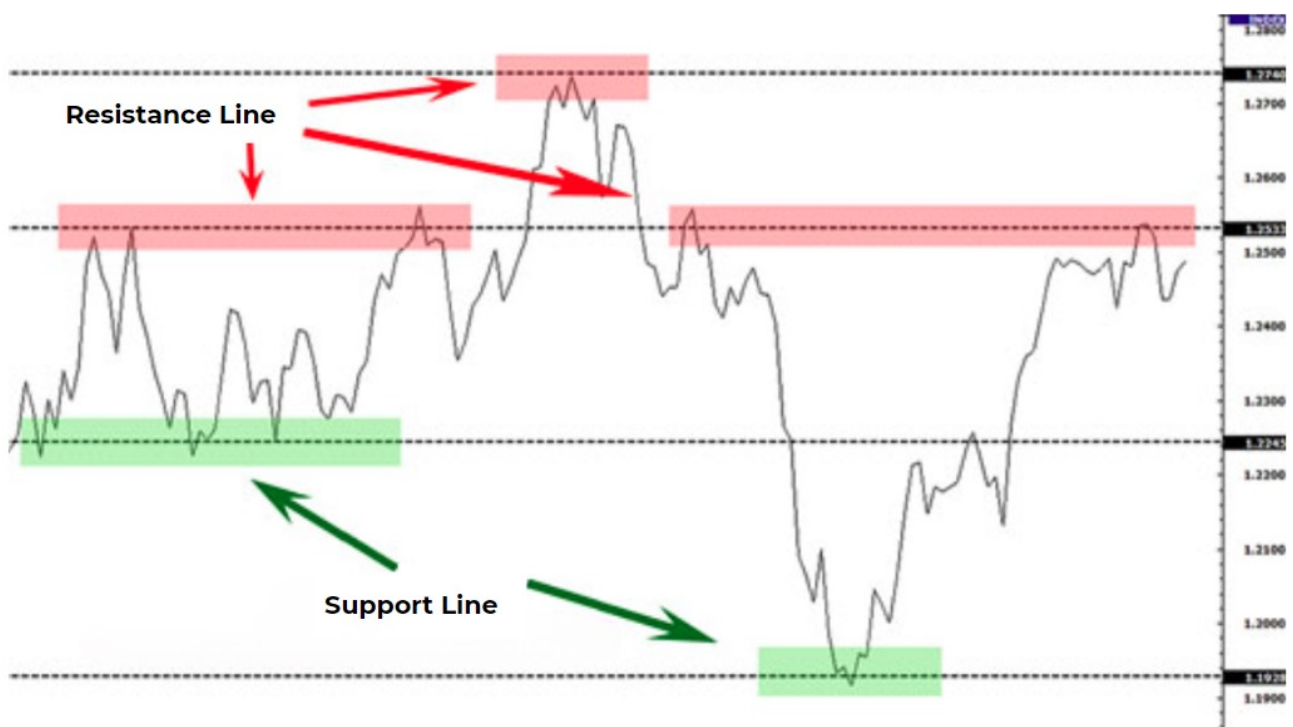

- Price rises and **struggles**
- Upper wicks appear
- Multiple rejections from same zone
- Sharp fall or sideways movement

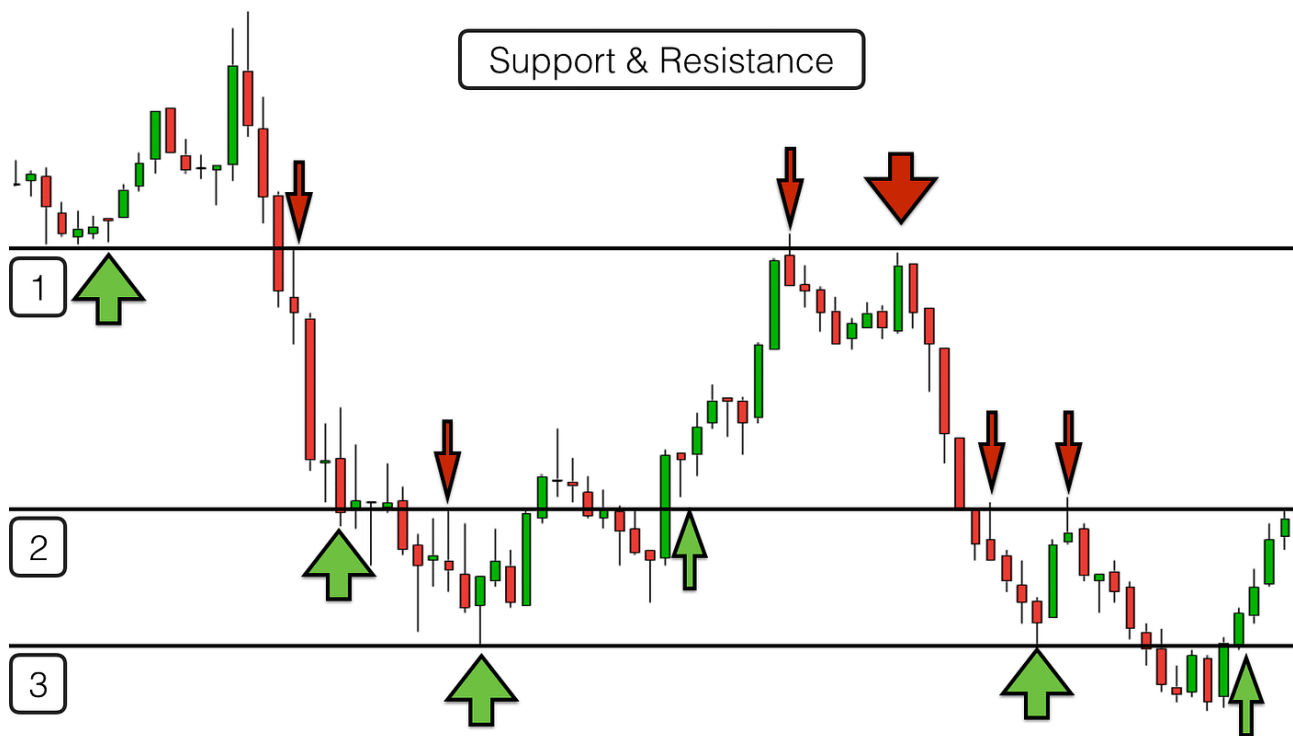

Key Learning

Resistance is an **area where buyers lose control.**

4 Zones vs Lines – Most Critical Chart Lesson

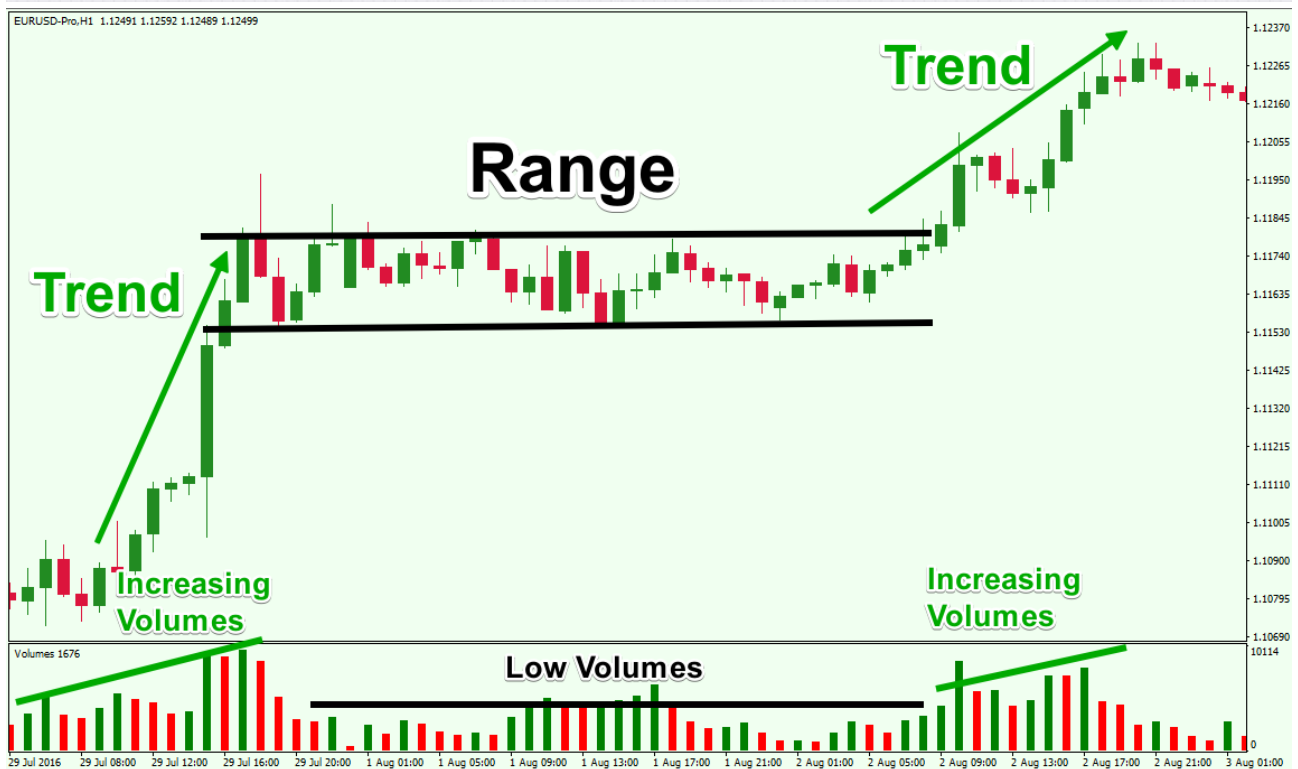

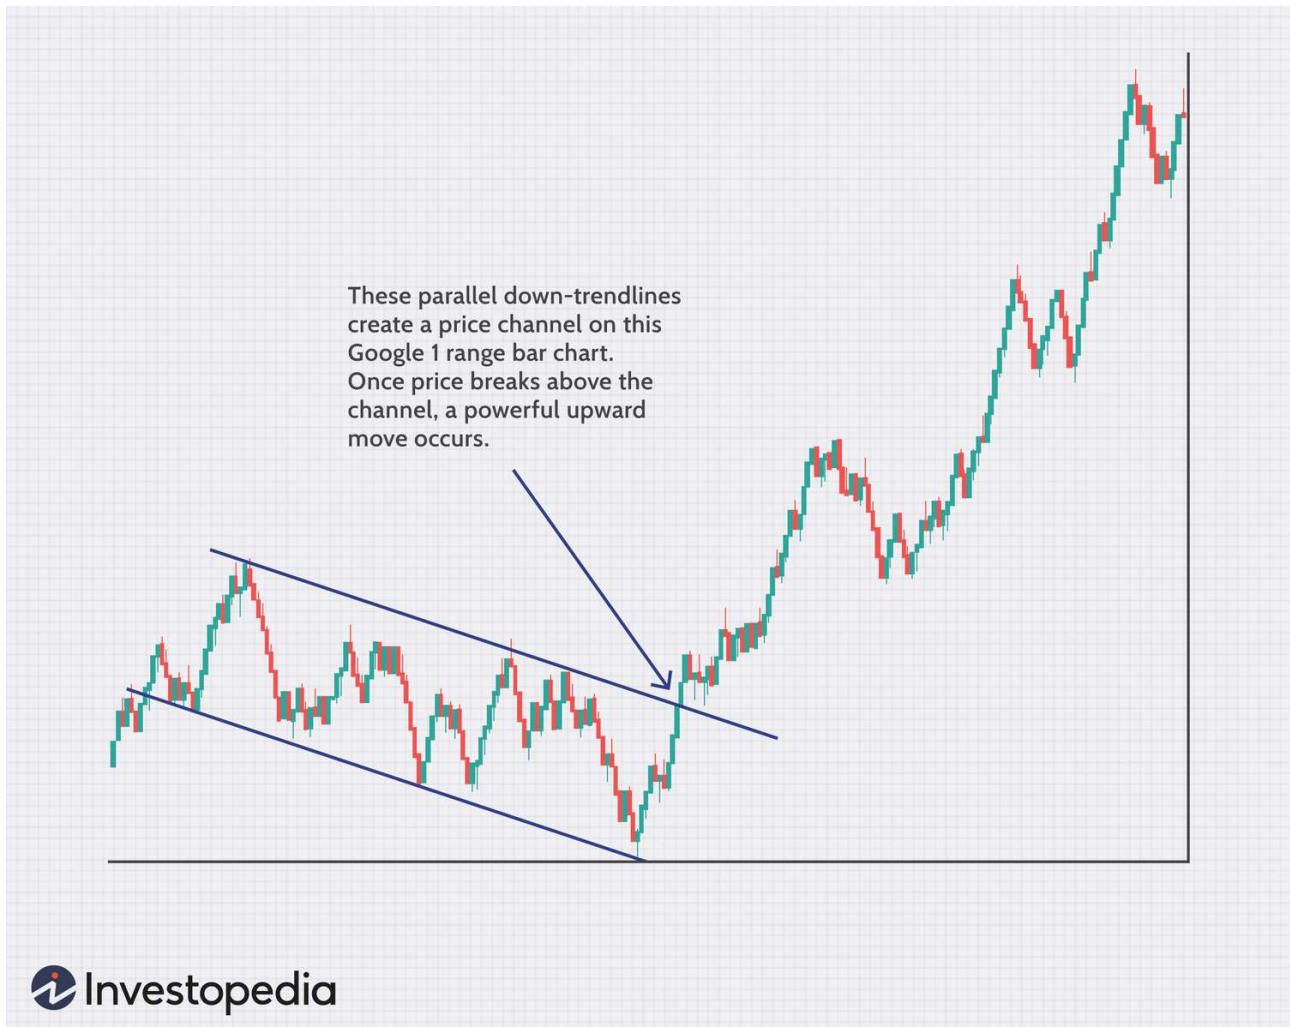

Beginner Mistake

- ✗ Drawing thin exact lines
- ✗ Expecting perfect touch

Professional Approach

- ✓ Draw **zones**
 - ✓ Allow small penetration
 - ✓ Focus on reaction, not price precision
- 📌 Institutions trade in **ranges**, not single prices.

5 Why Middle of Range is Dangerous (Chart Proof)

🔍 Observe:

- No clear support below
- No clear resistance above
- Random candle movement

📌 This is where:

- Overtrading happens
- Stop losses get hit
- Psychology breaks

No level = no edge

6 Springboard Concept – Chart Preview

What You See on Chart

- Price reaches level
- Moves sideways (energy build-up)
- Sudden strong move happens

That strong move is the **springboard**.

⚠ We are NOT trading it yet. We are only **training the eyes**.

Day 1 Homework (Chart-Based)

📌 Mandatory Practice

- 1 Open **Daily** timeframe
- 2 Pick **any one stock / index**
- 3 Mark:

- ● Two support zones
- ● Two resistance zones

- 4 For each level, note:

- How many times price reacted?

- Bounce or rejection?
- Strong or weak reaction?

✗ No indicators

✗ No entry thinking

Only **observation**

Day 1 Golden Rule

“First learn to **see levels**. Then learn to trade reactions.”
