If you have any doubts about your financial suitability for trading, please seek professional advice from a financial planner.

I have given the strategy a new name.

I will call the 8th bar the “8 Ball”, and I will call the 13th bar the “Teenager”.

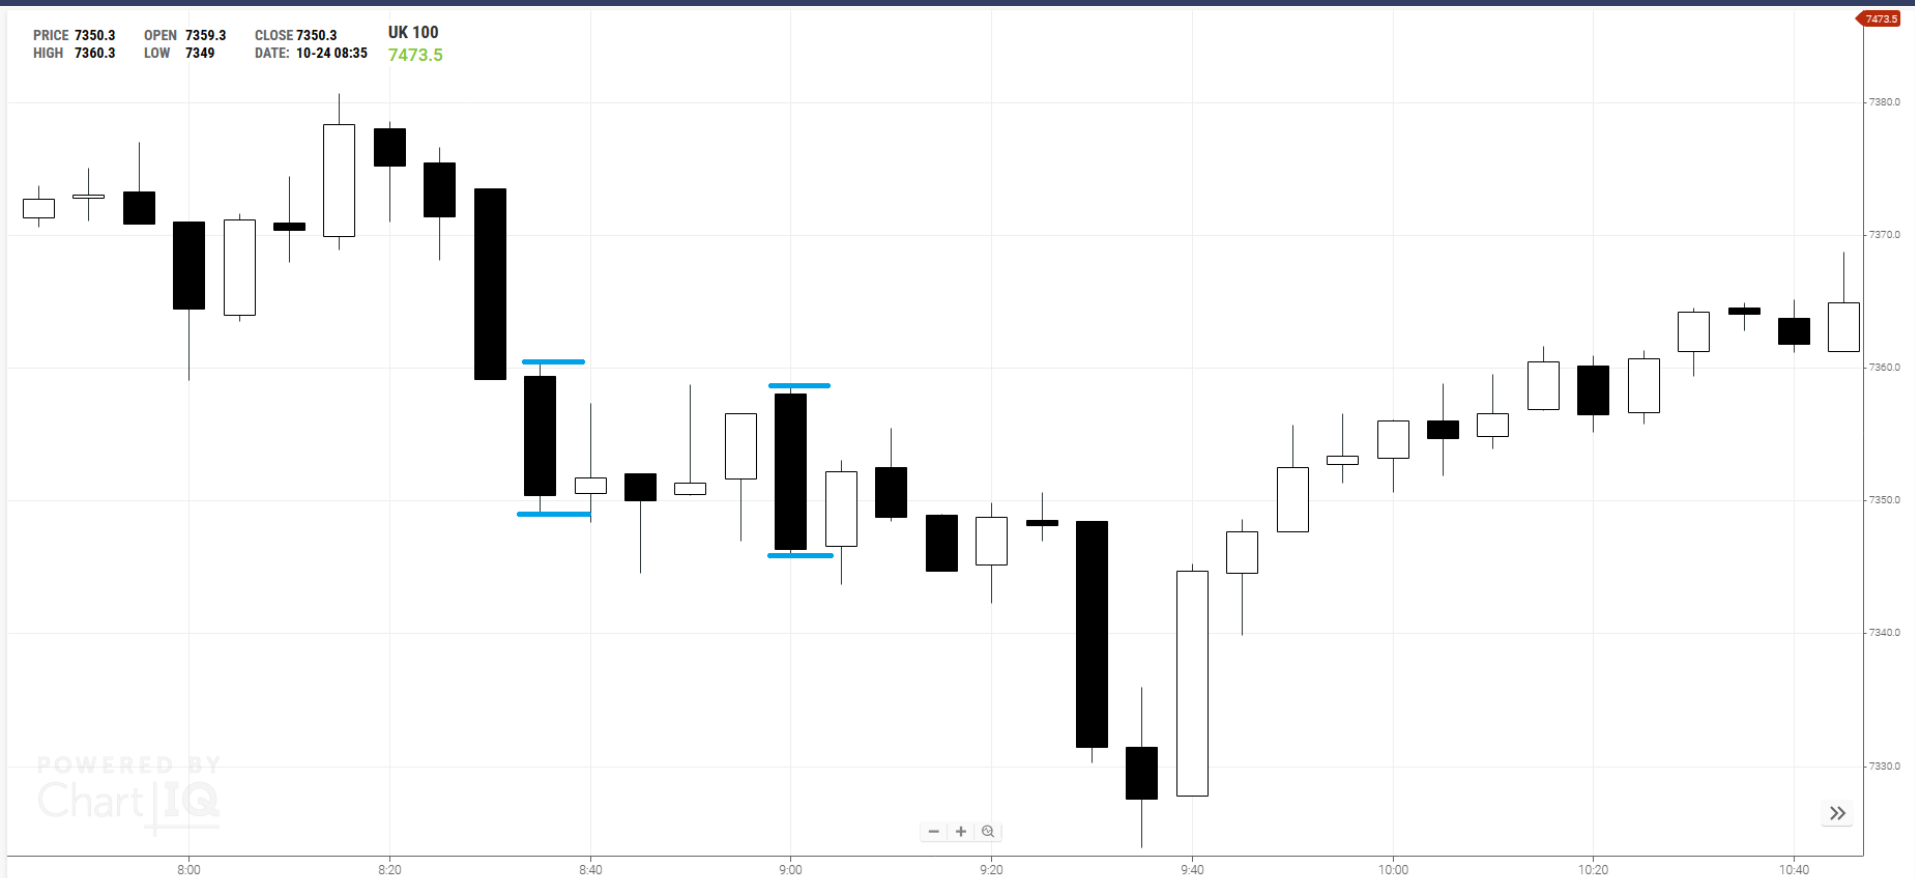

If you have a better name, let me know.

The charts prior to this slide was from before the speech. Remember that “8 Ball” and “Teenager” is not dependent on the 1st bar’s colour.

Now I will go through every day since the talk in London’s IX show.

If you flipped the switch, it is a different story.

UK 100

7469.8

1st bar is positive. It paid off for a scalp to buy below prior bar low, but that is not my statistical edge yet.

60.2

8th

56.7

57.2

13th

51.6

57.6

49.2

I am ALWAYS looking to optime my entries and stop loss. Look at the 13th bar, and notice how you are triggered into short trade. Do we flip the switch? Do we move stop loss above high of bar that triggers us short, in which case I can shave off 4 points on my stop loss. I hope to answer these questions with you and for you over the coming months.

IX SHOW LONDON 24 NOVEMBER 2023

WHY 8 and 13

I know the Fibonacci believers will see this as proof of my closet fascination with mystical numbers 😊. However, perhaps there is a more pragmatic sense to it. The 8th bar is the time when much of the early rush is done, akin to School Run Strategy, and the 13th marks the end of the first hour.

I didn't pick them because of Fib. I picked them because my research said these times had high probability of producing a profitable outcome.

Don't get me started on all the numbers that DIDN'T work 😂😂😂

I hope you don't mind sharing in here. I just want you to get value and feel it was worth attending. That is very important to me.

 334 12:05

IX SHOW LONDON 24 NOVEMBER 2023

PS

I had a great questions from Keith.

Tom, do you consider 8 and 13 every day, or just when the 1st bar is negative.

I consider them every day.

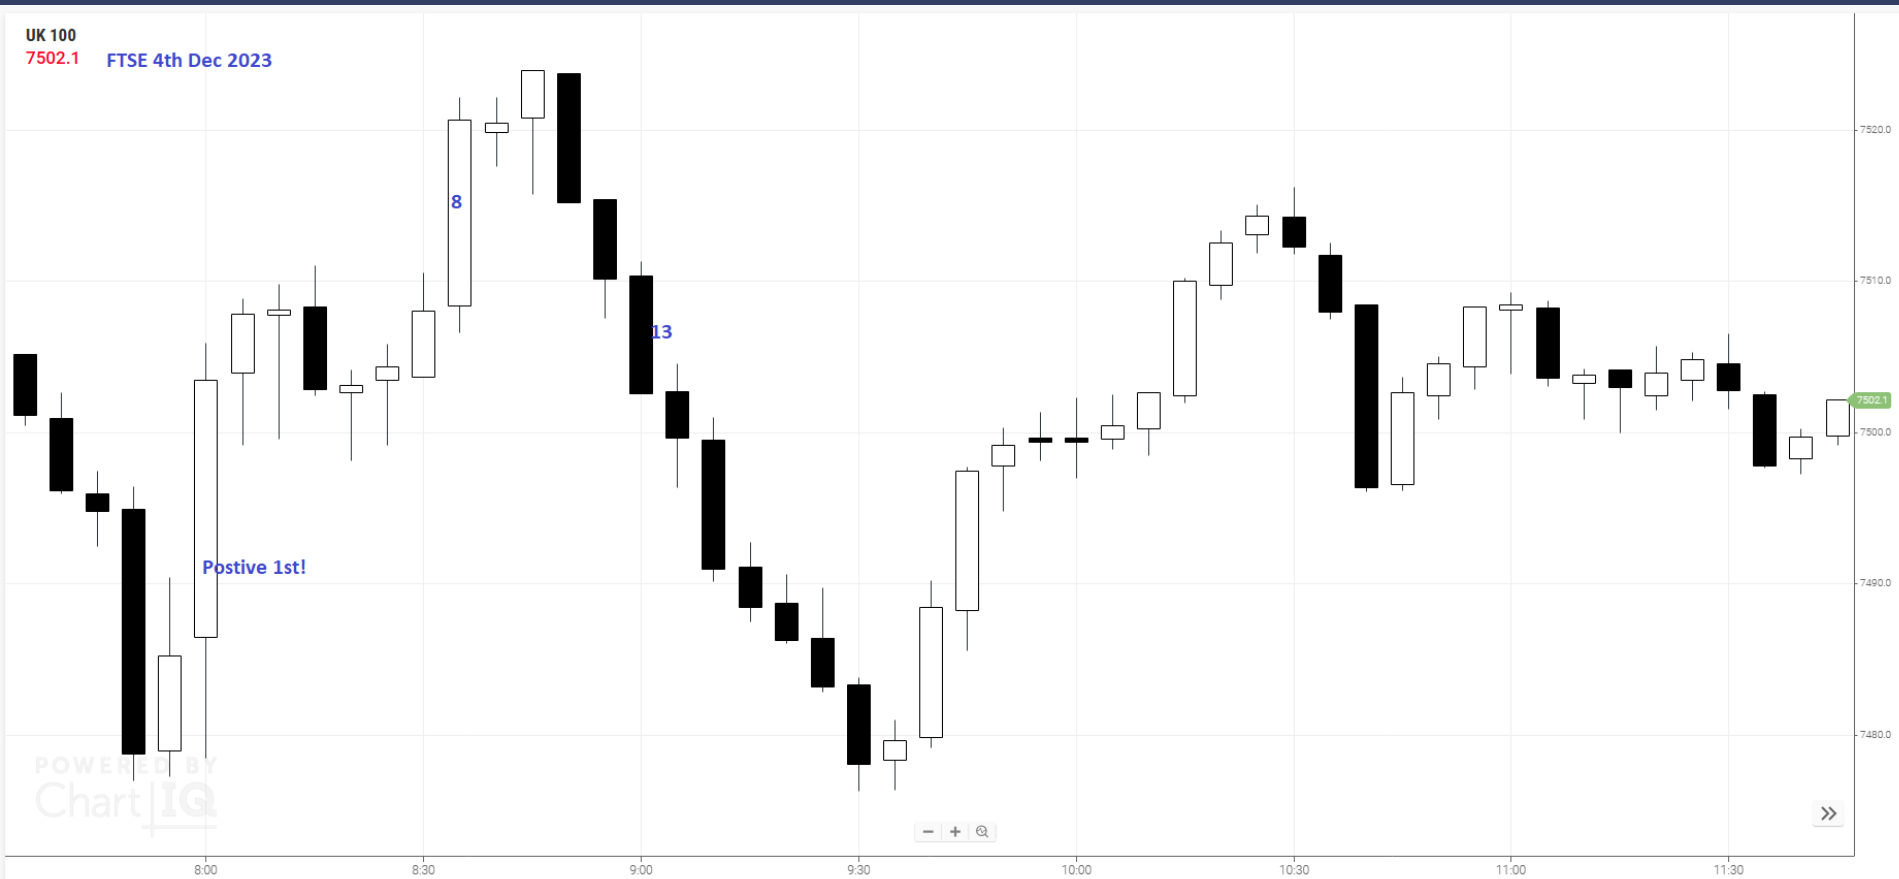

I have to warn you though, that when FTSE does that "I am not moving at all", then 8 and 13 becomes very dangerous to trade...

 330 12:10

Monday the 1st of December: The reason I wanted to take pen to paper was to talk about today's 8 Ball. I didn't take that trade because the range of the 8th was so large. Ignoring the 1st min of the day, the subsequent candles had a range of 7 to 11 points. Then 8 Ball happens, and it is 16. I felt it was too much. Even if you used a 2-point offset, you would have been filled (7522.1 vs 7523.9 high) because of spread. Always mind your risk.

When you study the charts of the last 36 pages, it becomes clearer what setups work well and which ones doesn't.

For example, [slide 15](#) is an extremely large bar, and [slide 16](#) is an extremely small bar.

The best results comes from bars where the range is orderly, compared to previous bars. Take for example Bar 13 today, it is orderly, and contextually aligned with previous bars.

OK. Enough for now.

Season's Greetings
