

INTRADAY TRADING IN INDICES USING PIVOTS. VERSION 5 (UPGRADE)

Key changes :
Classification of Strategies
Addition of Strategies
Other cosmetic changes.

Halan Manoj Kumar

Trading Disclaimer

All TRADING involves high risk and YOU can LOSE a substantial amount of money, no matter what method you use. past performance is not necessarily indicative of future results.

The contents of these slides are intended For Educational Use Only – Not To Be Utilized As Trading Advice.

- I am not a SEBI registered advisor.
- I am a part time trader.
- I am working at a Bank abroad as a Financial Risk Manager.
- I have been trading the markets on a very serious note since the last 8 years, of course on a part time basis.
- I haven't yet moved towards full time on account of family related commitments and issues.
- I predominantly use pivots for my trading decisions. I mostly trade Bank nifty / Nifty on an intraday basis.
- Frank Ochoa's 'Secrets of Pivot Boss' was the eye-opener for me. I am also a member of Frank Ochoa's Pivot Masters program.
- I have tweaked the concepts to align with Indian Markets . I HAVE ADDED MY OWN TESTED PIVOT BASED CONCEPTS WHICH IS NOT USED ANYWHERE IN THE TRADING WORLD.
- This is an attempt to teach my experiences of trading Bank nifty AND nifty to other traders. The concepts can also be used in Stocks though I have not specifically tested.
- The concepts are not Holy Grail. Hence these concepts should be accompanied with proper Risk Management.

WHO AM I?

AGENDA

- Market Mechanism
- 5 important Price Action Setups
- Introduction to Pivots
- Introduction to Camarilla Pivots
- Key levels
- Important applications of Pivots
- ADMIN indicator
- Trading Setups
- Putting it all together
- Tools
- Setup in Trading View and Amibroker.

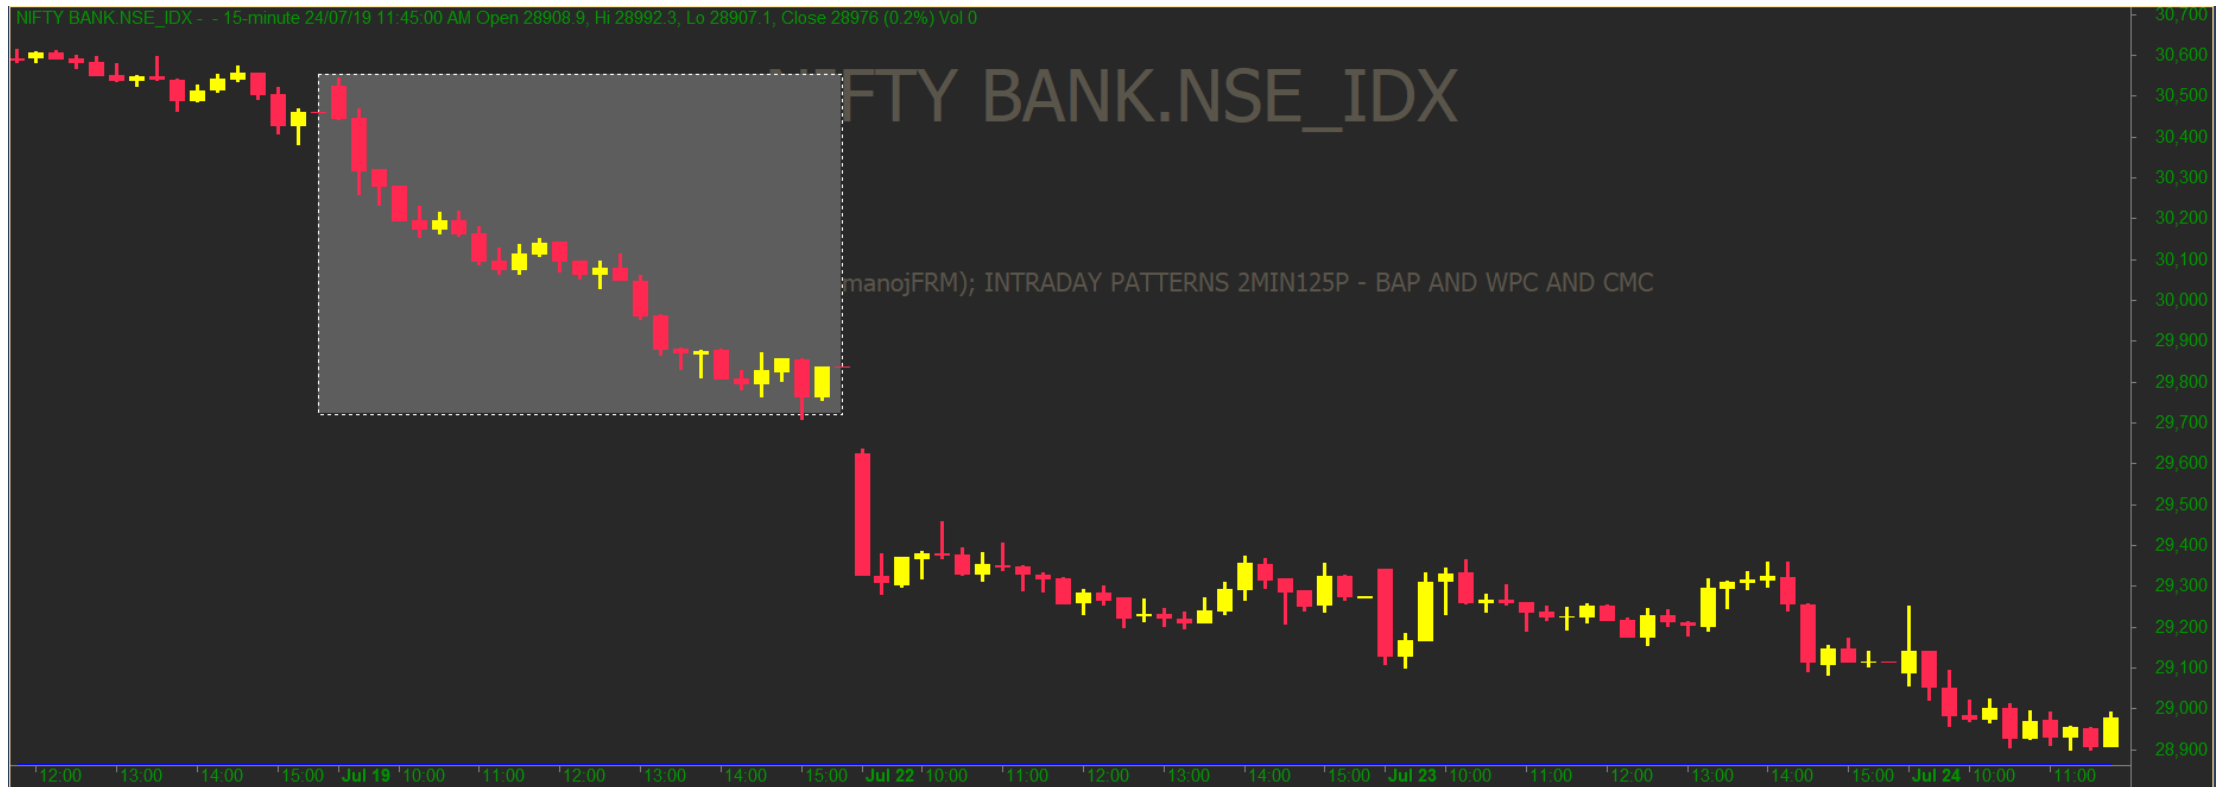

I) MARKET MECHANISM

- Market – Trade between buyers and sellers
- Each trade between buyer and seller leads to a market move that is random in nature. But there is an orderliness in the randomness. This is how patterns develop.
- Patterns repeat but not precisely.
- Type of buyers and Sellers
 - Initiative buyer
 - Enters when price is at value or above value
 - Initiative seller
 - Enters when price is at value or below value
 - Responsive buyer
 - Enters when price is below value
 - Responsive seller
 - Enters when price is above value

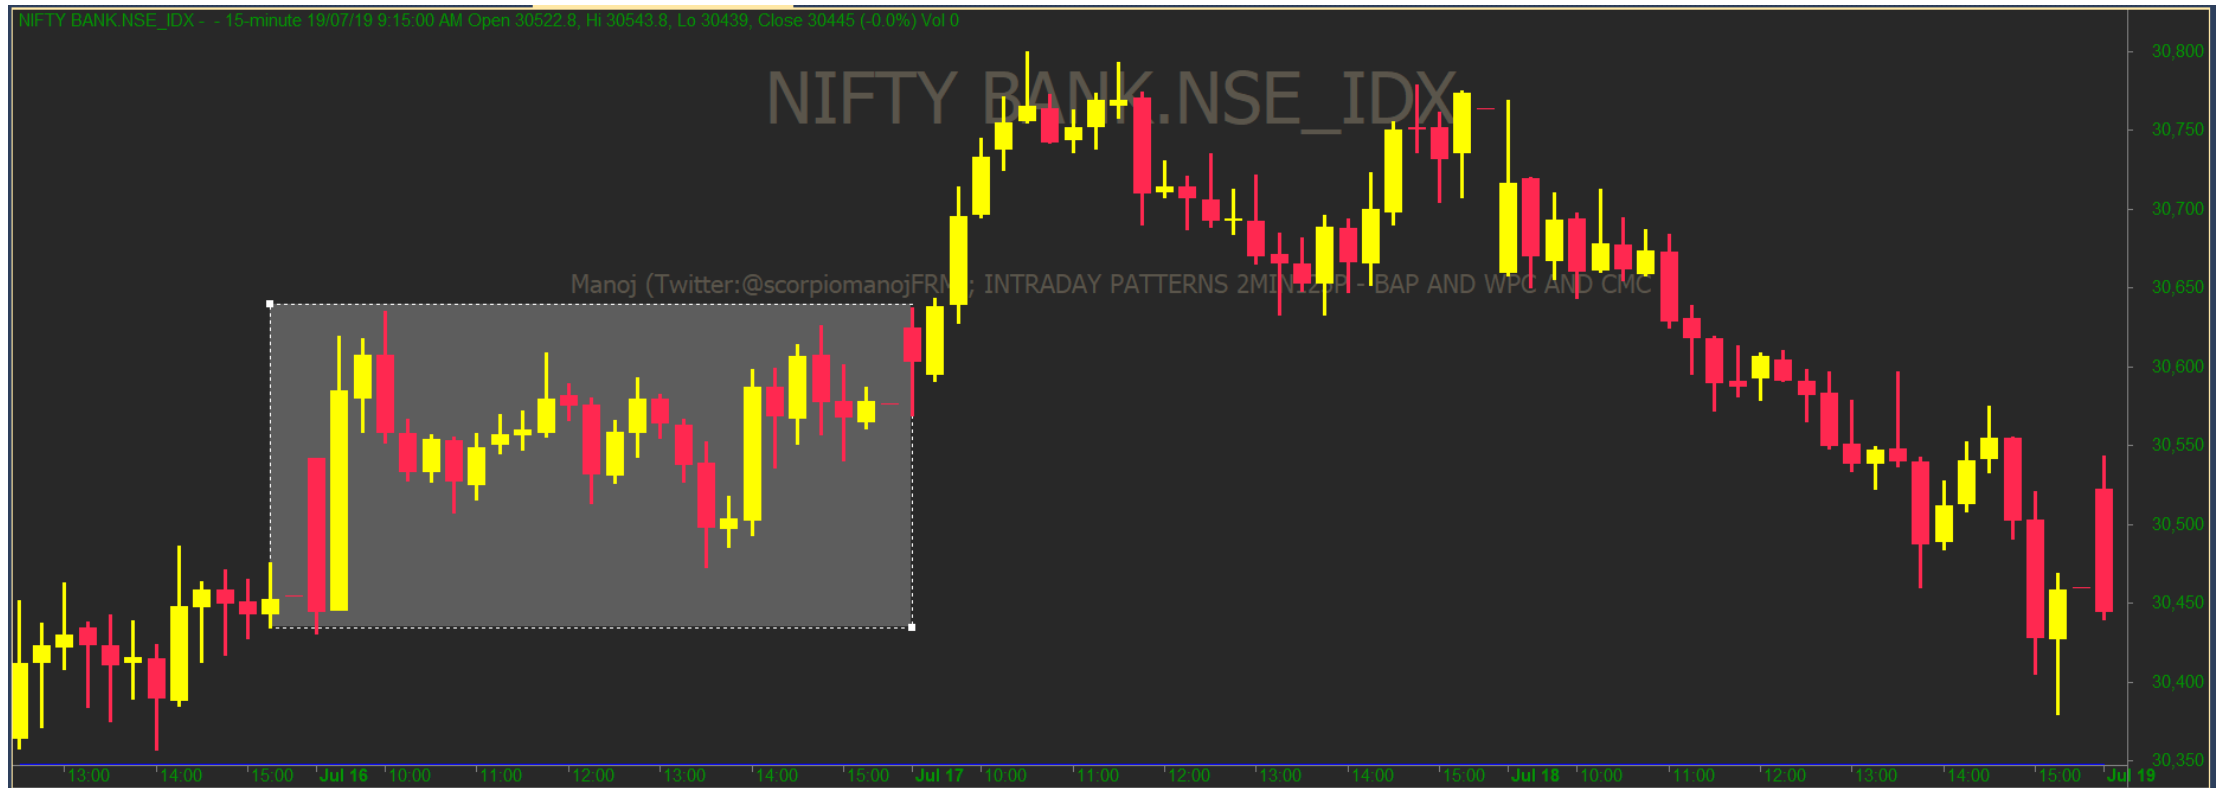

MARKET MECHANISM (contd.../-)

- Determining Value
 - Pivots
 - Other techniques – Market profile / Oscillators / MAs, etc
- Market day types
 - Trend day
 - Usually created by open high or open low or bullish pin bar that sustains for atleast 15 min of the start of trading session.
 - Caused by initiative buyers and sellers
 - Range day
 - Usually happens when there are visible resistances and supports above the price.
 - Caused by responsive buyers and sellers
 - RTR / RT
 - Starts the first 1/3rd of the session with a range, the next 1/3rd with a trend and the final 1/3rd with a range OR range – trend OR trend – range sessions.
 - Caused by a mix or responsive / Initiative buyers and seller.

MARKET MECHANISM – Trend day

MARKET MECHANISM – Range Day

MARKET MECHANISM – RTR day

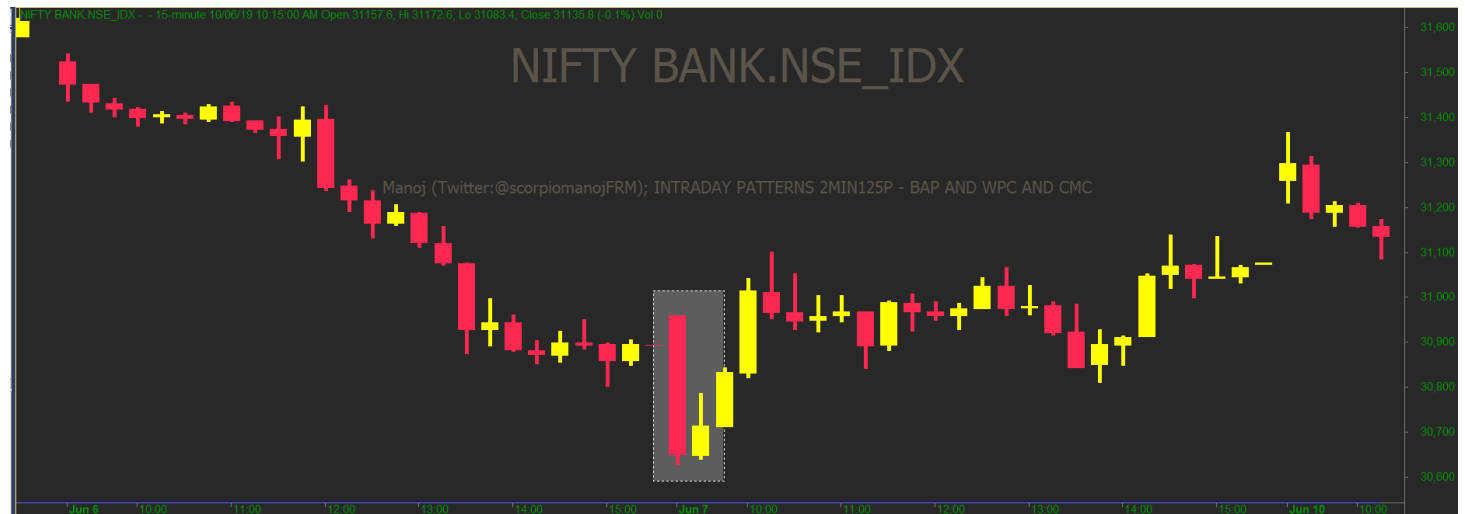

II) 5P – FIVE IMPORTANT PRICE ACTION SETUPS

- Price Action Setups reliability increases as the time frame increases. Price Action Setups at KEY LEVELS are extremely powerful which should be watched out for.
 - Extreme Reversal Setup (ERS)
 - Pin Bar (PB)
 - Outside Reversal Setup (ORS)
 - Open High / Open Low (OH/OL)
 - STMHL / ITMHL

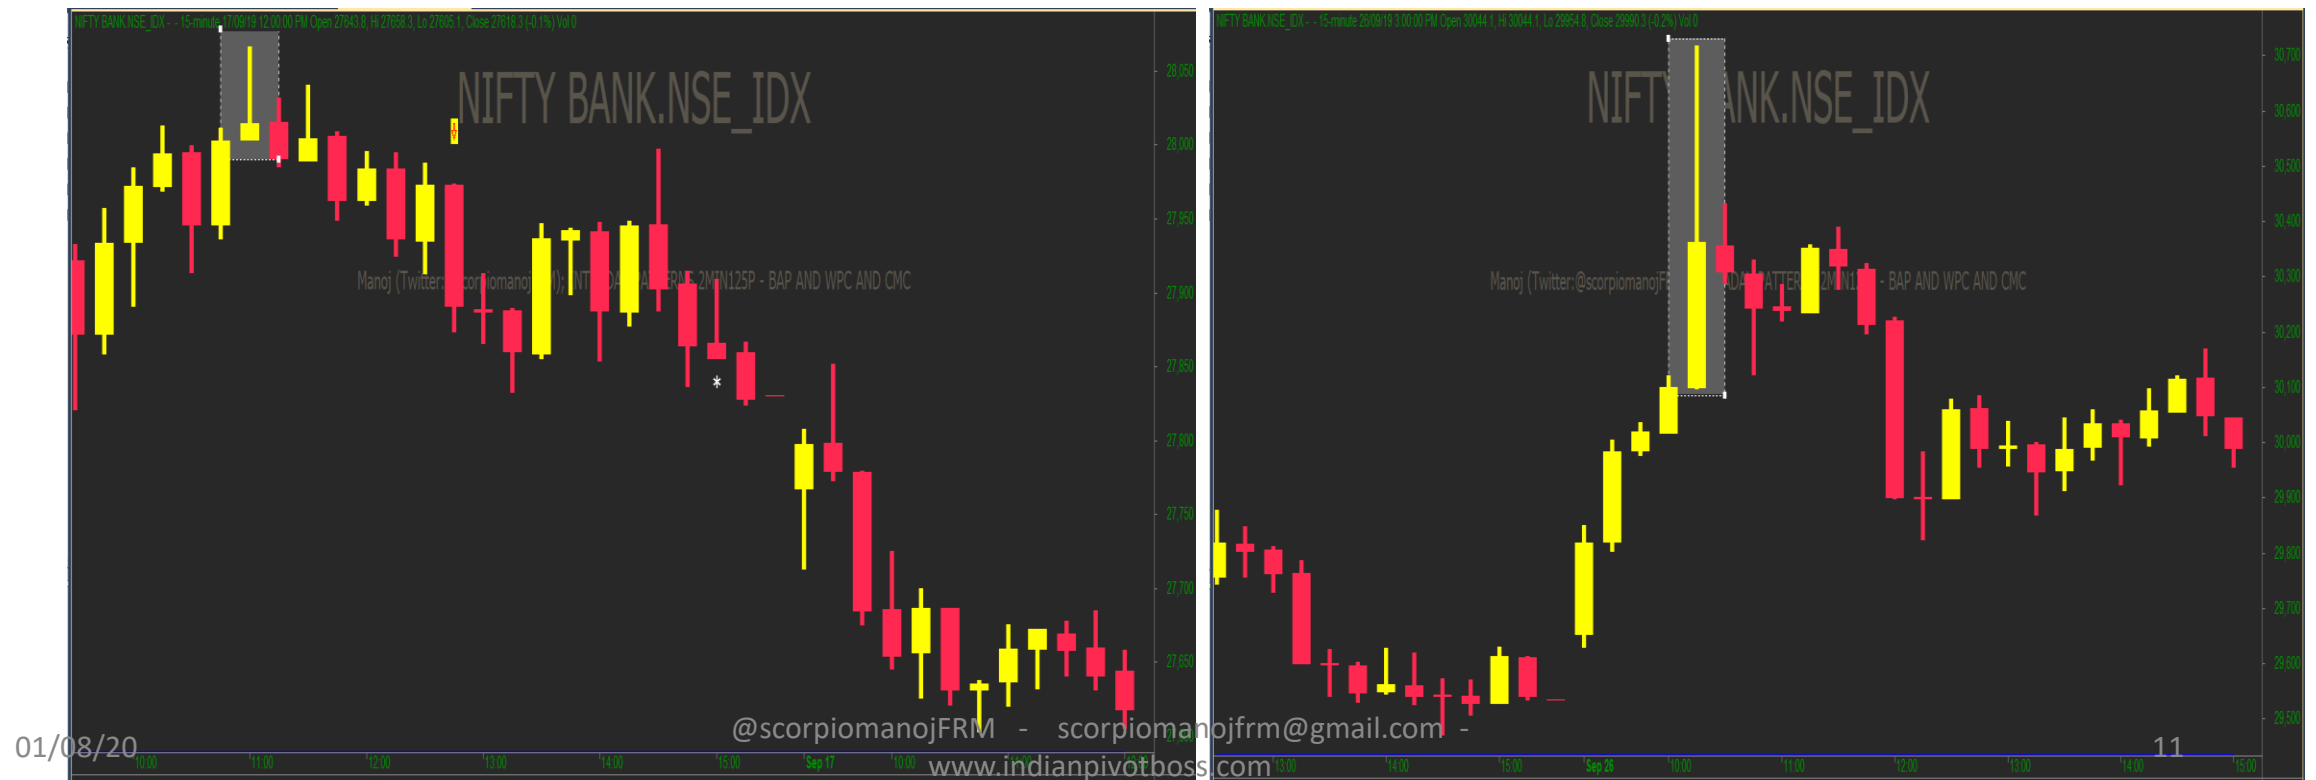

Extreme Reversal Setup (ERS)

- 1st bar > 2x the average size of the candles for the past, say, 10-20 periods.
- Body of the 1st bar > 50% of the bar's total range but < 85% of the bar's total range.
- 2nd bar of the candle is the opposite of the first.
- Preferred time frame is 5 to 15 min for intraday setups.

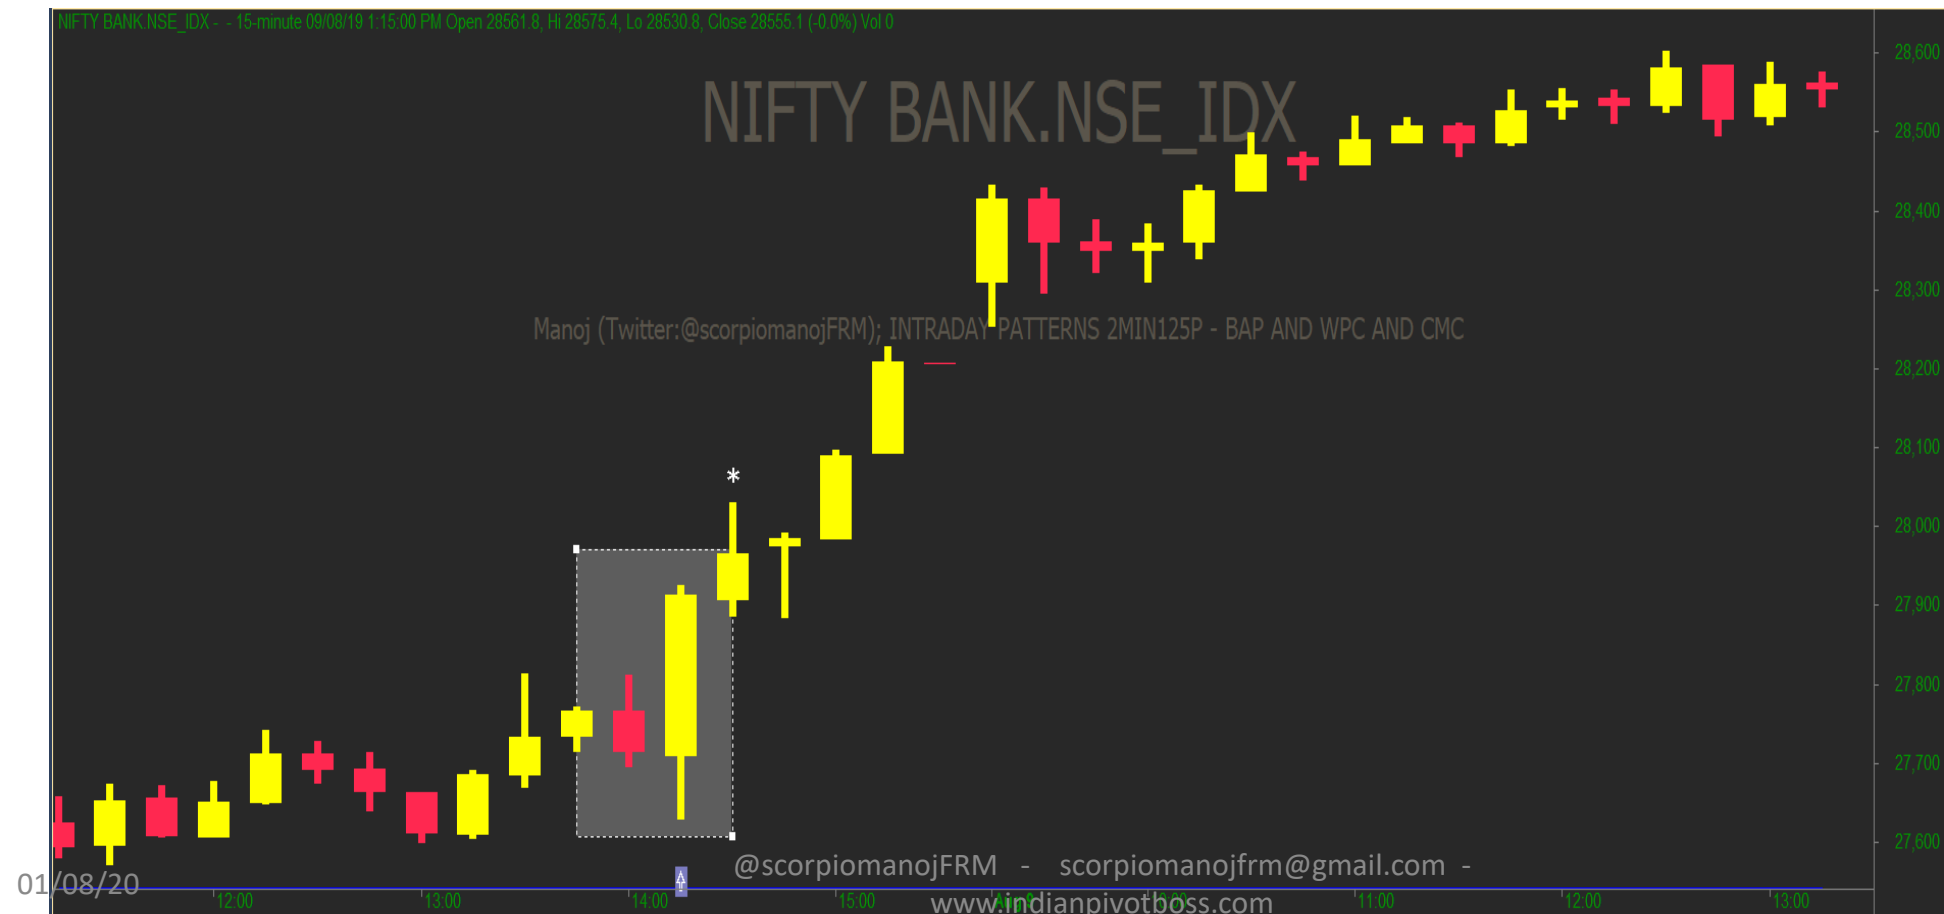

Pin Bar (PB)

- Long wick at bottom and short body at top.
- Long wick at top and short body at bottom.

Outside Reversal Setup (ORS)

- Second Bar fully engulfing the previous bar with opposing candle.

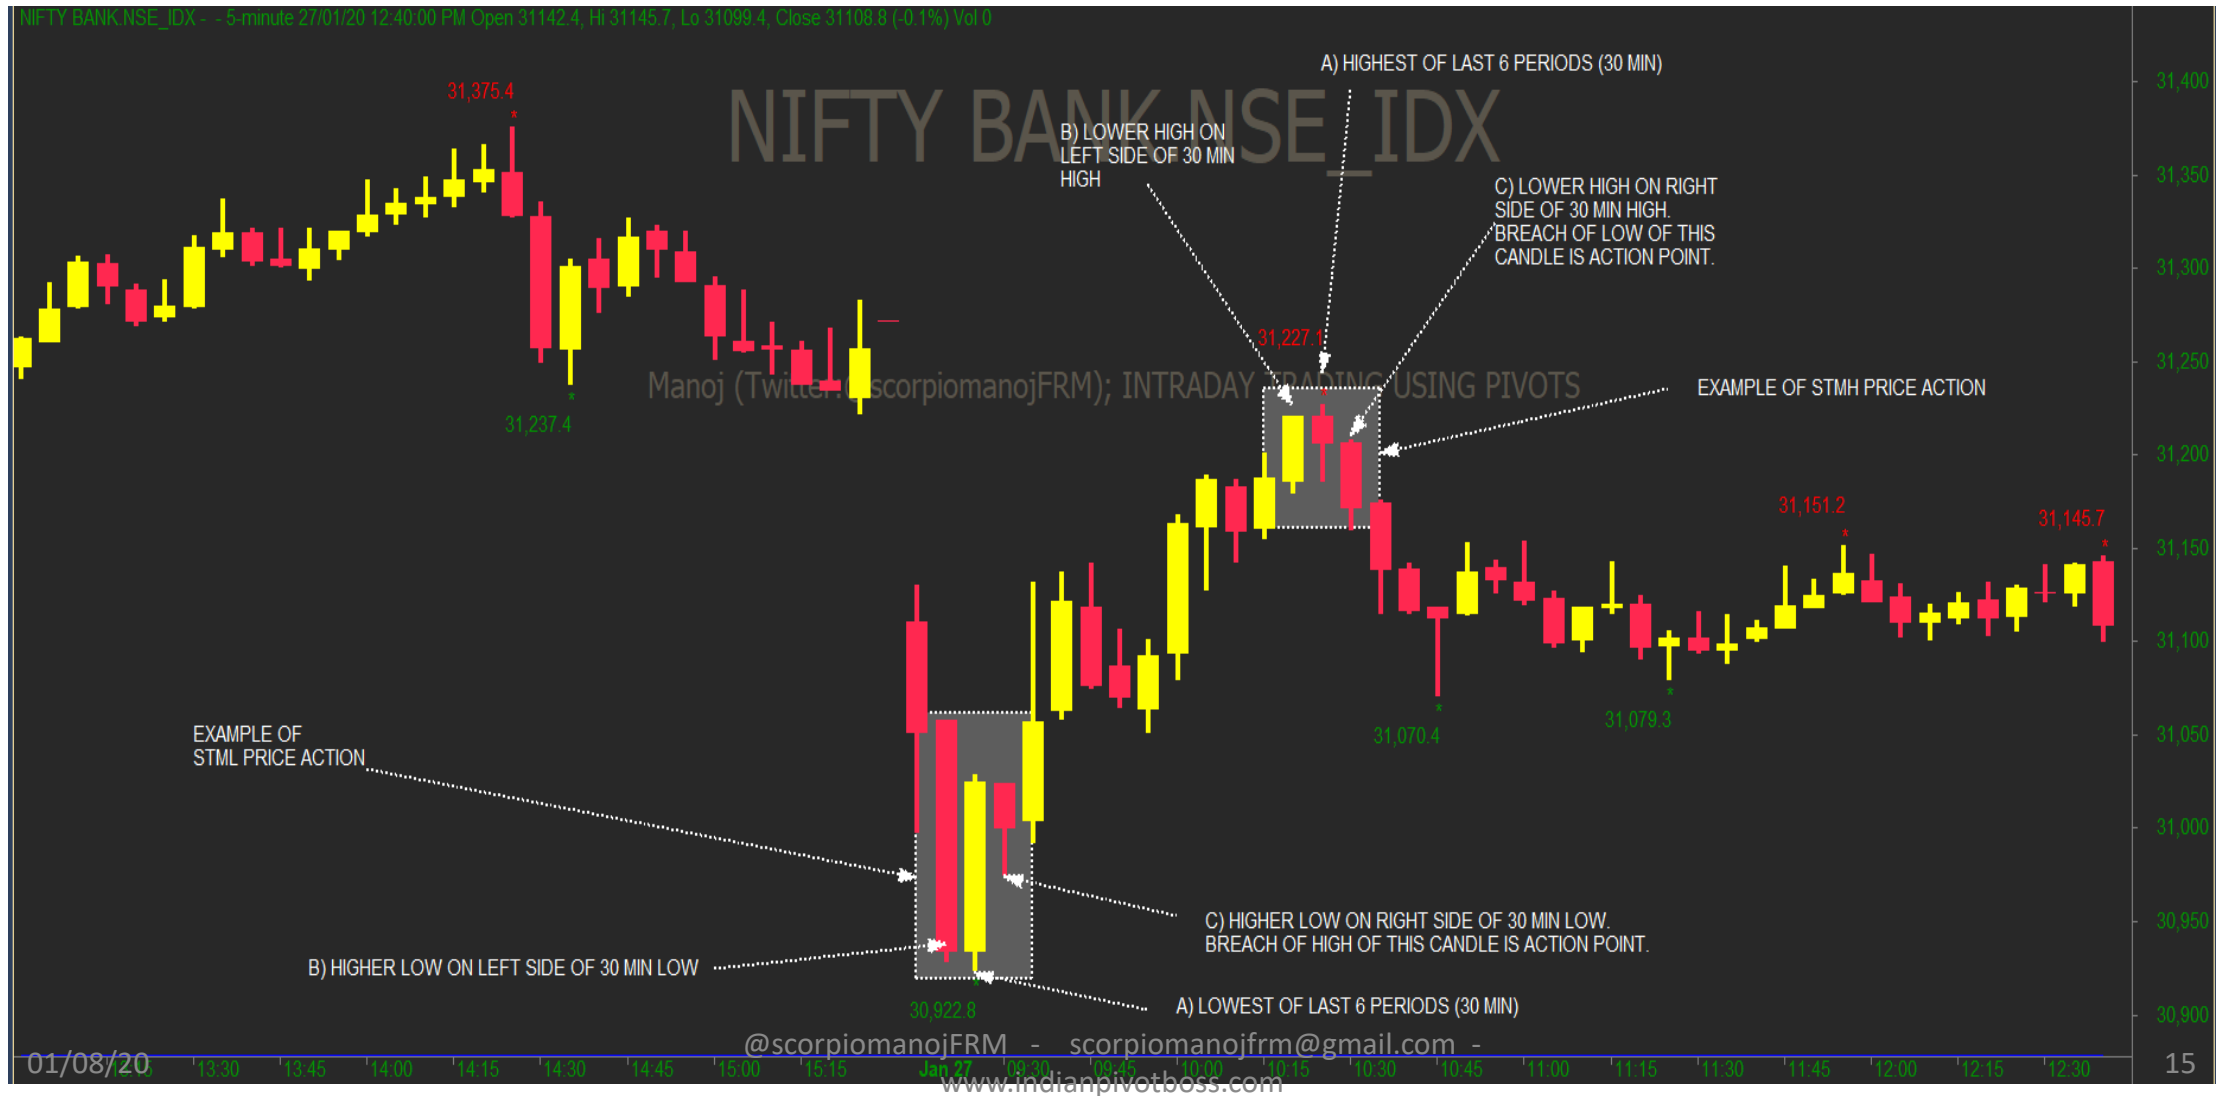

OPEN HIGH / OPEN LOW

STMHL (Short Term Market High Low)

- A low with higher lows on both sides creates a short term market low (STML) . Similarly a high with lower highs on both sides creates a short term market high (STMH).
- To determine the low or high you need to have a period for that low or high. For intraday trading using 5 min chart 30 min (6 period) is the ideal period to determine low or high. In other words STML would be a 30 min low with higher low on both sides; STMH would be a 30 min high with a lower high on both sides. There is no hard and fast rule for the period. For 1 min chart trading, 5/15 min can be High / Low can be used for determining STML and STMH. **INSIDE DAYS ARE NOT CONSIDERED IN THIS PATTERN.**
- Steps for STMH (Opposite is for STML)
 - Determine time period (minimum 30 minute or minimum 6 period if trading 5 min chart).
 - A – Identify minimum 30 minute high points.
 - B – Mark if there is any lower high preceding A. Else skip A.
 - C – Mark if there is any lower high after A. Else skip A and B.
 - BAC – STMH price action.
 - **STMH WILL BE KNOWN ONLY AFTER C IS COMPLETE.**
 - **SO POINT OF ACTION STARTS ON BREAK OF LOW OF C.**
- STMH emanates from the concept that markets has created a short term high and absence of followup buying fails to create a new high. Similar logic holds good for STML as well.
- **THIS PRICE ACTION APPEARS INITIALLY DIFFICULT TO MASTER. BUT ONCE YOU GET HOLD OF THIS, THIS PATTERN WORKS BEAUTIFULLY AT KEY LEVELS.**

STMH / STML (contd...)

STMH / STML (contd...)

ITMHL (Intermediate term Market High/Low)

- Concept similar to STMH / STML.
- Extension of STMH / STML.
- ITMH has lower STMH on both sides. Similarly ITML has higher STML on both sides. The middle STMH is STMH(A), left STMH is STMH(B) and right STMH is STMH(C).
- Recall STMH has 30 min high with lower highs on both sides (BAC). So, ITMH has STMH(A) (which is nothing but 3 candles BAC) with two other lower STMH(B) on left hand side and STMH(C) on right hand side.
- Point of Action will be the breach of ITMH (C) which is nothing but STMH (C)

ITMH / ITML (contd...)

III) INTRODUCTION TO PIVOTS

- $R4 = R3 + (R2 - R1)$
- $R3 = R1 + (H - L)$
- $R2 = P + (H - L)$
- $R1 = 2 \times P - L$
- $TC = (P - BC) + P$
- $P = (H + L + C)/3$
- $BC = (H + L)/2$
- $S1 = 2 \times P - H$
- $S2 = P - (H - L)$
- $S3 = S1 - (H - L)$
- $S4 = S3 - (S1 - S2)$

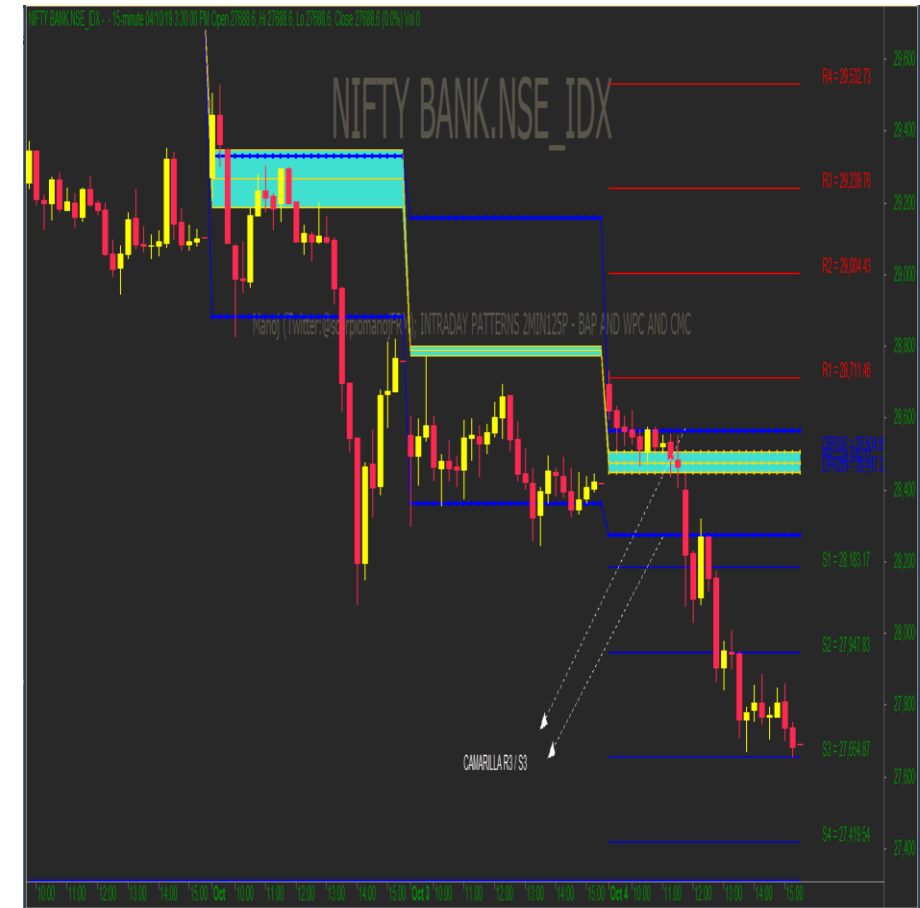

INTRODUCTION TO PIVOTS – THE EDGE

- Market generated – Based on Previous session H,L,C
- Leading indicator – As it is based on most recent session's price behavior; can be used to identify the undertone of the market well in advance; can be used to assess the possible market type well in advance.
- Scalability – Can be applied to any timeframes and to any markets.

IV) INTRODUCTION TO CAMARILLA PIVOTS

- P, BC and TC same as normal Pivots
- R1/R2/R3/R4, S1/S2/S3/S4 varies.
- Our main focus is on R3 and S3
- $R3 = \text{Close} + (H - L) \times 1.1/4$
- $S3 = \text{Close} - (H - L) \times 1.1/4$
- Pivots can be lower than Camarilla one or all supports
 - Indicates a possible positive bias
- Pivots can also be higher than one or all resistances
 - Indicates a possible negative bias

V) KEY LEVELS

- Previous session levels (PDH,PDL,PWH,PWL,PMH,PML)
- Pivots (Daily / weekly / monthly / yearly CPR)
- Special Pivots (2 day CPR)
- Camarilla Pivots (R3 / S3)
- Virgin Pivots (Previous CPR not touched by price so far)
- EMA (200 day EMA and 200 period EMA, 50 period EMA)
- HTF support and resistance zones

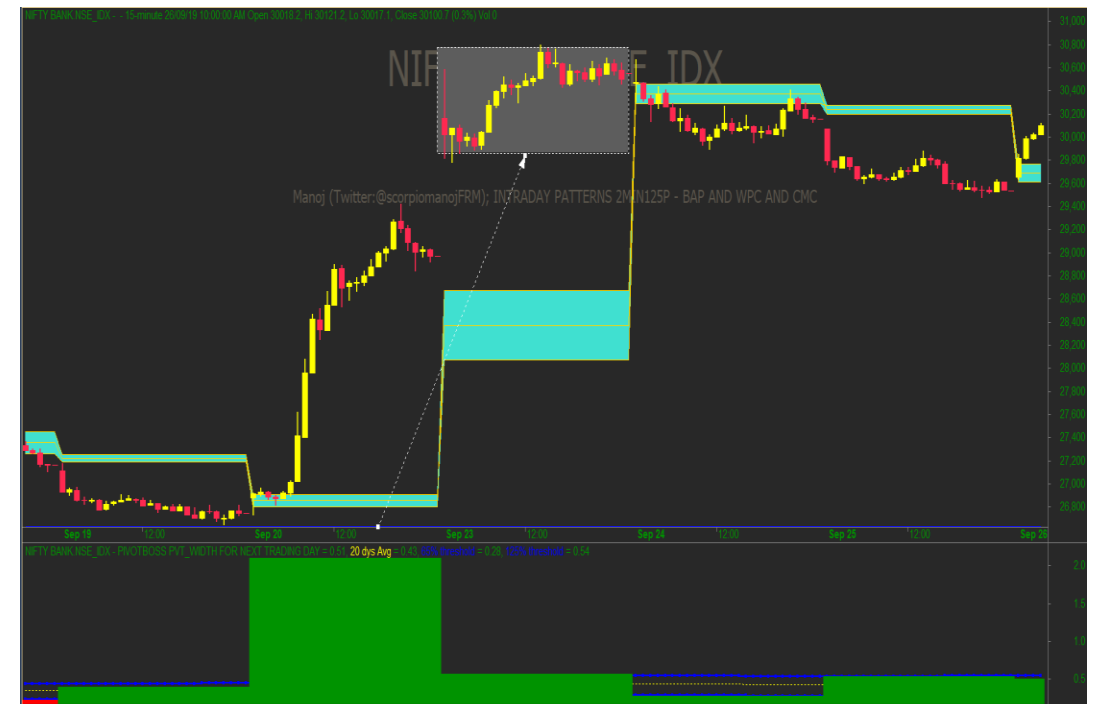

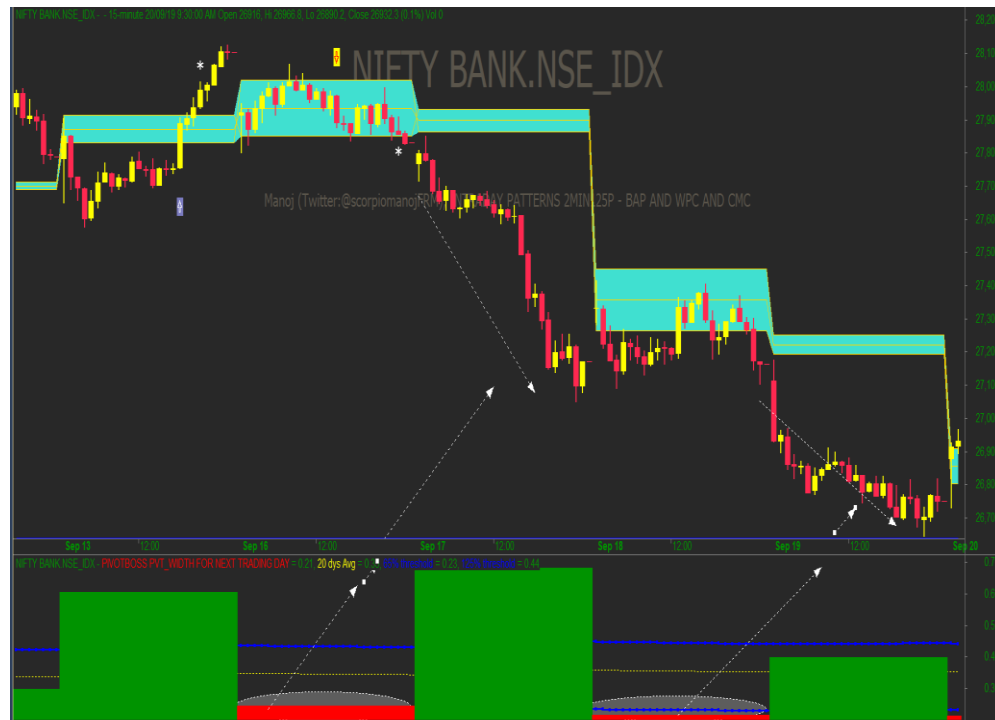

VI) APPLICATIONS OF PIVOTS

- Forecasting price direction and price behavior with high degree of accuracy.
- Allows you to anticipate and plan for upcoming opportunities.
- Tools used :
 - Pivot width analysis – To assess if tomorrow's movement would be range bound / trending.
 - Pivot Trend analysis – To assess if the market is uptrending / downtrending / sideways.
 - 1day 2day pivot relationship – To assess if the market is uptrending / downtrending / sideways.
 - Pivot Based Oscillator – To assess the momentum of the market.

VI) A) APPLICATION OF PIVOTS – PIVOT WIDTH ANALYSIS

- Pivot width = Distance between BC and TC expressed in terms of % , ie $(\max(bc,tc) - \min(bc,tc)) / \min(bc,tc)$
- Three types of Pivot width
 - Wide value
 - PW greater than 125% of last 20 days PW.
 - A possible trading range in the next session.
 - Narrow value
 - PW less than 65% of last 20 days PW.
 - A possible trending range in the next session.

APPLICATION OF PIVOTS – PW ANALYSIS

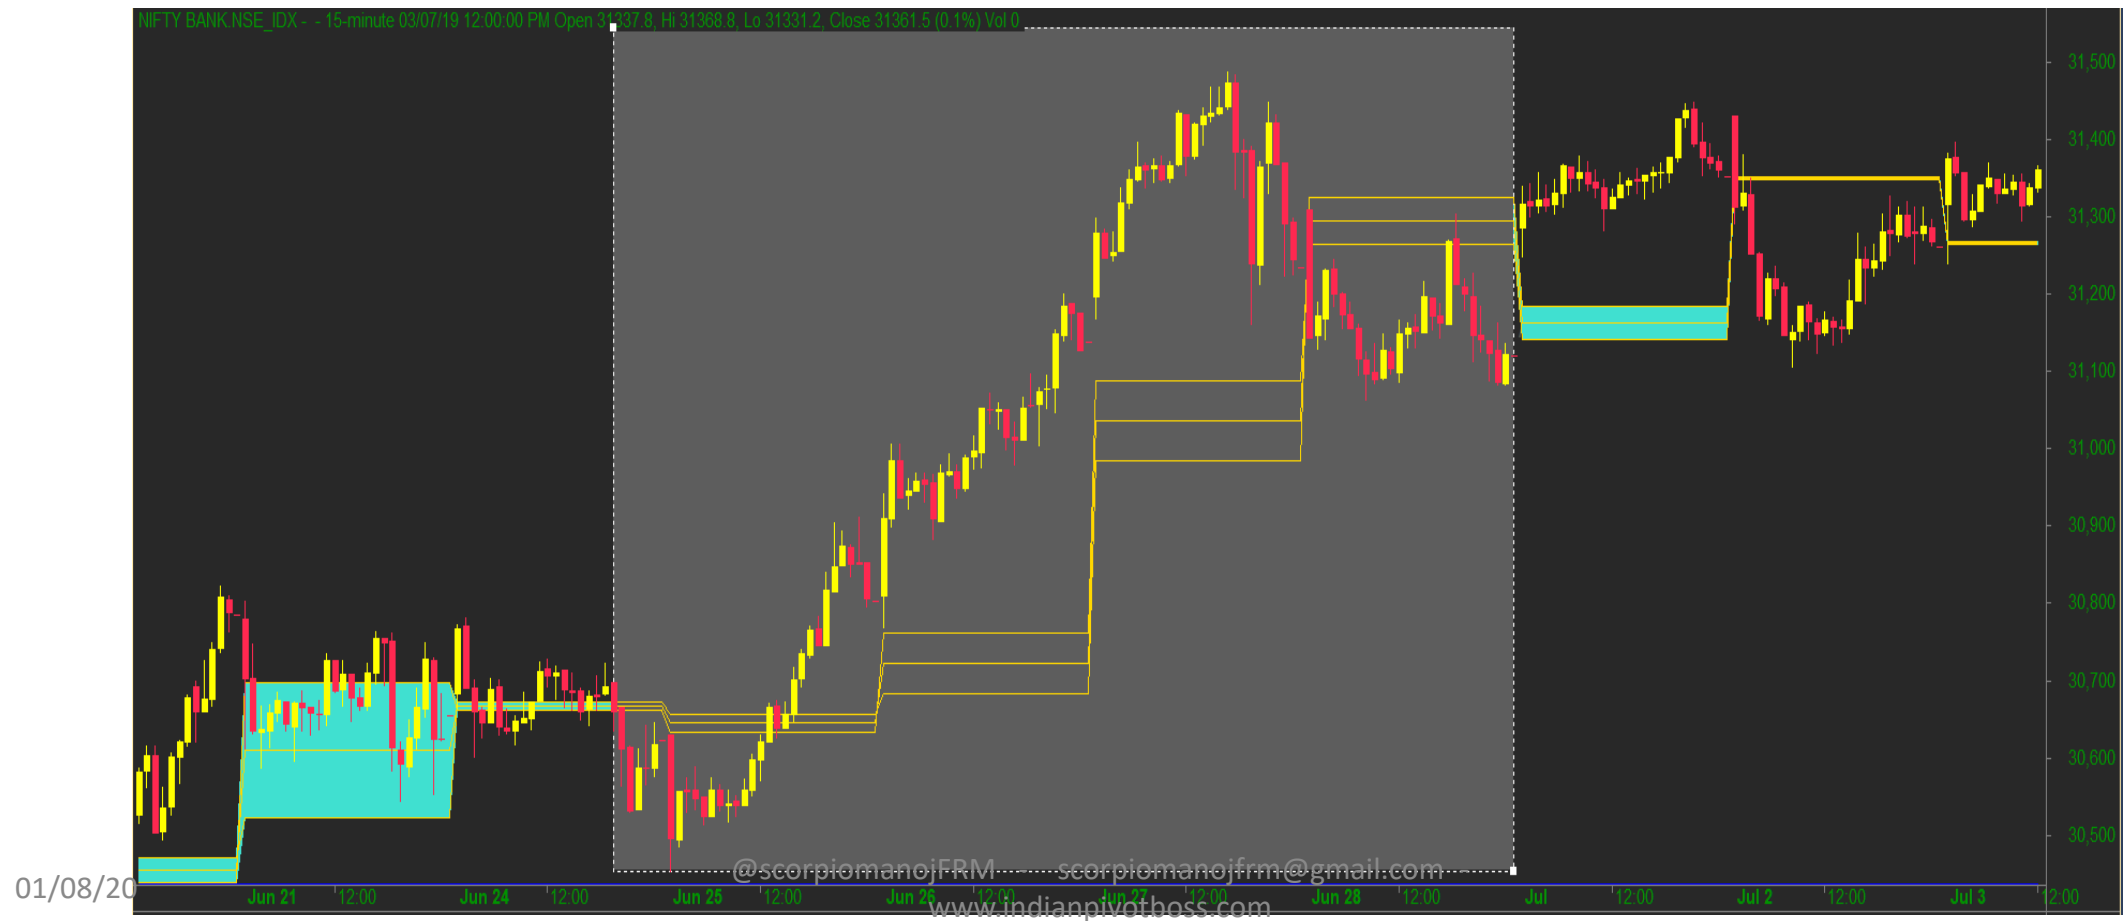

VI) B) APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS USING 1DAY PIVOT (TODAY'S AND TOM'S)

- Tomorrow's daily CPR compared with Today's daily CPR is called 2 day CPR relationship
- Enables to predict the likely direction of the market.
- Types of 2 day CPR relationship. Very important is the next day's open price needs to validate the prediction.
- The general rules of 2 day CPR relationship.
 - Higher Value – Bullish (if Opening above CPR)
 - Lower Value – Bearish (if Opening below CPR)
 - Overlapping higher value – Mildly bullish (if Opening above CPR)
 - Overlapping Lower value – Mildly bearish (if Opening below CPR)
 - Inside Value – Big move
 - Outside Value – Range bound move
- Types of 2 day CPR relationship. Very important is the next day's open price needs to validate the prediction.
- Long unwinding / Short covering rallies – If HV relationship, but if opening is below CPR, then there could be long unwindings which could lead to extended fall. Also, in HV relationship If during the day price crosses down CPR completely, there is a high possibility of an extended sell-off. Same concept applies to LV relationship with vice-versa explanation.

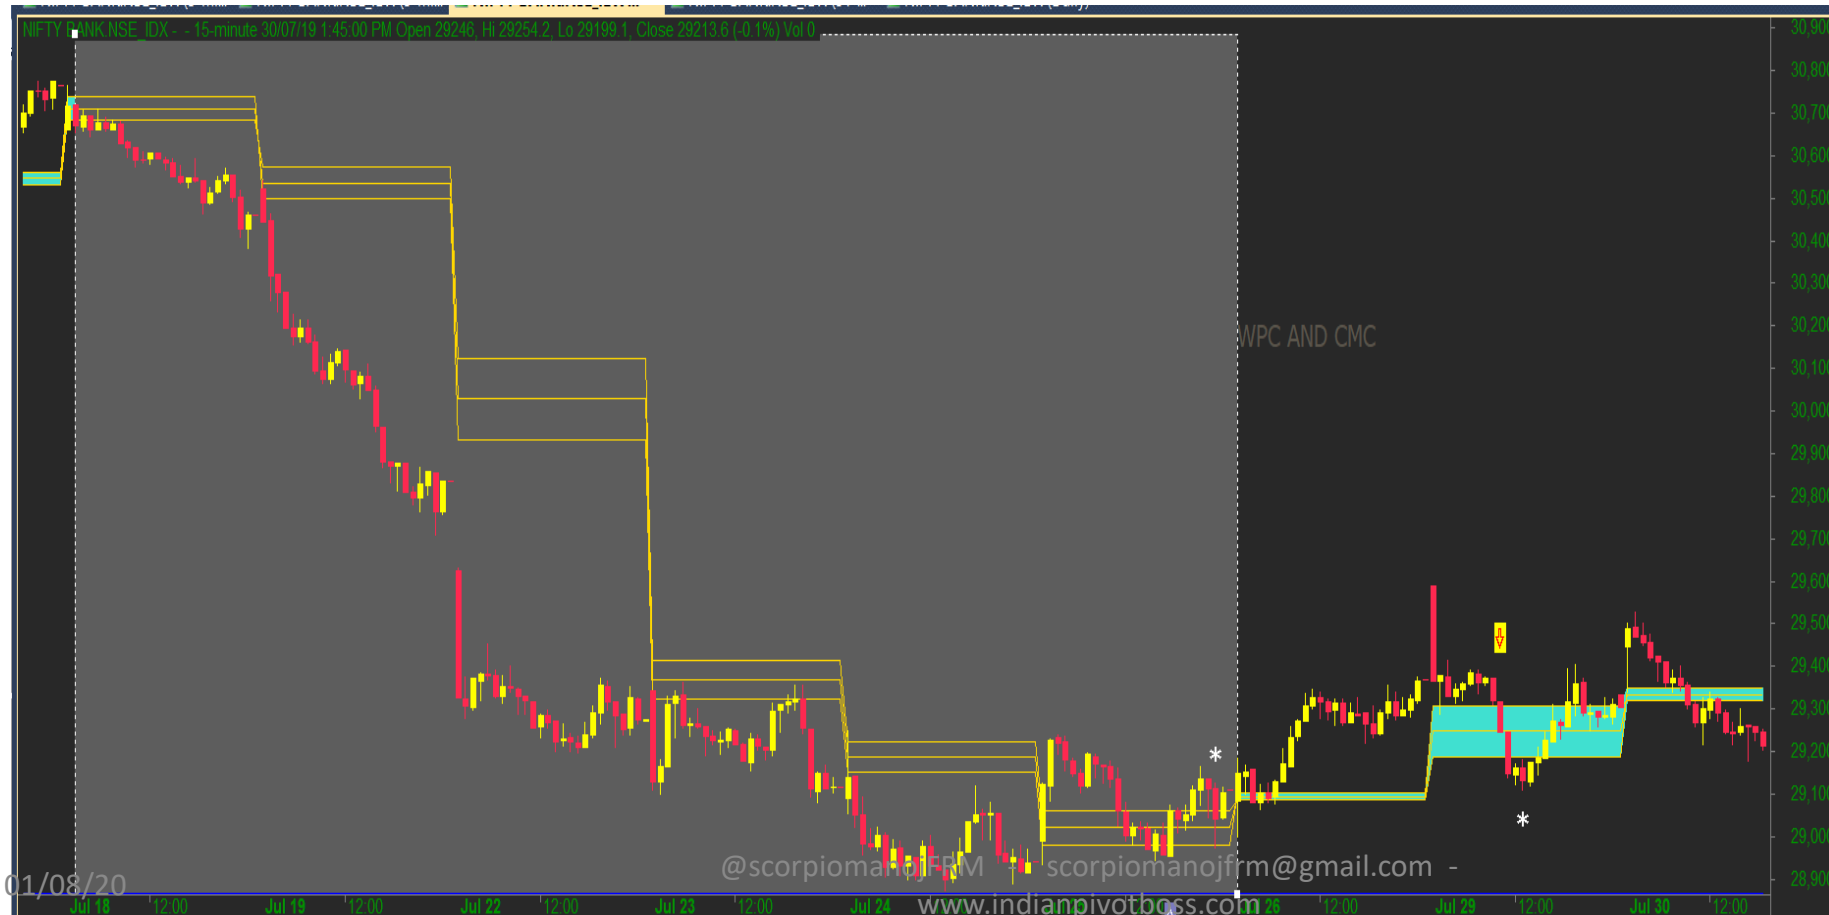

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS

- Higher Value

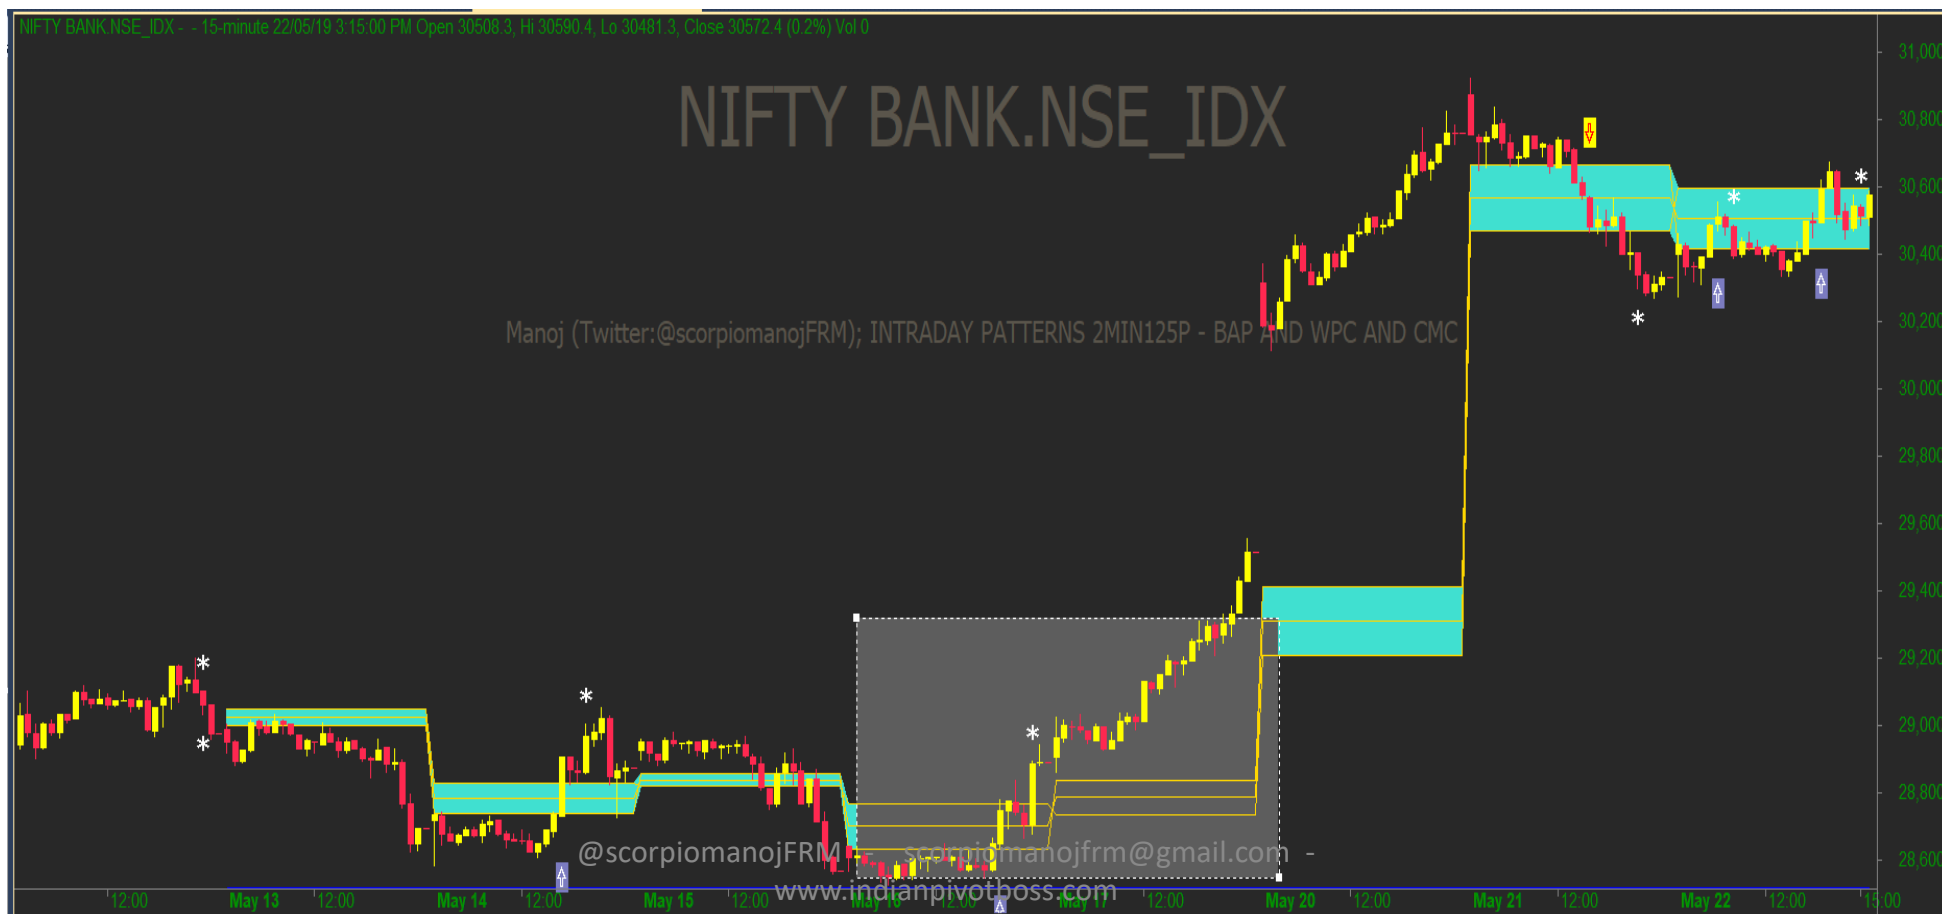

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS

- Lower Value

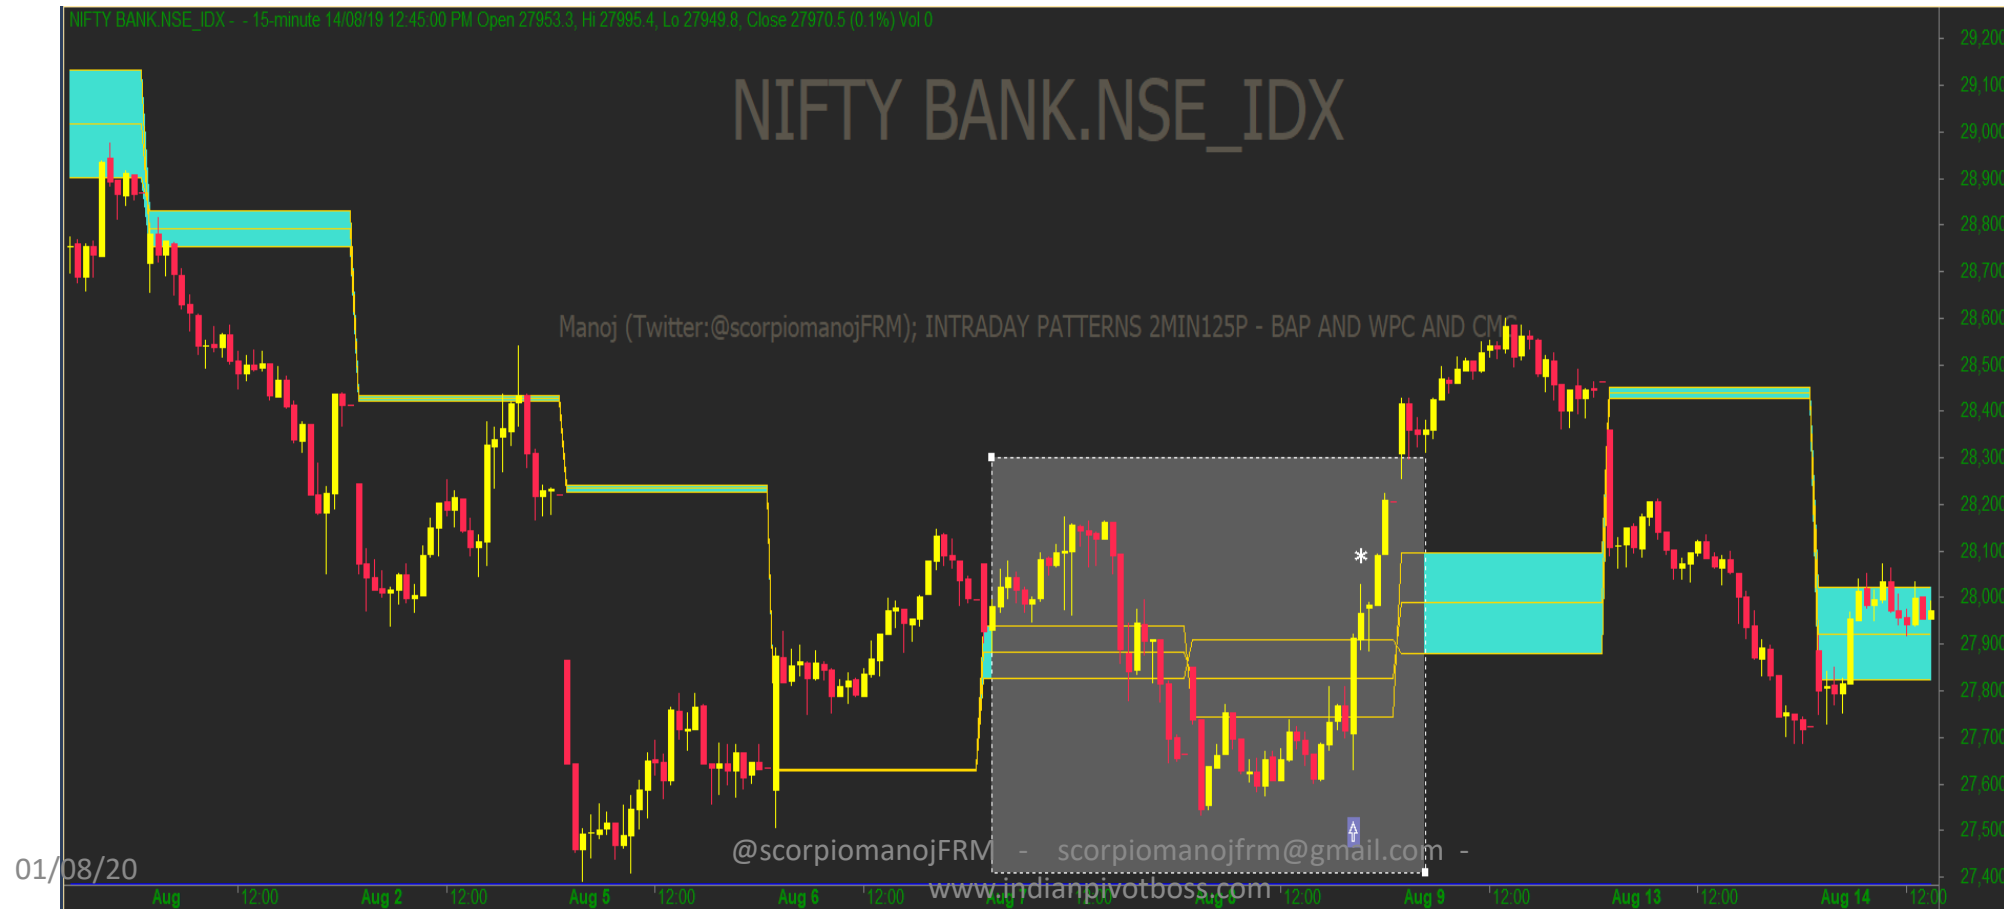

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS

- Overlapping HV

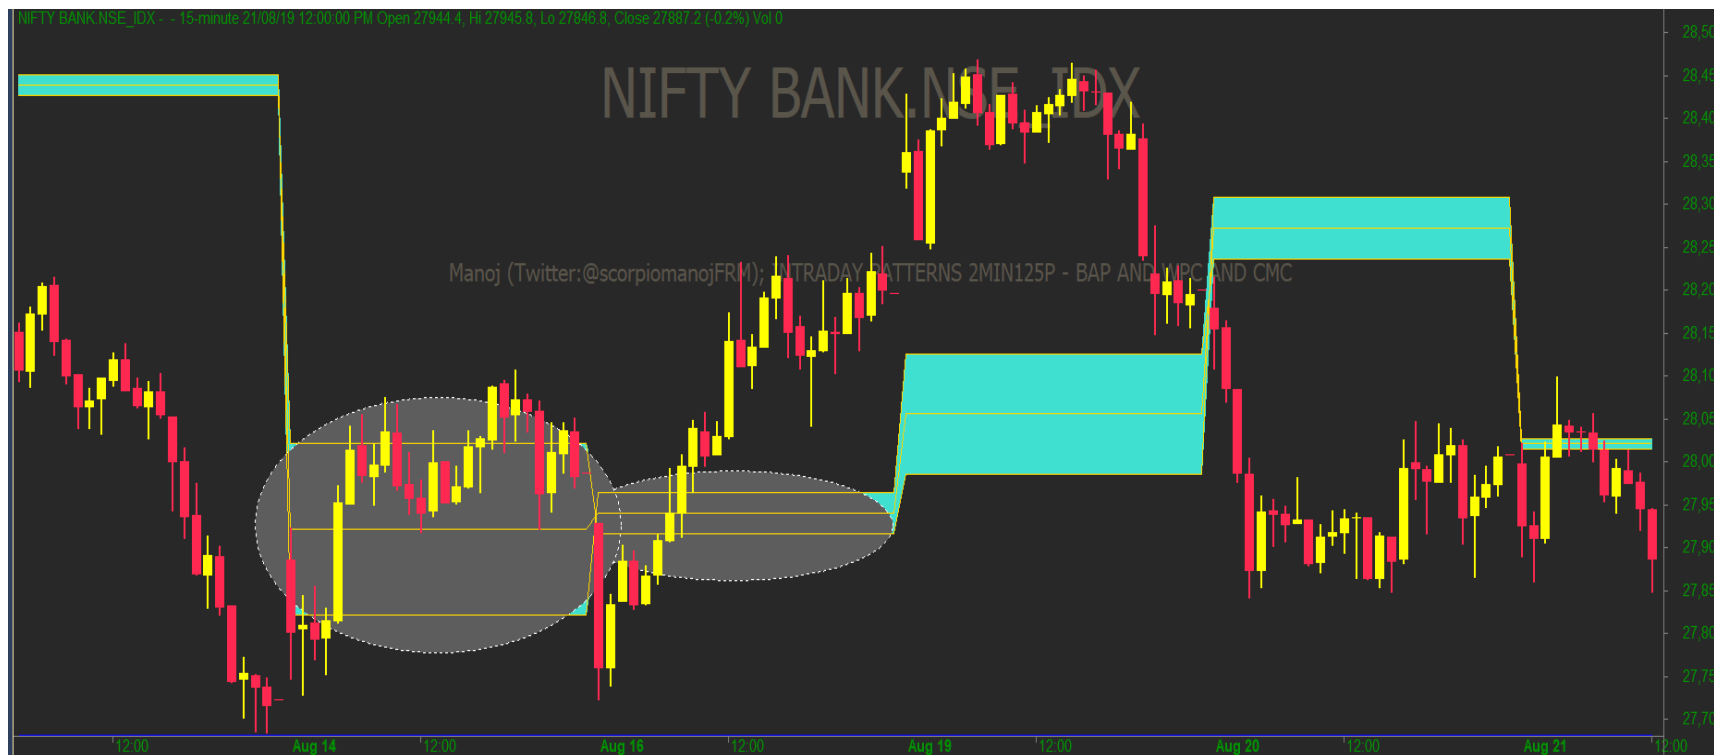

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS

- Overlapping LV

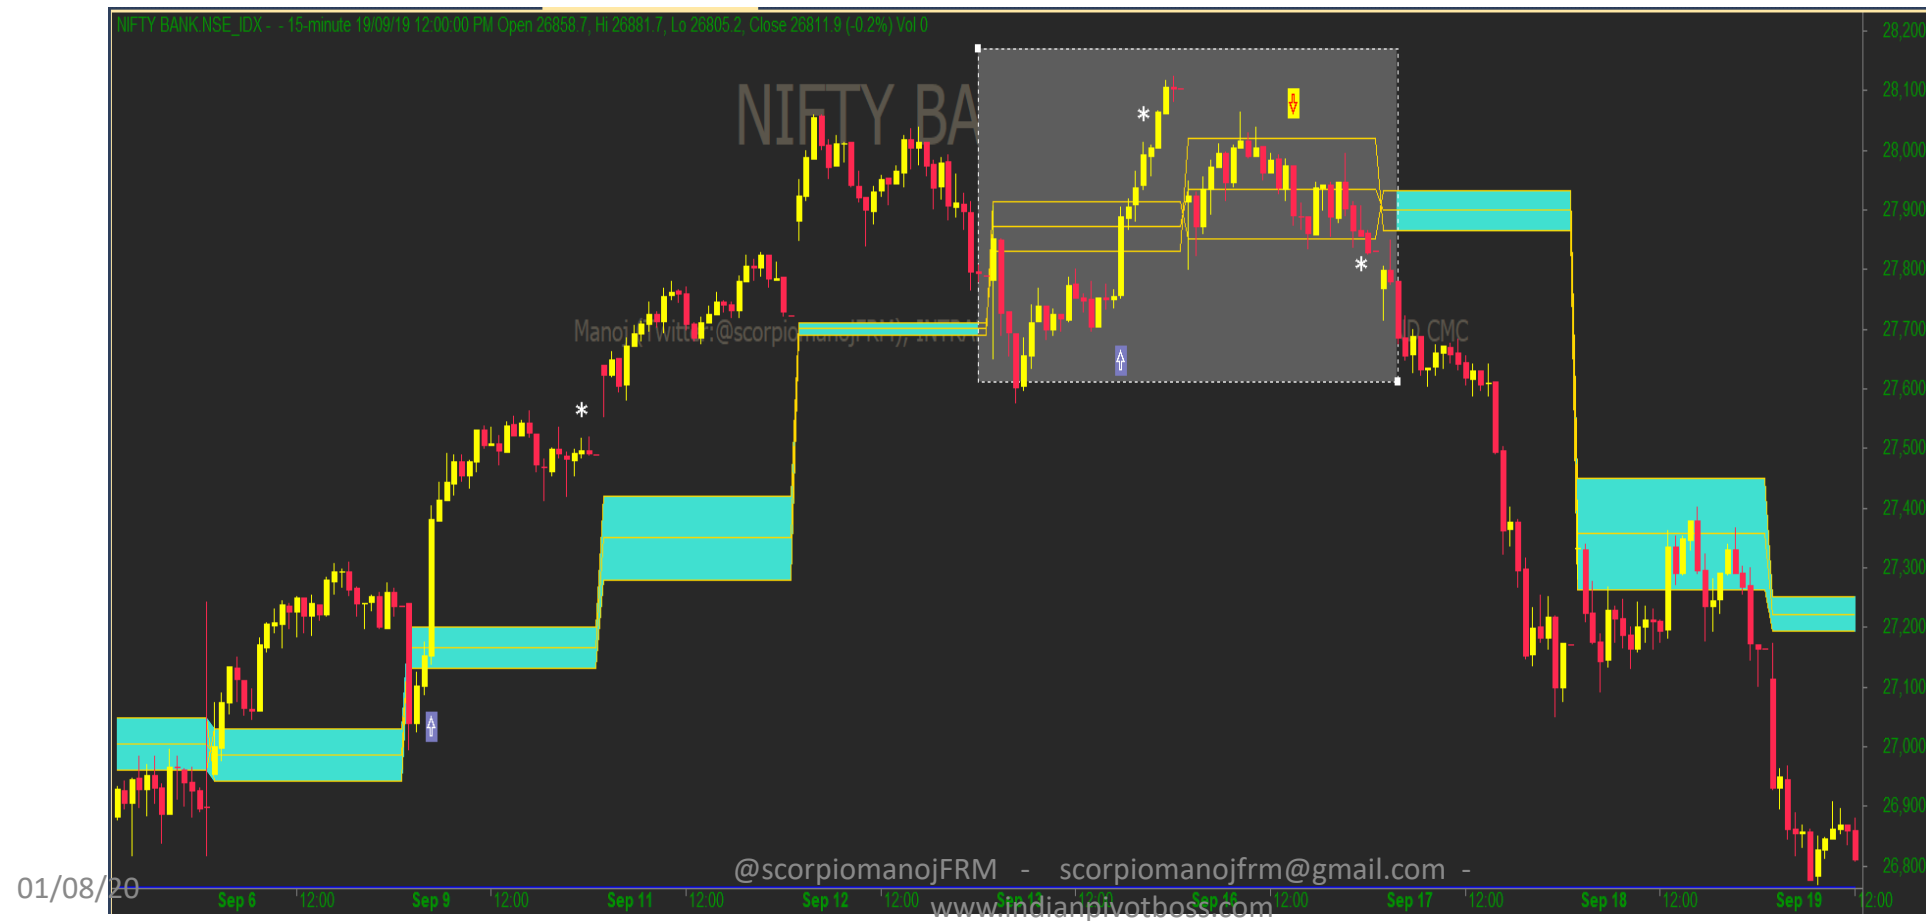

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS

- Inside Value

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS

- Outside Value

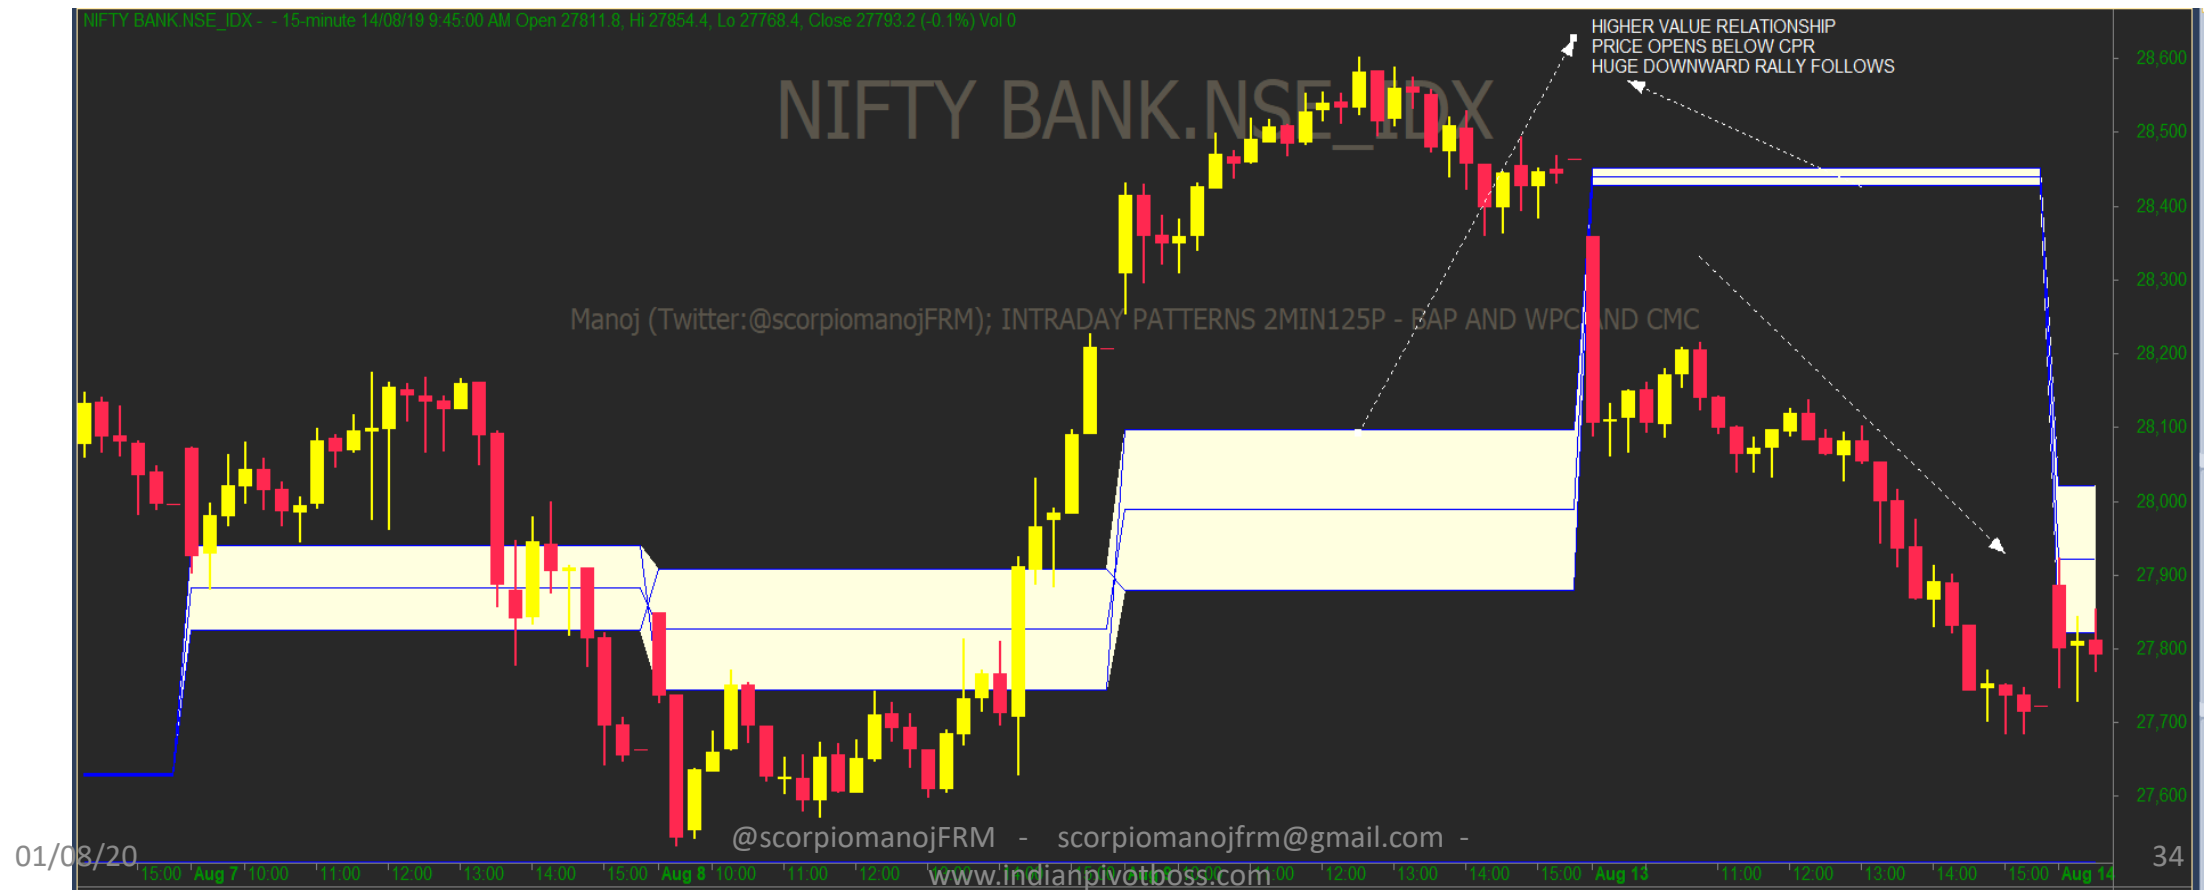

VI) C) APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS USING 1DAY PIVOT (TODAY'S AND TOM'S) LONG UNWINDING / SHORT COVERING RALLIES

- 2 day CPR relationship is very effective in taking trades when there are long unwinding / short covering based rallies.
- Long unwinding based selling rally possibilities :
 - LUR 1 – Higher Value relationship + 15 min opening candle bearish + below CPR (preferably not beyond S2) ; Short entry in the second candle with stops mid point of first bearish 15 min candle.
 - LUR 2 – Higher Value relationship + Opening above CPR + During the day cross under CPR. Short entry in the follow through candle after cross under / pull back towards CPR. Stops at Central Pivot
- Short covering based buying rally possibilities :
 - SCR 1 – Lower Value relationship + 15 min opening candle bullish + above CPR (preferably not above R2); Long entry in the second candle with stops mid point of first bullish 15 min candle.
 - SCR 2 – Lower Value relationship + Opening below CPR + During the day crossover above CPR; Long entry in the follow up candle after crossover / pull back towards CPR. Stops at Central Pivot.

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS

- LUR1 set up

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS

- LUR 2 setup

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS

- SCR1 setup

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS

- SCR2 setup

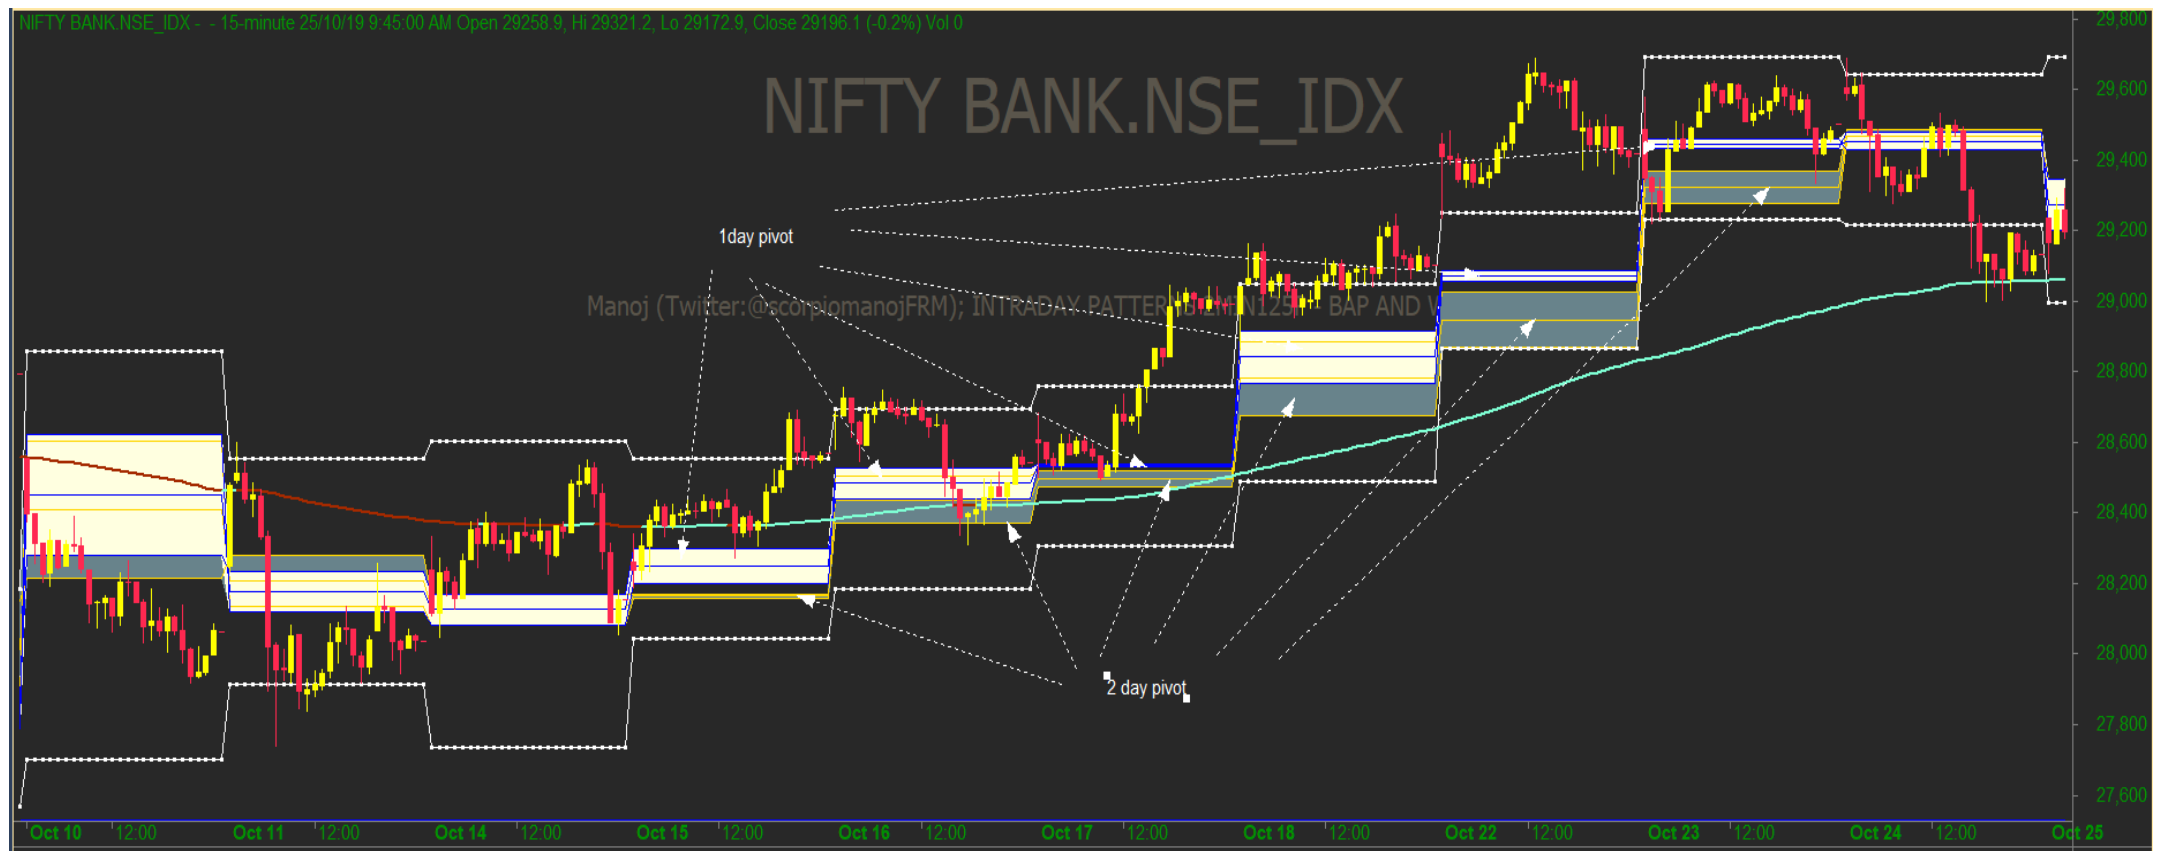

VI) D) APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS USING TOM'S 1DAY PIVOT AND 2 DAY PIVOT

- 2 day pivot / cpr is calculated using high and low of 2 day trading session and the previous day's close.
- 1 day pivot / cpr is calculated using high, low and close of previous day's session.
- General Rules :
 - If 1day CPR is below 2 day CPR, a possible downtrend.
 - If 1day CPR is above 2day CPR, a possible uptrend.
 - If 1day CPR is engulfing / same as 2day CPR, the Central pivot zone usually acts as a strong support / resistance zone.
 - If 1day CPR has been continuously below / above 2 day CPR over a certain period of time and if it reverses position, then possibly the trend has reversed.

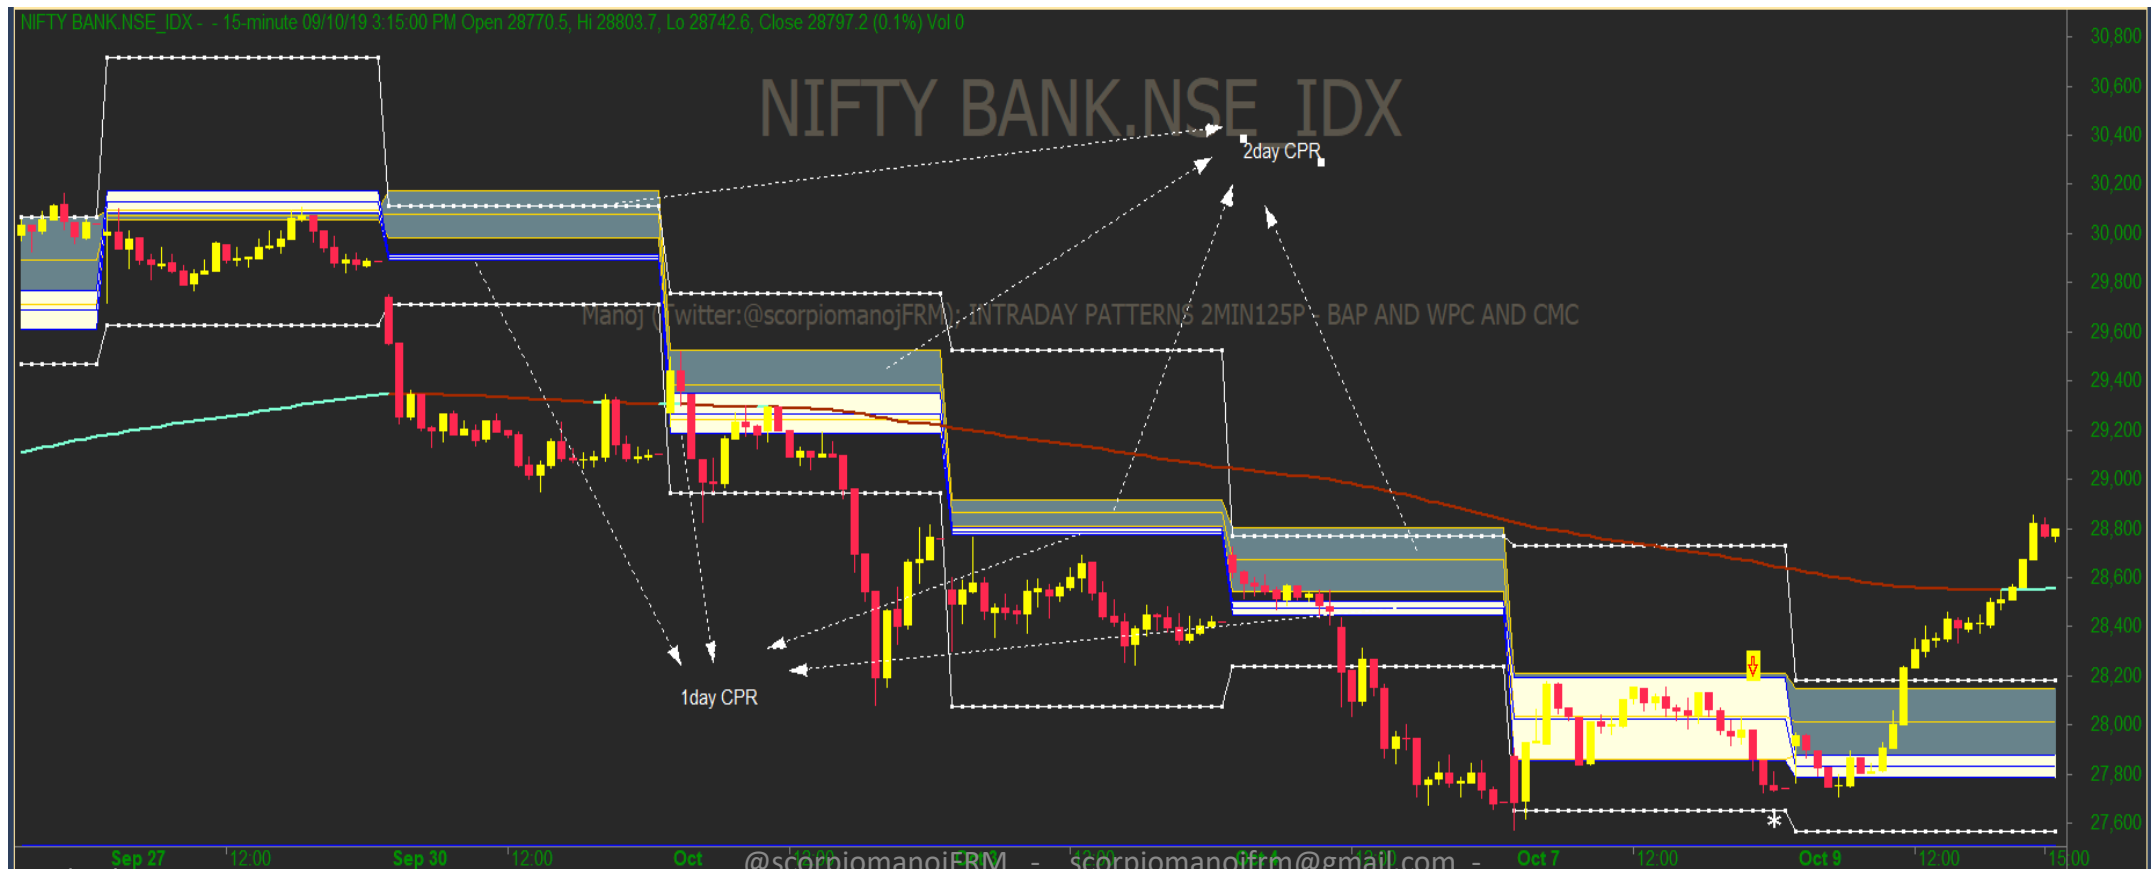

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS USING 1D2D PIVOTS

- 1day CPR above 2day CPR - uptrend

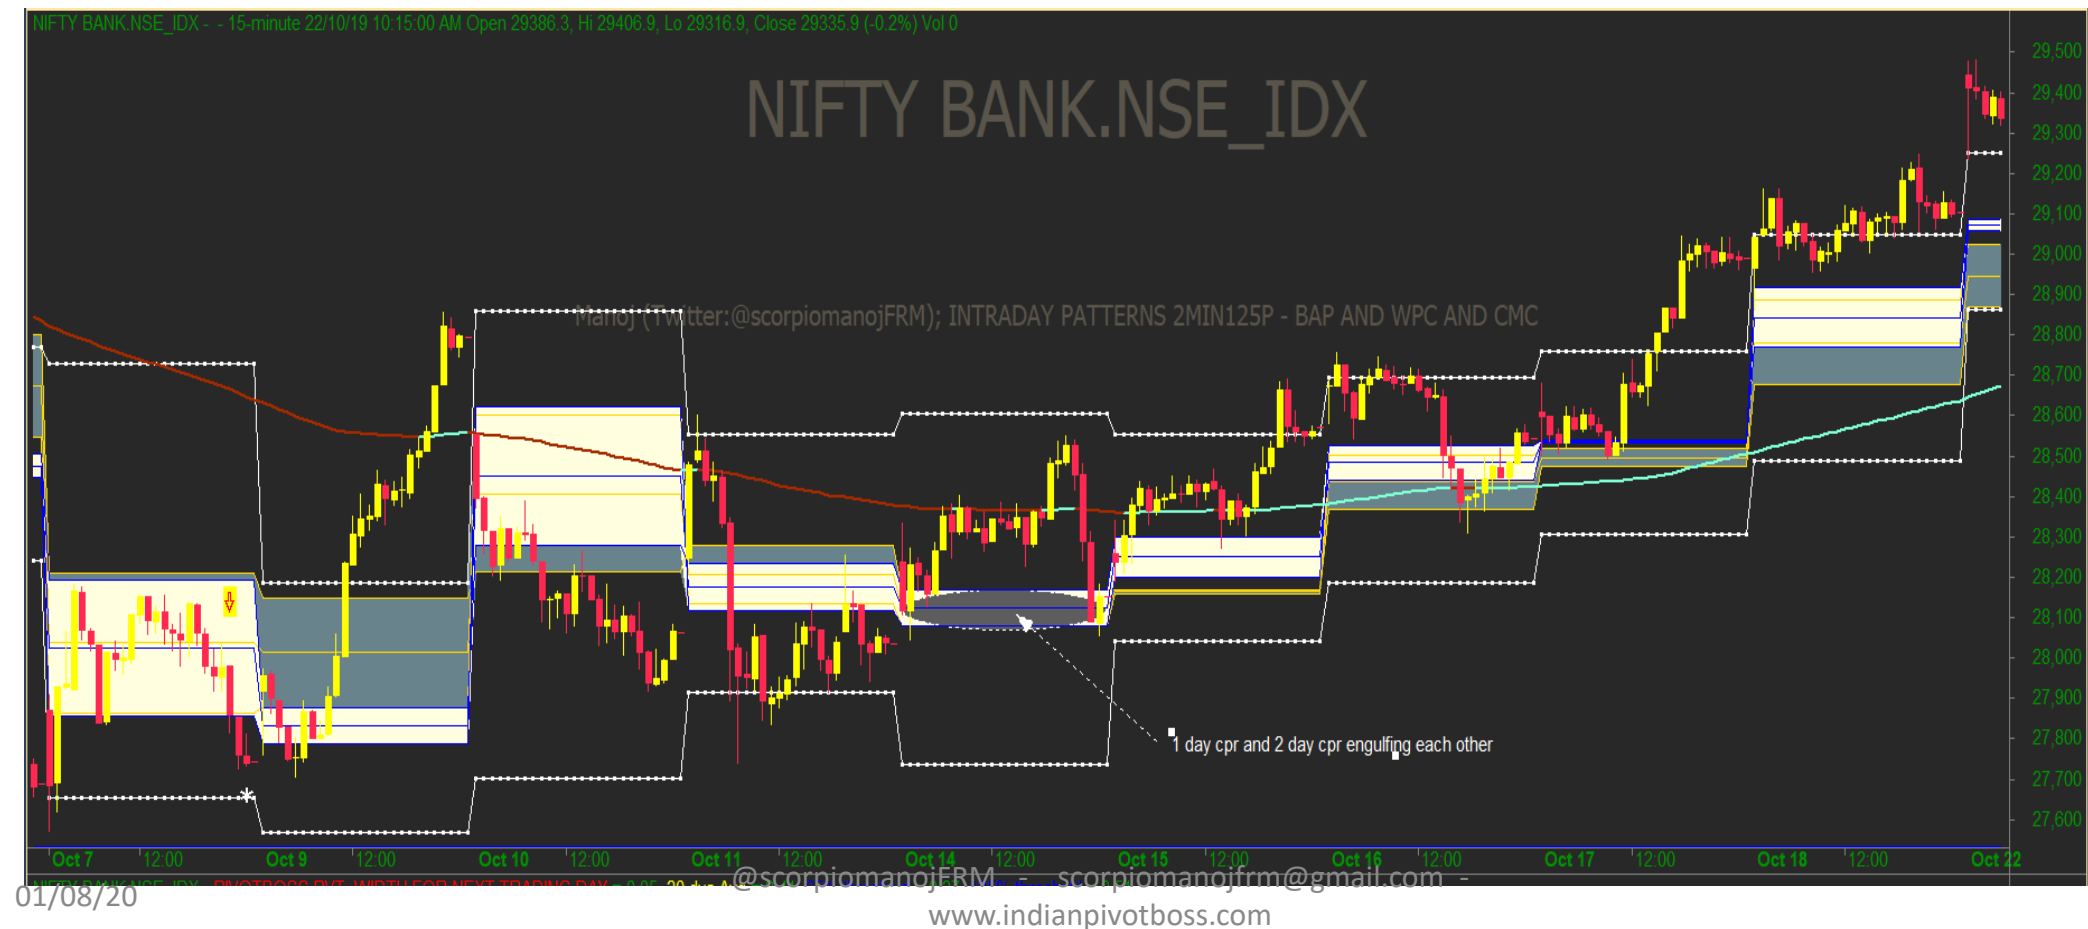

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS USING 1D2D PIVOTS

- 1day CPR below 2day CPR - downtrend

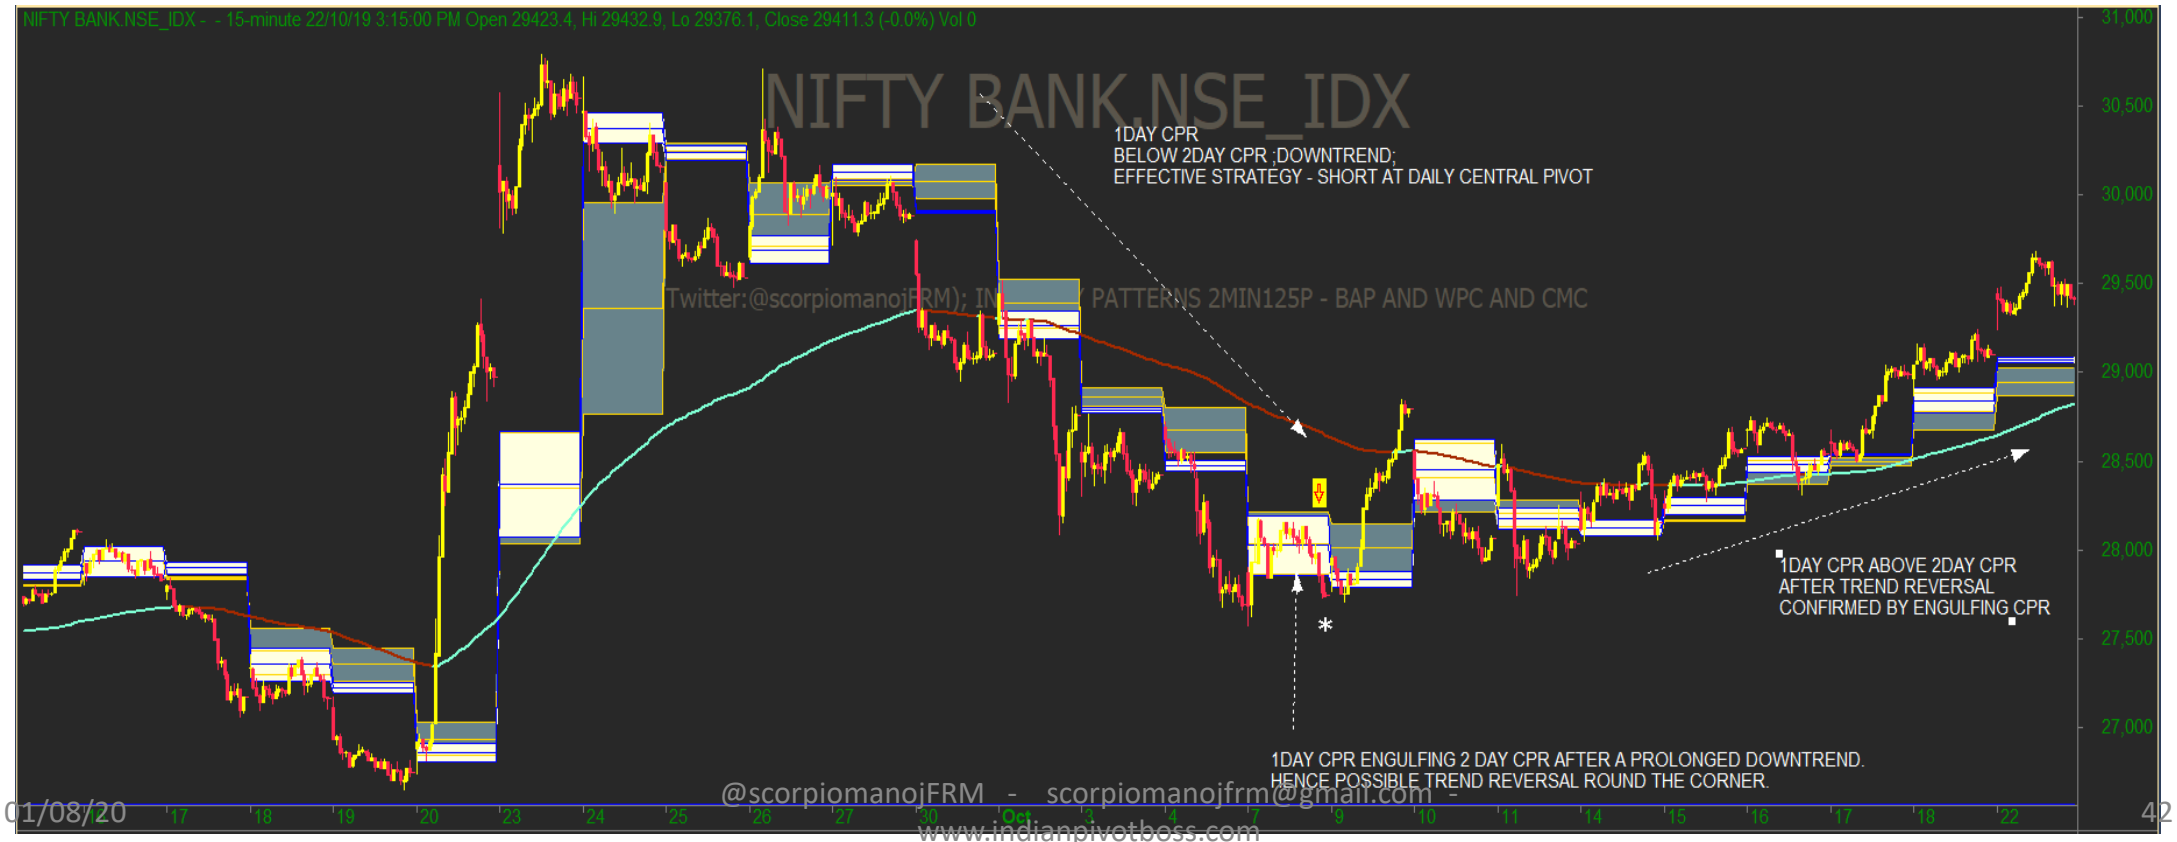

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS USING 1D2D PIVOTS

- 1day CPR engulfing 2day CPR / vice versa – Pivot zone strong S/R

APPLICATION OF PIVOTS – PIVOT TREND ANALYSIS USING 1D2D PIVOTS

- 1day CPR engulfing 2day CPR / vice versa after prolonged downtrend / uptrend – Trend reversal

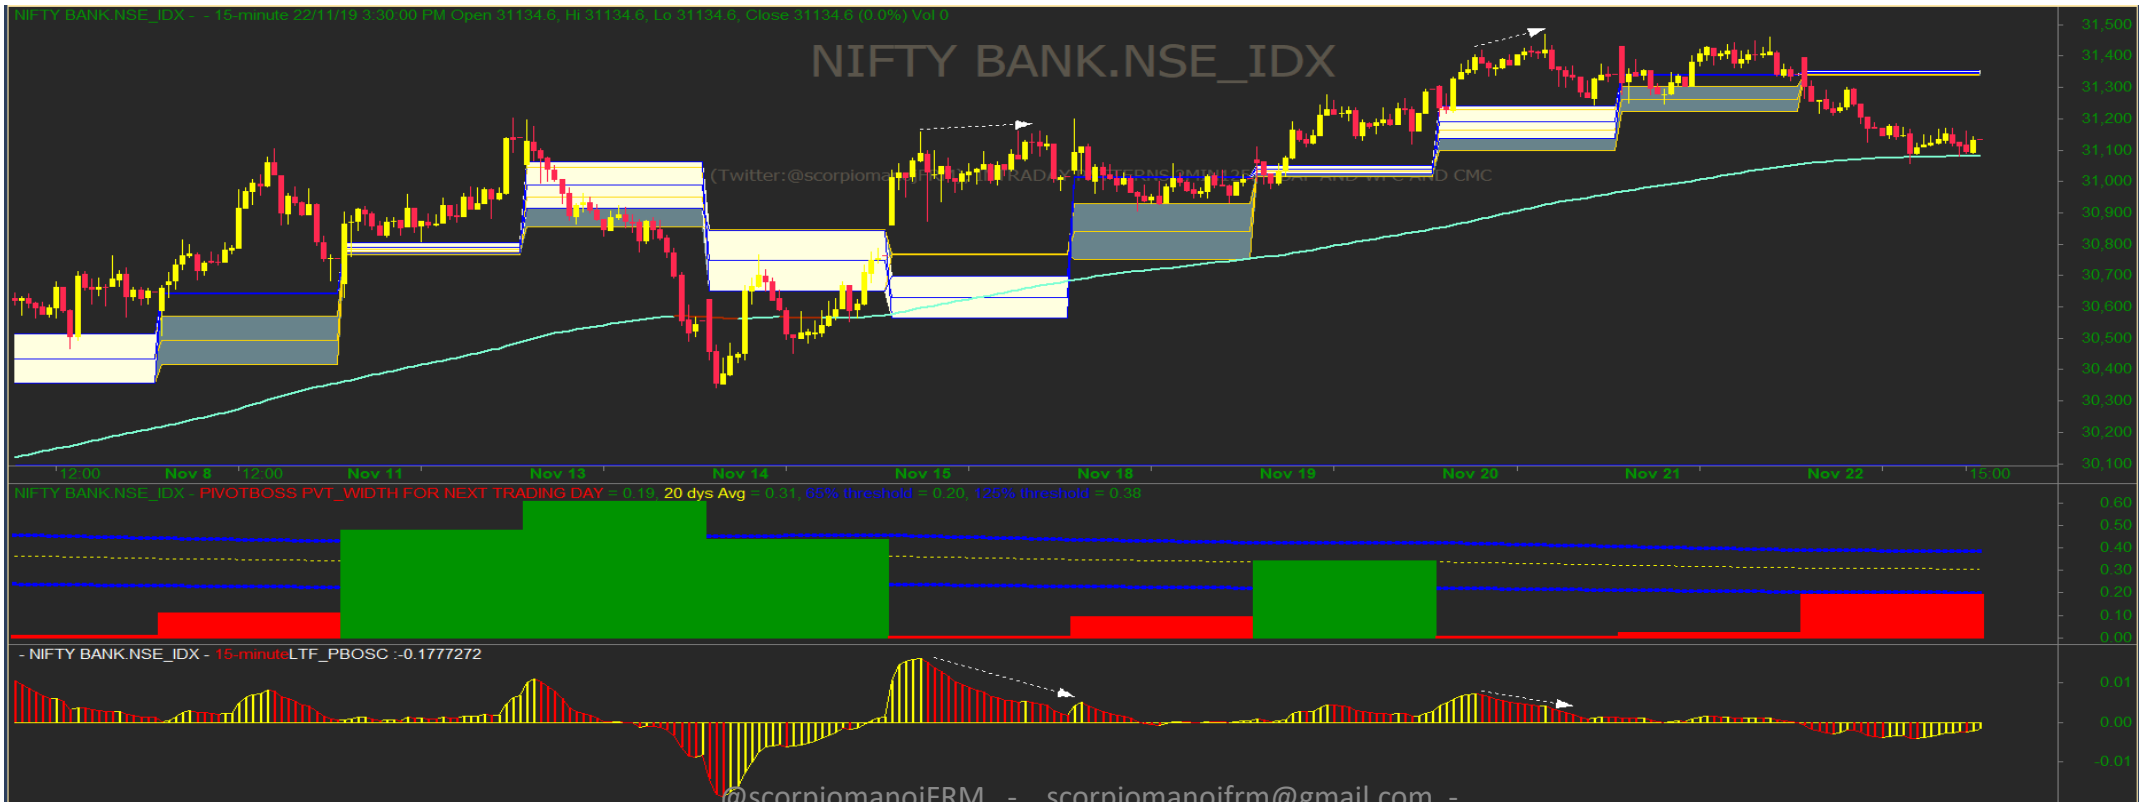

VI) E) APPLICATION OF PIVOTS – PIVOT BASED OSCILLATORS

- Pivot Based Oscillator (PBO) is calculated using the current (running pivots).
- To reiterate, pivots for trading are computed using previous day H,L and C; however PBO is calculated using the pivots based on the Current day's H,L and C so far.
- For eg, at 12.30 pm, the current pivot is the pivot based on H,L and C from the start of the day till 12.30 pm.
- 5, 8 and 13 period EMAs of the current pivots is taken. Deltas of these three EMAs calculated, ie, $5\text{ema} - 8\text{ema}$, $8\text{ema} - 13\text{ema}$ and $5\text{ema} - 13\text{ema}$. PBO is the sum of all the differences divided by the current pivot. It oscillates above and below zero. (Can also use 3,5,8 / 3,5,13/ 8,13,21,...)
- PBO is used mainly for two reasons:
 - To identify momentum of the price. If price is making higher high along with upward sloping PBO, it indicates strong momentum. On the other hand, if price is making higher high and PBO is downward sloping, it indicates waning momentum. Divergence are mainly used to square your positions rather than taking fresh positions.
 - If PBO crosses the zero line from above, most likely the buyers are stepping in and vice versa. Crossovers are used for creating fresh positions.

APPLICATION OF PIVOTS – PIVOT BASED OSCILLATORS

- PBO divergence with price is indicated in the form of arrows. Divergence at KEY LEVELS are extremely powerful.

APPLICATION OF PIVOTS – PIVOT BASED OSCILLATORS

- PBO Median cross – If PBO crosses zero line from below, possibly buyers are stepping in and vice versa.
- PBO Median cross in conjunction with price action (Open Low / Open High Candles) and / or in conjunction with pivots provides a great edge.

VI) F) APPLICATION OF PIVOTS – PIVOT SHIFT INDICATOR

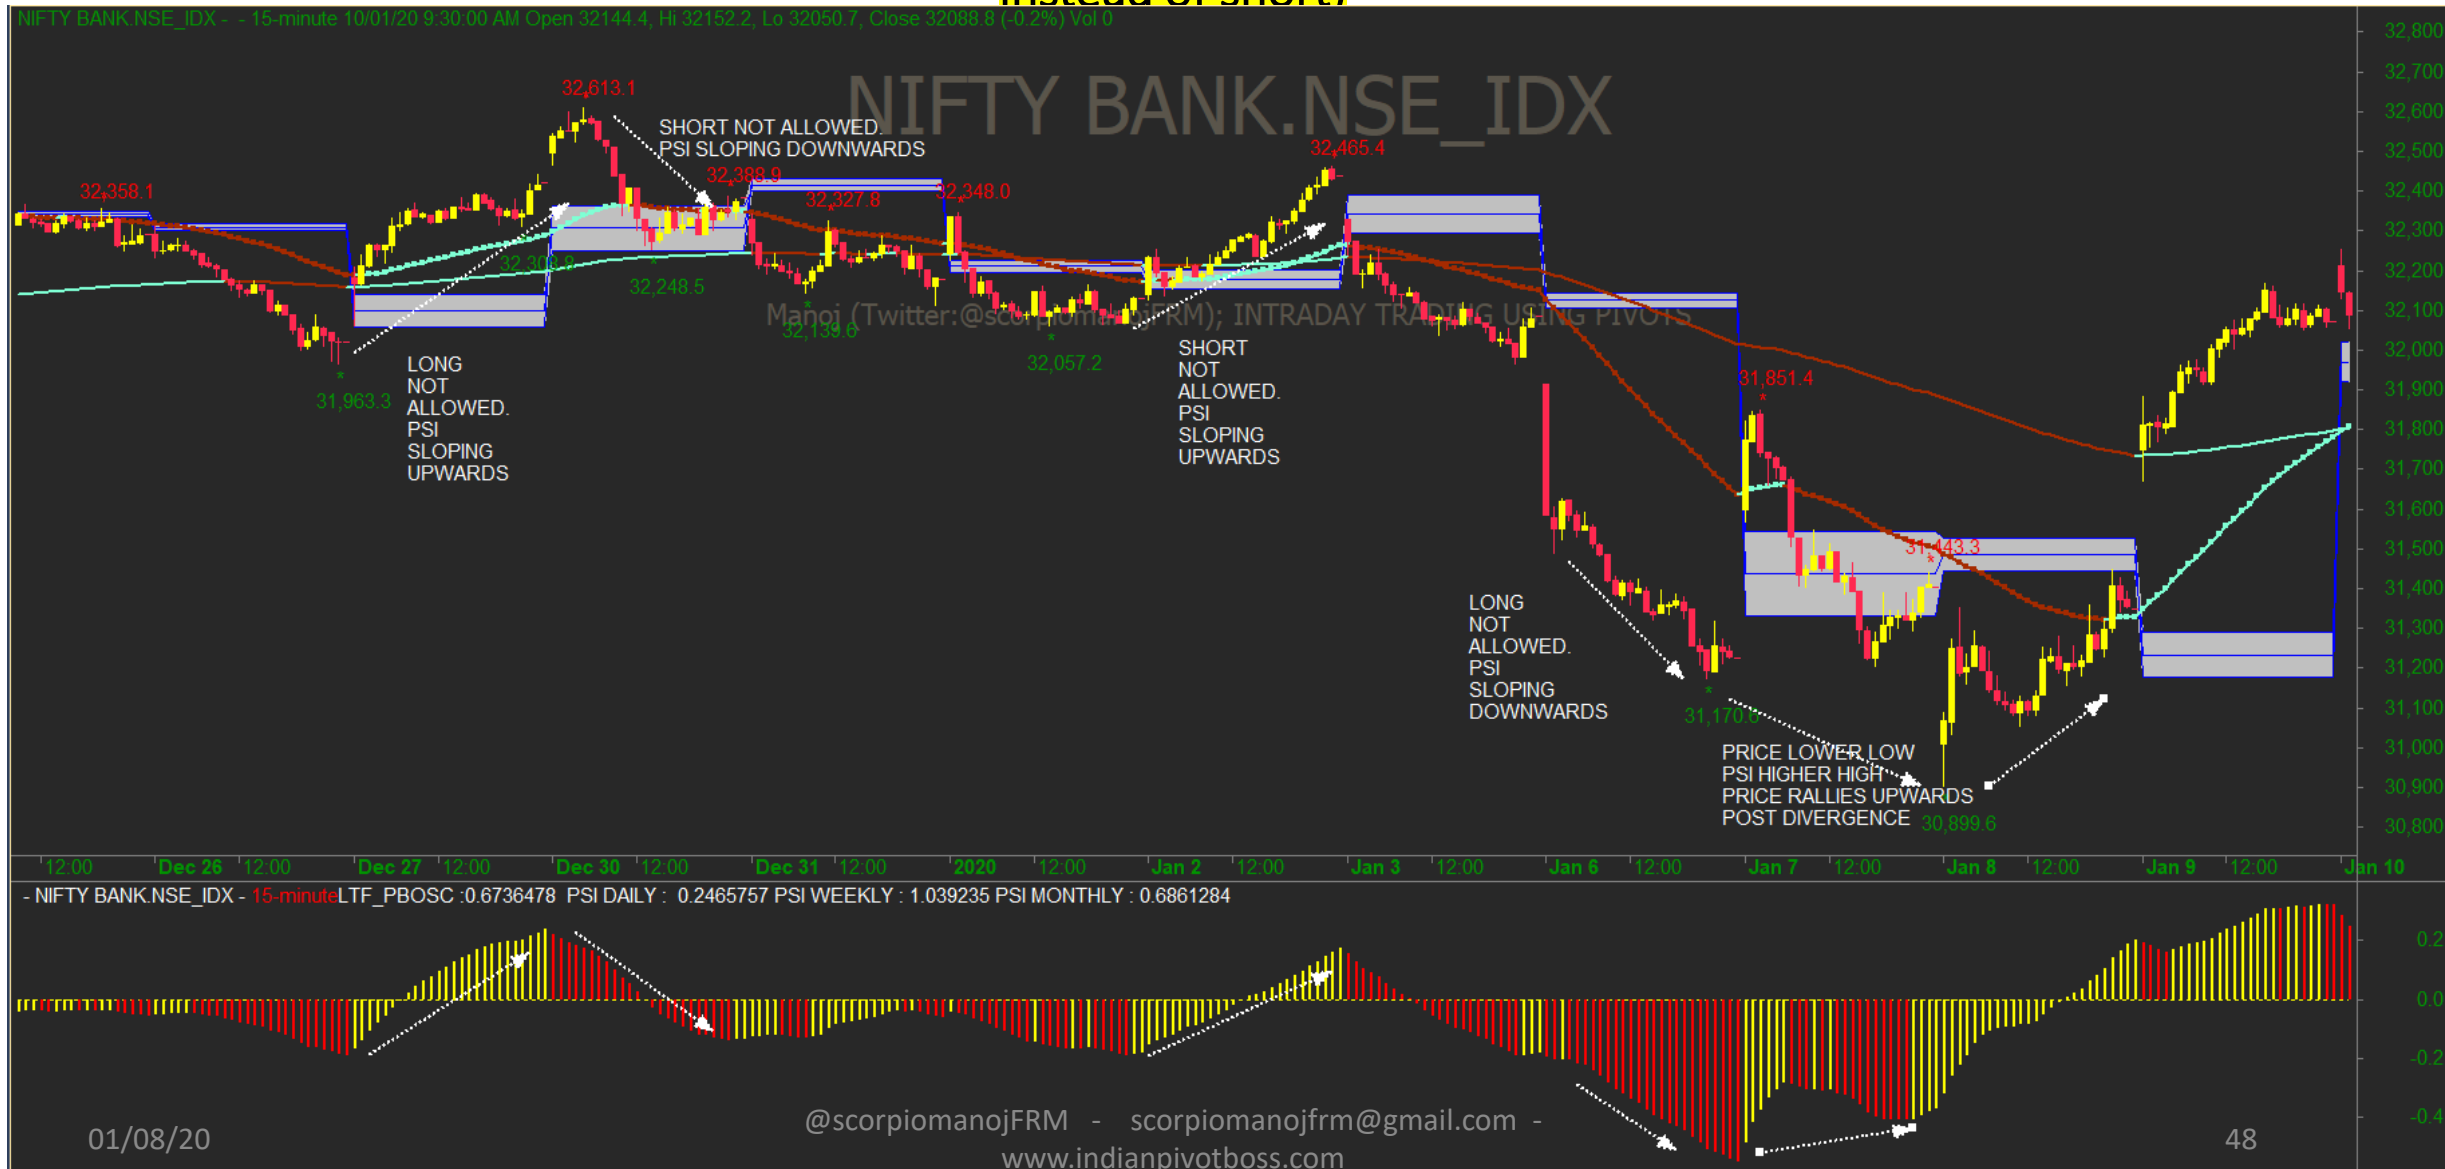

- Pivot Shift Indicator (PSI) is a new concept (not defined anywhere in any books) developed by me.
- Can be used with developing CPR and also with CPR.
- Concept behind this indicator is :
 - $P = (H + L + C) / 3$
 - $BC = (H + L) / 2$
 - $TC = (P - BC) + P$
 - BC (Bottom Central) and TC (Top Central) interchanges depending on the price movement
 - Usually TC will be greater than BC when C is near highs (ie during bullish candle formation) and vice versa.
 - When a series of bullish candle forms the developing pivot TC will be higher than developing pivot BC and hence the oscillator which is the % difference between them goes above zero. Similarly when a series of bearish candle forms, the developing TC will be lower than developing BC and hence the oscillator goes below zero.
 - PSI tries to capture when TC and BC begins to converge from higher difference to lower difference which essentially leads to downward sloping histogram which inturn means that bullish move is fading and hence it warns NOT TO GO LONG. Similar logic holds good for the other way round as well.
 - Example 1 : Let us assume a bullish candle, O= 96, H = 100, L = 95, C = 99. So, P = 98. BC = 97.5. TC = 98.5. Hence TC is greater than BC in a bullish candle.
 - Example 2 : Let us assume a bearish candle, O = 99, H = 100, L = 95, C = 96. So P = 97, BC = 97.5, TC = 96.5. Hence TC is lesser than BC in a bearish candle.

VI) F) APPLICATION OF PIVOTS – PIVOT SHIFT INDICATOR...(CO NTD /-)

- PSI should be used only as a WARNING SIGNAL AND NOT A TRADE SIGNAL.
- PSI is only a CENSORSHIP indicator. It tells you WHAT NOT TO DO. It DOES NOT tell you WHAT TO DO.
- If PSI is sloping downwards, DO NOT GO LONG. It doesn't mean that you should take a short trade immediately. Taking a short trade should be confirmed with other setups.
- If PSI is sloping upwards, DO NOT GO SHORT. It doesn't mean that you should take a long trade immediately. Taking a long trade should be confirmed with other setups.
- PSI divergence vis – a – vis price is a very good indicator to assess the strength of the momentum. If price is forming higher highs and PSI forming higher lows, then possibly upside momentum is fading and vice versa.

APPLICATION OF PIVOTS – PSI Examples (Contd.../-)

(corrigendum : 1st comment in pic – read as Short instead of Long / 2nd comment in pic – read as Long instead of short)

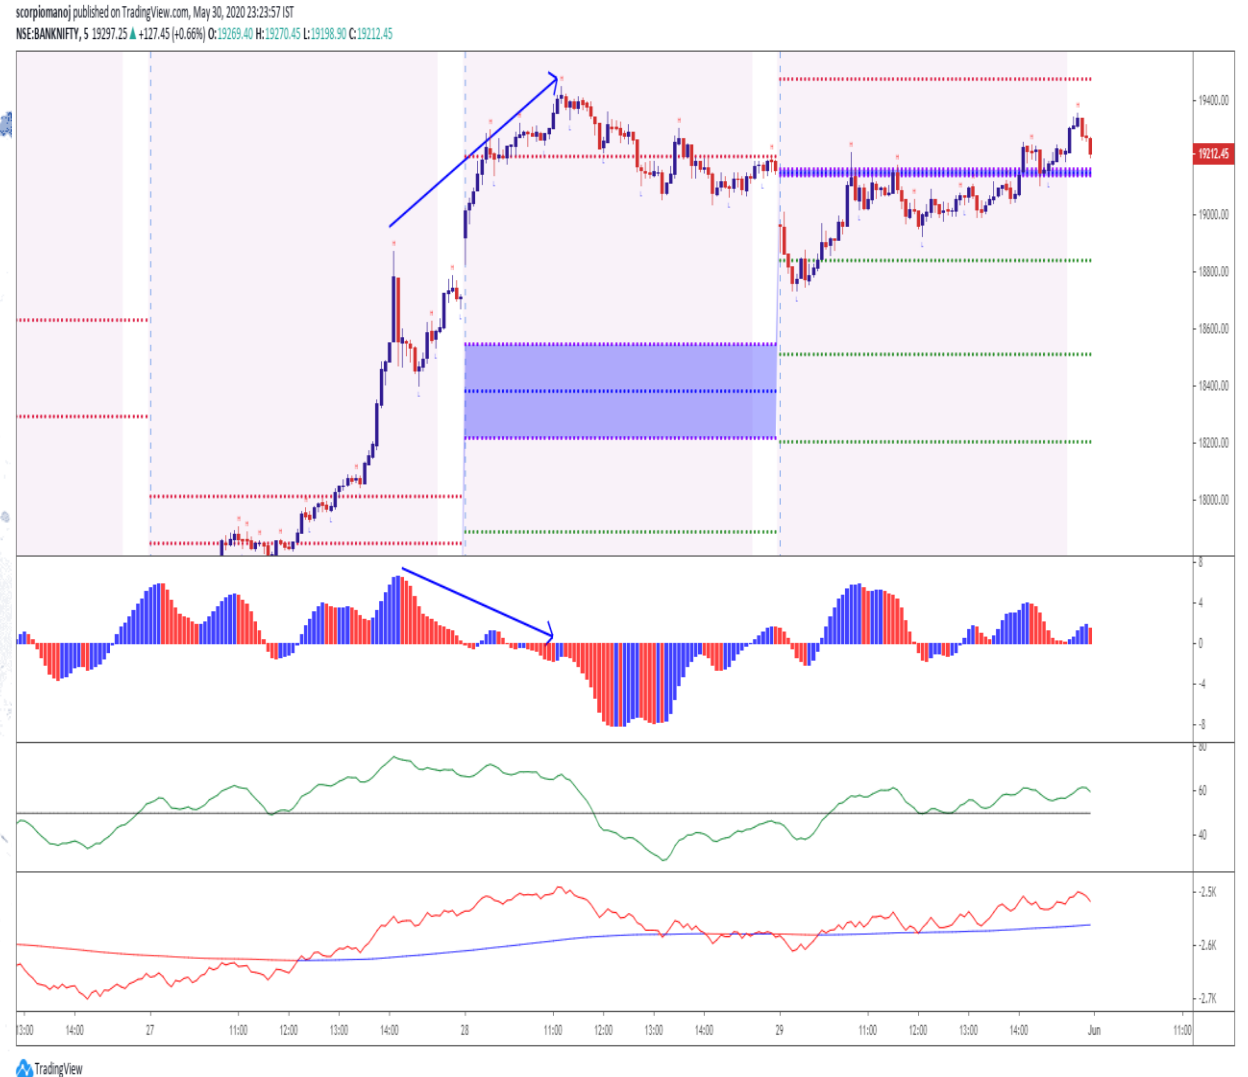

VII) ADMIN INDICATOR

- ADMIN – Advance Decline Momentum Indicator.
- Advance Decline line is the number of advances minus number of declines. For e.g. in BNF, out of the total if the number of advances in any given time frame is 7 and declines is 5 at a particular point, then AD line is 2 for that point.
- 3 components
 - ADMIN shorter / longer momentum
 - ADMIN MACD
 - Advance Decline line and its 200 EMA
- ADMIN momentum – 13 period RSI of the Advance Decline line is the shorter momentum and 55 period RSI is the longer momentum.
- ADMIN MACD – 13 and 55 period MACD of AD line.
- AD line – Number of advances minus number of declines. Its 200 ema is also plotted.
- **THIS INDICATOR IS ONLY AVAILABLE IN TRADINGVIEW AS IN AMIBROKER IT IS NOT POSSIBLE TO IMPLEMENT DUE TO TECHNICAL CAPABILITIES.**

VII) ADMIN INDICATOR- USAGE (Contd.../-)

- ADMIN shorter momentum divergence with price gives the best indications of reversal. I.e if Price is making higher highs and ADMIN shorter momentum is making lower lows, it is a bearish sign / end of bullish sign. If price is making lower lows and ADMIN shorter momentum is making higher highs, it is a bullish sign / end of bearish sign. Your point of action should be at KEY LEVELS / resistance or support levels ONLY when divergence is spotted. If divergence is spotted at no zones, then DO NOT ACT.
- ADMIN MACD divergence with price also gives the best indications of reversal of trend. The rules are similar to the above.
- AD line crossing up 200 day ema is a bullish sign and AD line crossing down 200 day ema is a bearish sign. Also if AD line is sloping down but ADMIN shorter momentum and ADMIN MACD are sloping up, it is a bullish sign and vice versa.
- Try spotting ADMIN divergence + MACD divergence together along with any KEY LEVELS for a high probability action. If this happens along with AD line 200 ema crossing, it is the best of all.

VII) ADMIN INDICATOR- egs (Contd.../-)

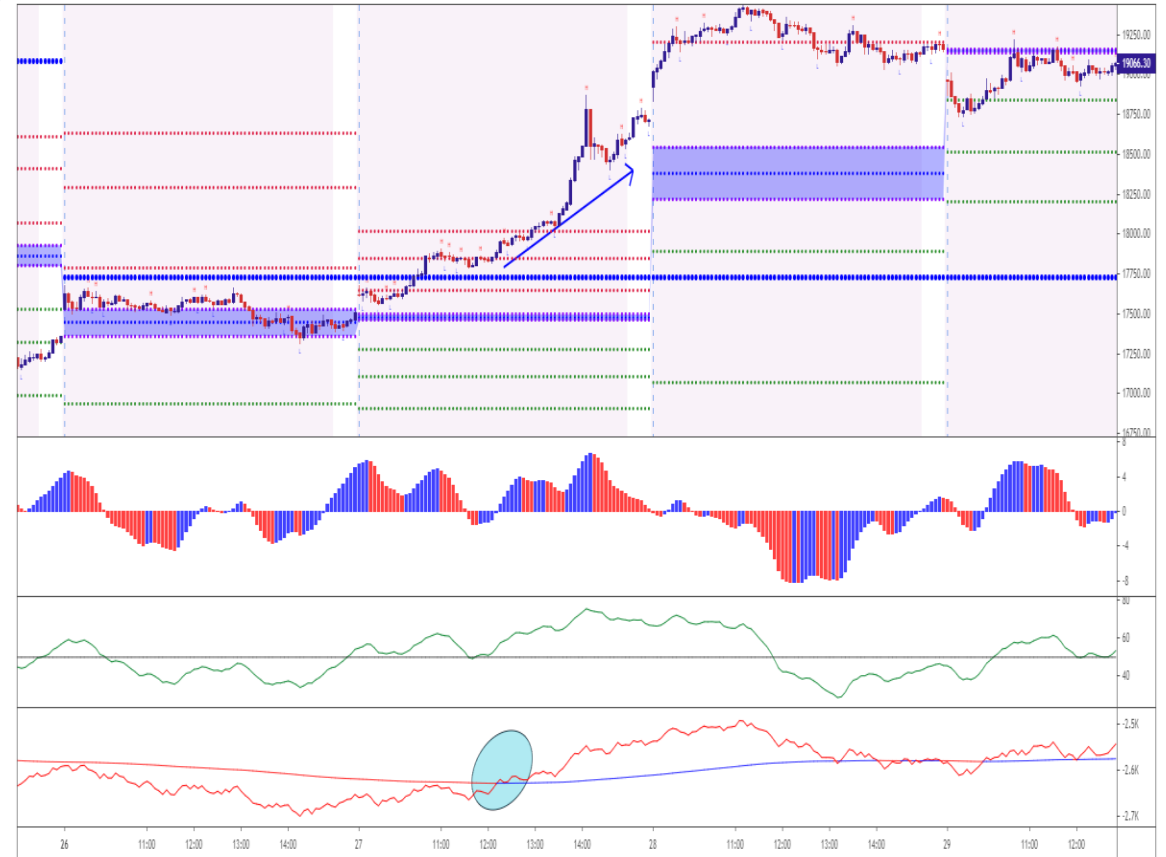

VII) ADMIN INDICATOR- Egs. (Contd.../-)

VII) ADMIN INDICATOR- egs (Contd.../-)

VII) ADMIN INDICATOR- egs (Contd.../-)

VII) ADMIN INDICATOR- ACCESS(Contd .../-)

- ADMIN set of indicators is accessible only in trading view. It is not versatile for continuous running in Amibroker due to Amibroker capabilities.
- In trading view, go to my profile `scorpiomanoj`. Go to scripts. You will find IndianPivotBoss_ADMIN.
- Click on that and you will get a full page of the indicator with comments. In the bottom right there is a button to click which adds this to favorites. Click on that button. Now it is added to your favorites.
- Now go to trading view chart window and under indicators search go to favorites; you will find this indicator.
- For Bank Nifty and Nifty respectively,.....
- <https://www.tradingview.com/script/CSq5uotP-IndianPivotBoss-ADMIN/>
- <https://www.tradingview.com/script/CalK19tB-IndianPivotBoss-ADMIN-NIFTY/>

VIII) TRADING SETUPS

- **GRADE A**
 - 6 conceptual categories with a total of 9 Intraday trading setups. (Use 5 min charts)
 - Backtested using insample (2013-2019) and out of sample (2019 – 2020) Banknifty data.
 - Results are extremely satisfactory with good profit factor.
 - Suggestion is to master these setups over a period of time. To start with can select 2-3 of them.
 - 1 swing trading setup. (Use 25min / 30 min / 75 min charts)
 - **COMPLETE BACKTEST REPORTS ARE PROVIDED IN A SEPARATE LINK OUTSIDE THIS PRESENTATION.**
- **GRADE B**
 - 11 intraday trading setups. (Use 5 min charts)
 - Backtested using insample (2013-2019) and out of sample (2019 – 2020) Banknifty data.
 - Results are average.
 - These strategies can be used to play around with improvements and some of them could potentially move to Grade A setups going forward based on performance.
 - **ONLY LONG SETUPS EXPLAINED. REVERSE THE LOGIC FOR SHORT SETUPS IN ALL THE STRATEGIES.**

VIII) TRADING SETUPS – GRADE A

- Manoj Ultimate Pivot Strategy (MUPS in Amibroker / JP_MUPS in Trading View)
- CAMARILLA BASED STRATEGIES
 - Developing Golden Pivot Zone Strategy (DGPZ)
 - Camarilla Breakout Strategy (CAM)
- Volatility Breakout Strategy (VBO)
- DEVELOPING PIVOT BASED STRATEGIES
 - Daily – Monthly Running Pivot Cross (DMRPcross)
 - Monthly Running pivot cross Strategy (MRPcross)
 - Daily Running pivot cross strategy (DRPcross)
- Pivot EMA trading Strategy (PEMA trade)
- After 1 pm breakout strategy (AOPM)
- MUPS INDEX SWING STRATEGY

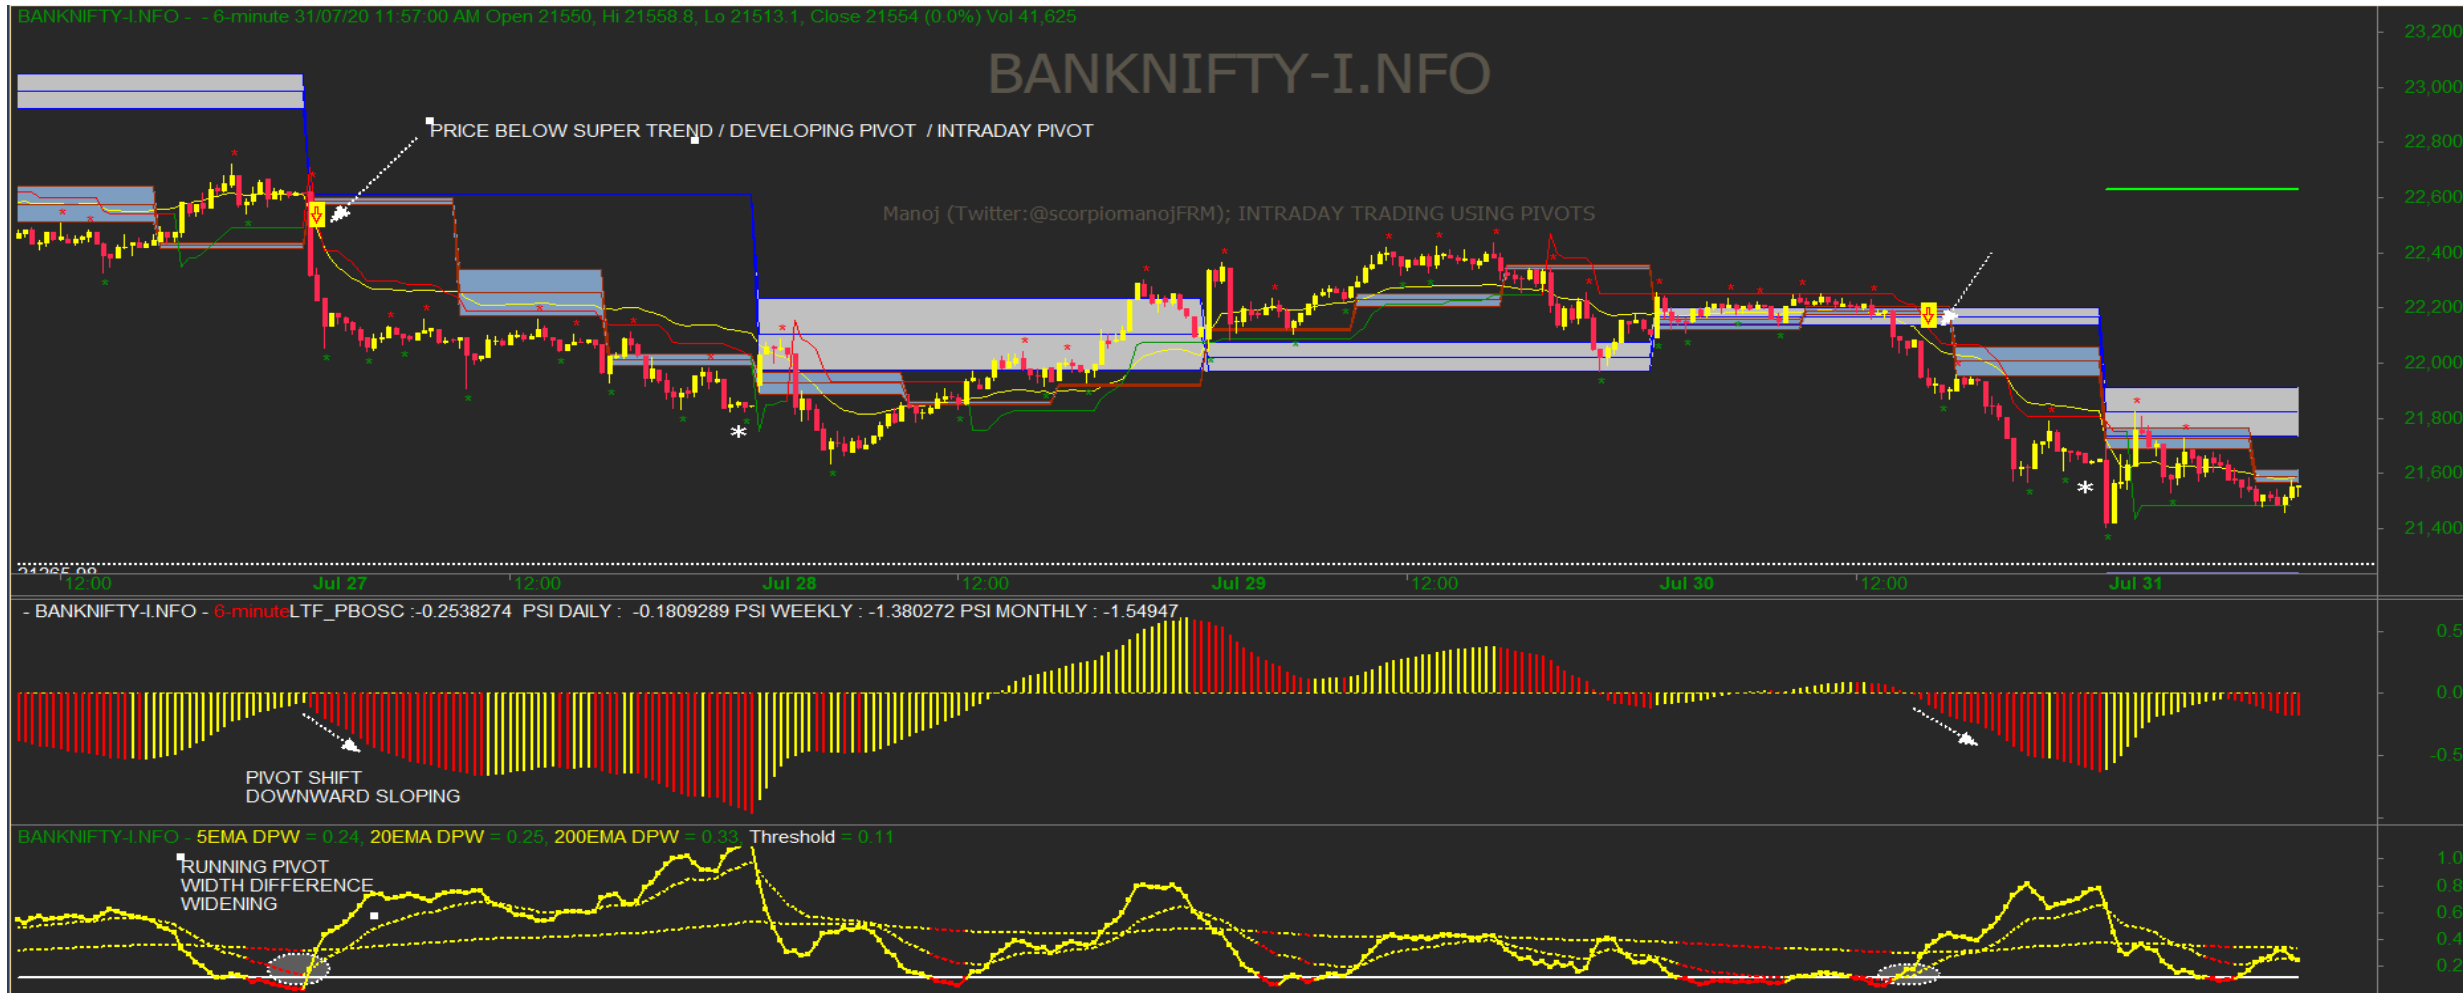

TRADING SETUPS – MUPS (MANOJ ULTIMATE PIVOT STRATEGY)

- This strategy is RELATIVELY the most powerful strategies of all. Accordingly this strategy does not produce trades on a frequent basis.
- This strategy ensures that the trade is done only when there is an evidence of a trend emerging.
- Inorder to identify if a trend is emerging, the metric used is a relatively less lagging metric, which is developing pivot width.
- Let us understand the concept why developing pivot width is a better indicator of trend.
- When an UP trend emerges, Developing Central Pivot (average of HLC since start of the session) starts to move up because H and C keeps moving up with L constant. TC and BC (Upper CPR and Lower CPR) also keeps moving. TC mathematically is a combination of one third of BC and two thirds of close. BC is average of H and L. Hence TC increases at a faster rate than BC which makes the gap between TC and BC wider that results in an increased Pivot width **(THIS IS MY OWN DISCOVERY. NOT AVAILABLE IN ANY OTHER PIVOT COURSE). HENCE IF THE DIFFERENCE BETWEEN TC AND BC IS PLOTTED AND IF IT IS SLOPING UPWARDS, IT MEANS THAT A TREND IS EMERGING.**
- **SIMILARLY IN A DOWNTREND IF THE DIFFERENCE BETWEEN BC AND TC IS PLOTTED AND IF IT IS SLOPING UPWARDS, IT MEANS THAT A TREND IS EMERGING.**
- **HENCE UNIVERSALLY FOR BOTH UPTREND AND DOWNTREND, INORDER TO DETERMINE IF MARKET IS TRENDING, IF THE ABSOLUTE DIFFERENCE BETWEEN TC AND BC IS PLOTTED AND IF IT SLOPES UPWARDS, IT MEANS THAT A TREND IS EMERGING. (UNDERSTAND THIS CONCEPT VERY WELL).**
- Pivot width is the width of the CPR based on high low and close of the previous trading session ; Developing pivot width is the width of the CPR based on the high low and close of the current trading session from the start of the day. Width of CPR is nothing but the absolute difference between TC and BC (in terms of %).
- A threshold of 0.11 is set based on historical analysis dating back since 2012. Developing pivot width movement above 0.11 is the first sign of trend emerging. To confirm, a second sign is developed which is crossover of DPW over its 20 ema / Third sign is crossover of 200 ema. Ideally, 2nd sign is sufficient for an entry.

TRADING SETUPS – MUPS (MANOJ ULTIMATE PIVOT STRATEGY).... Contd...

- Long conditions
 - Developing pivot width's 5 period ema is greater than 20 period ema and they are above threshold of 0.11 but less than 0.33 . **(TREND DETERMINANT)**
 - PB oscillator, Pivot RSI and Pivot Shift Indicator – All are sloping upwards **(MOMENTUM AND DIRECTION DETERMINANT)**
 - Price above intraday pivot AND Price above developing (running) daily pivot and above supertrend. **(ENTRY LOCATION DETERMINANT)**
 - Stop is Central pivot (tad below to give room for sudden moves).
 - Ideally, this strategy aims to capture the trend and hence potentially trade is expected to be valid till end of the day. However as always anything can happen in the market. Hence to safeguard your positions, exit strategy is based on pivot shift indicator / supertrend. Exit if Pivot shift indicator starts sloping downwards with 3 downward sloping histograms OR price drops below supertrend.
- Short conditions
 - Similar to long logic but in the other direction.
- JP_MUPS (For TRADINGVIEW USERS)
 - JP_MUPS uses an extra confirmation from ADMIN indicator also. Hence JP_MUPS is available only in trading view since ADMIN is available only in trading view.
 - <https://www.tradingview.com/script/dlOxhfCO-IndianPivotBossJP-MUPS/>

TRADING SETUPS – MUPS (Contd.../-)

TRADING SETUPS – MUPS (Contd.../-)

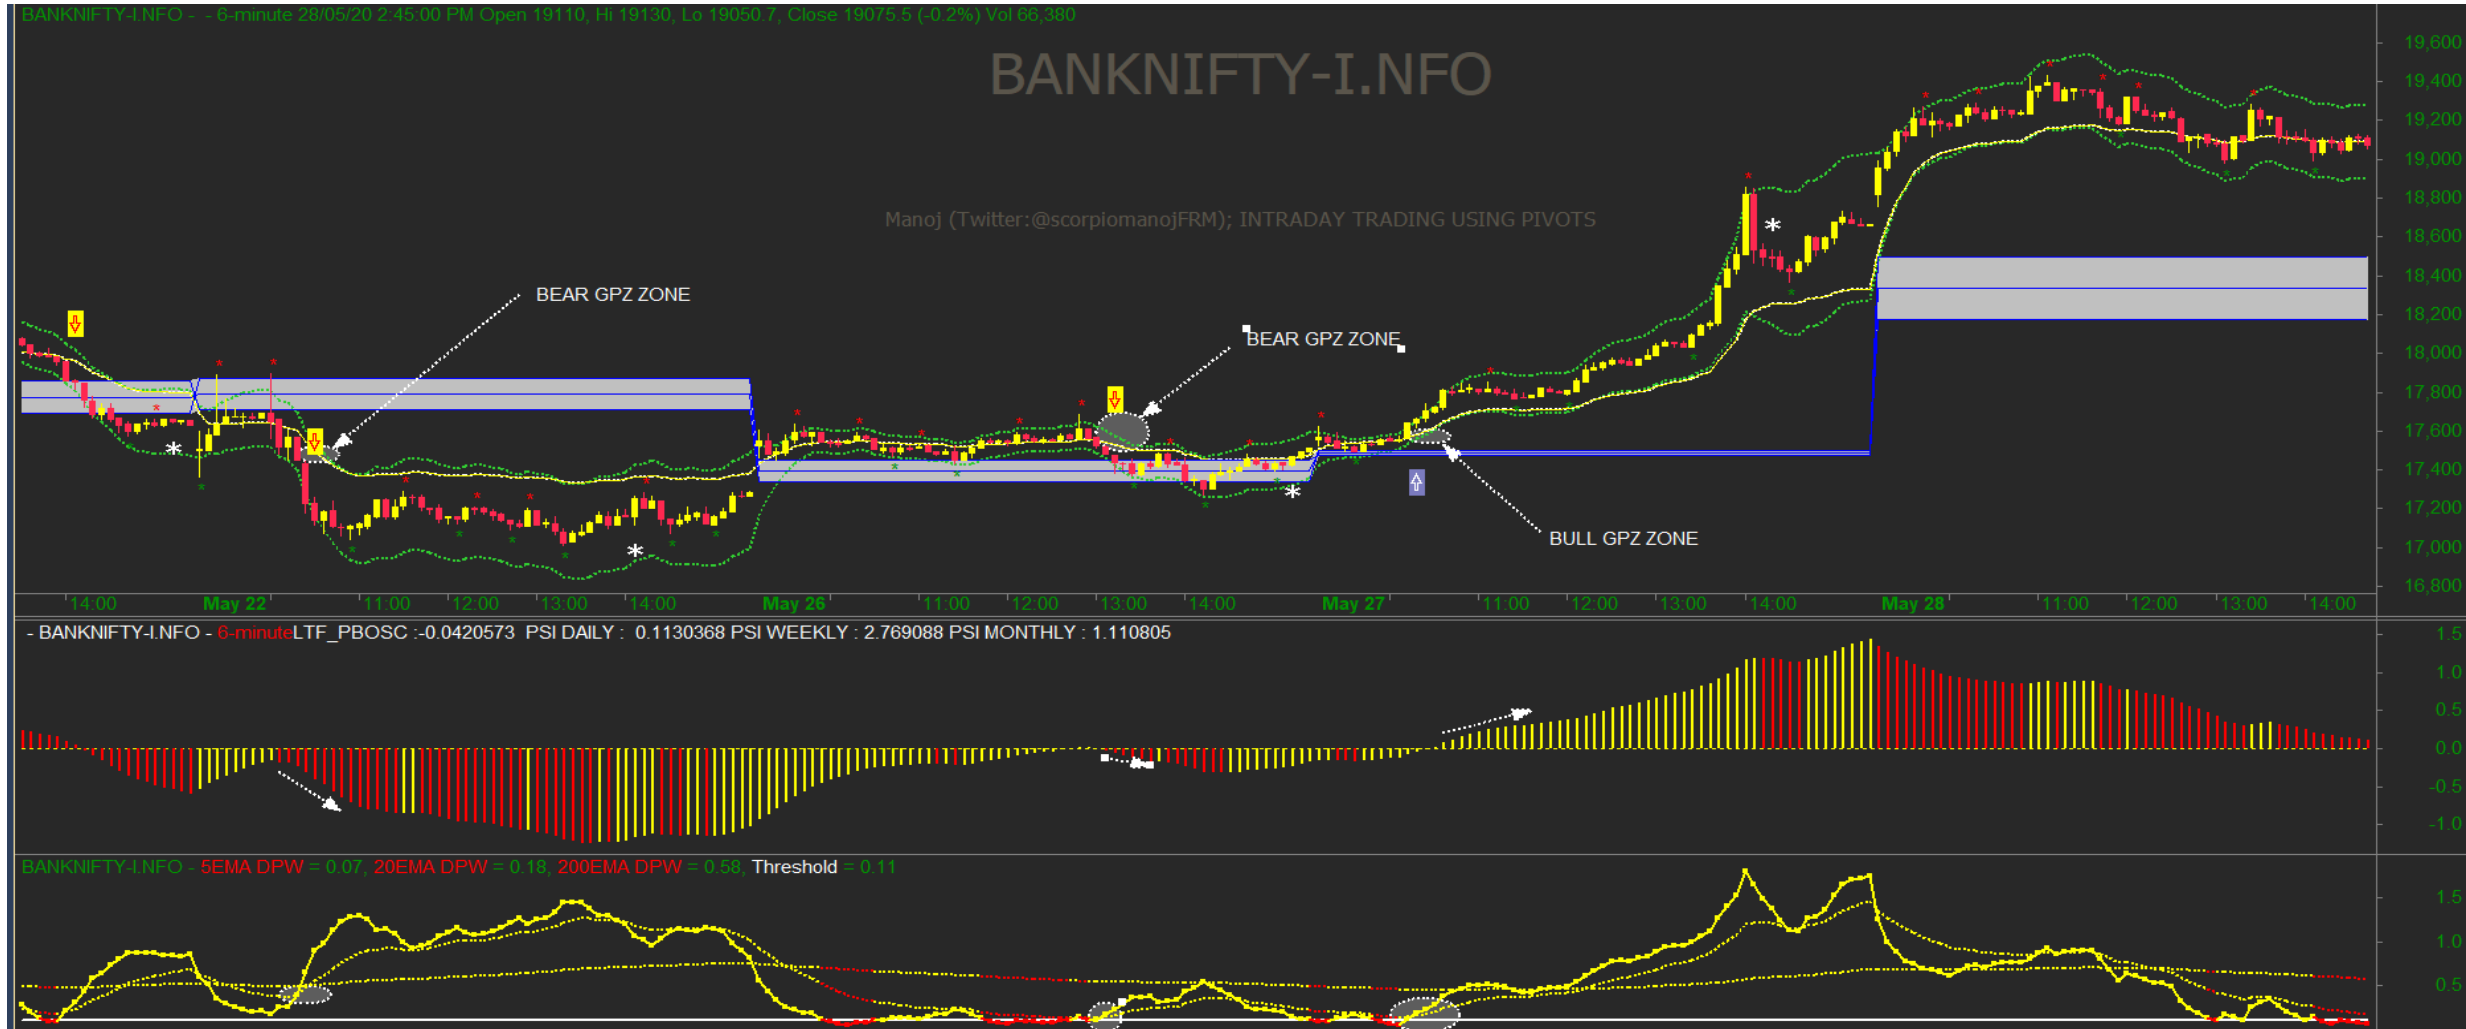

TRADING SETUPS

– DGPZ (DEVELOPING GOLDEN PIVOT ZONE TRADING STRATEGY) CAMARILLA BASED STRATEGY

- This strategy uses Golden Pivot Zone as an Entry Rule.
- GPZ is the zone where there is a confluence of Central Pivot and Camarilla S3 or R3. Bullish GPZ is a zone of confluence of Central Pivot and Camarilla S3 ; bearish GPZ is a zone of confluence of Central Pivot and Camarilla R3.
- GPZ can also be established when the Central Pivot and Camarilla R3 / S3 are developing during the day. This is called Developing GPZ.
- Long Conditions :
 - Bull DEVELOPING GPZ formation.**(PATTERN)**
 - PBOscillator and Pivot Shift Indicator upward sloping.**(MOMENTUM AND DIRECTION)**
 - Trend determination using Developing (Running) Pivot Width. Developing pivot width's 5 period ema is greater than 20 period ema and they are above threshold of 0.11 but less than 0.33 . **(TREND DETERMINANT)**
 - Close above Developing (Running) Pivot.**(TRADE LOCATION)**
 - Exit Longs if price drops below central pivot OR if price drops below developing pivot or if pboscillator/pivotshifindicator slopes downwards for a prolonged period.
 - Similar logic for Shorts.

TRADING SETUPS – DGPZ (Contd.../-)

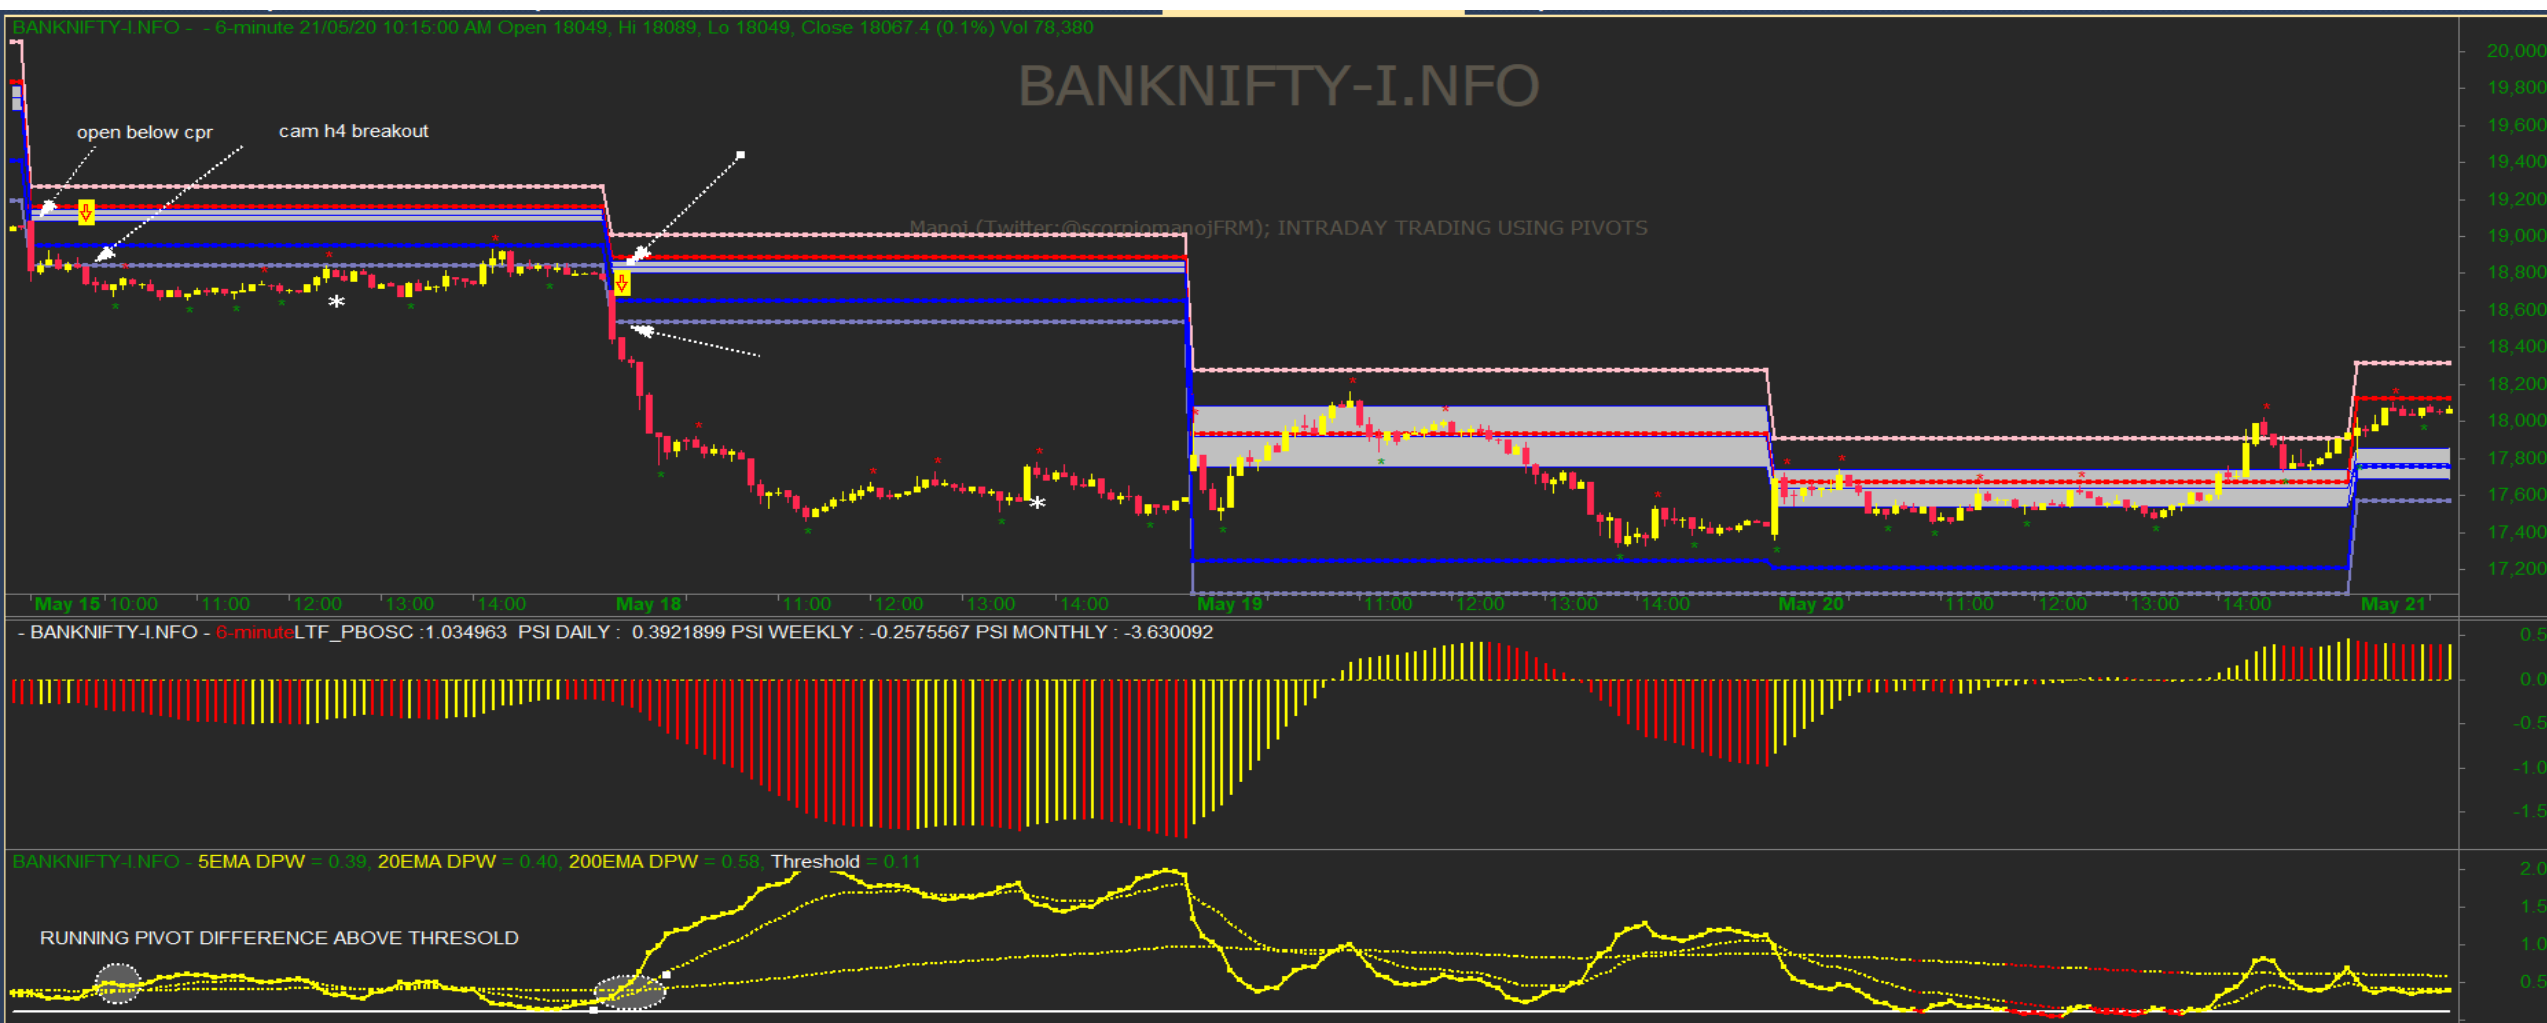

TRADING SETUPS

– CAM (CAMARILLA BREAKOUT STRATEGY)

CAMARILLA BASED STRATEGY

- CAM (Camarilla breakout Strategy) uses Camarilla R3 and S3 as the premise for the trade.
- Long condition :
 - Open should be above Central Pivot. **(PATTERN)**
 - Price should break above Camarilla R3. **(PATTERN AND MOMENTUM AND DIRECTION)**
 - Trend determination using Developing (Running) Pivot Width. Developing pivot width's 5 period ema is greater than 20 period ema and they are above threshold of 0.11 but less than 0.33 . **(TREND DETERMINANT)**
 - Stop is below Camarilla R3 or below 25 period ema whichever is earlier.

TRADING SETUPS – CAM (CONTD.../-)

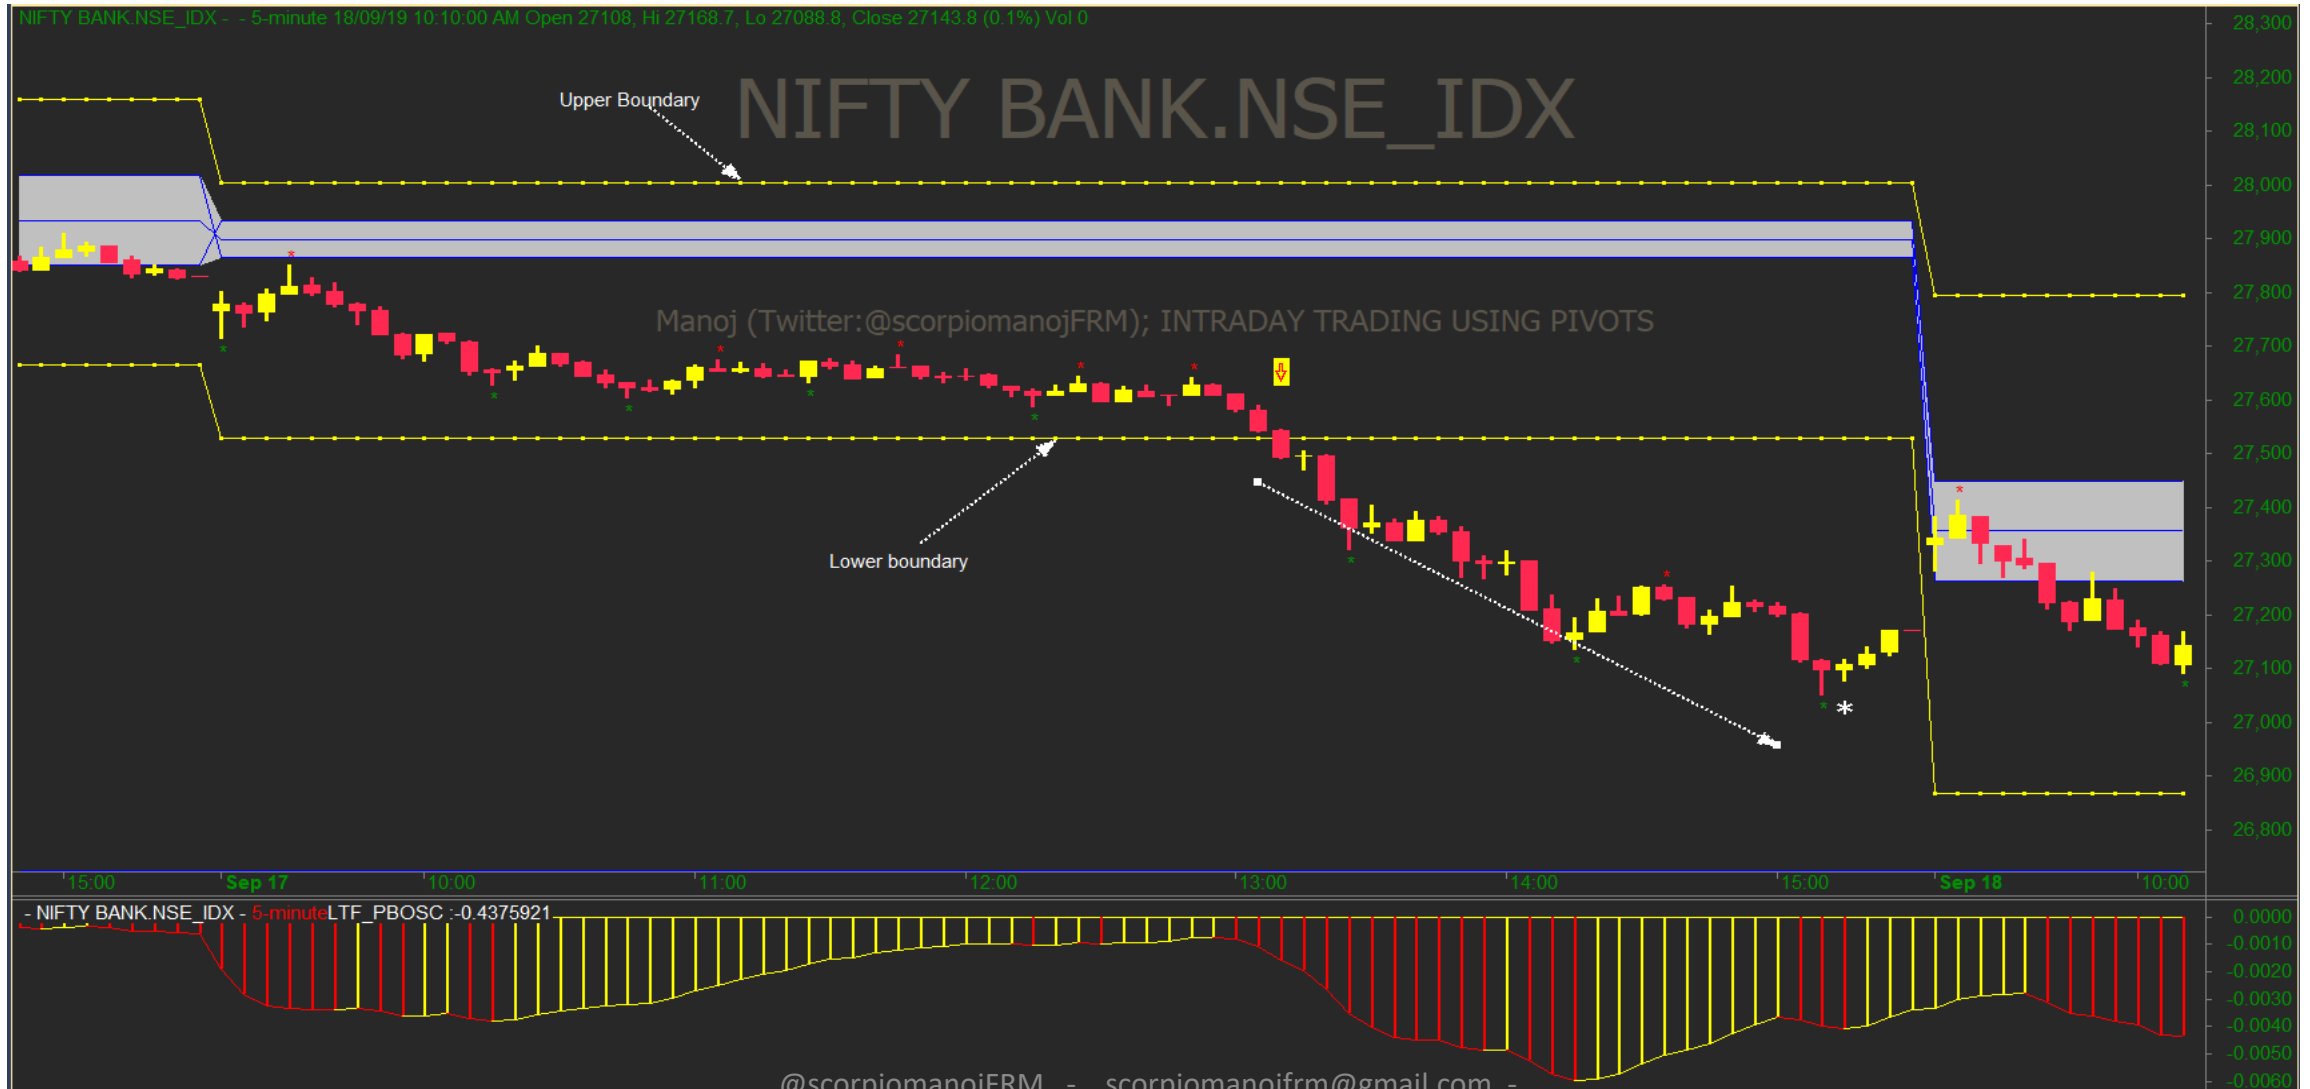

TRADING SETUPS

– VBO

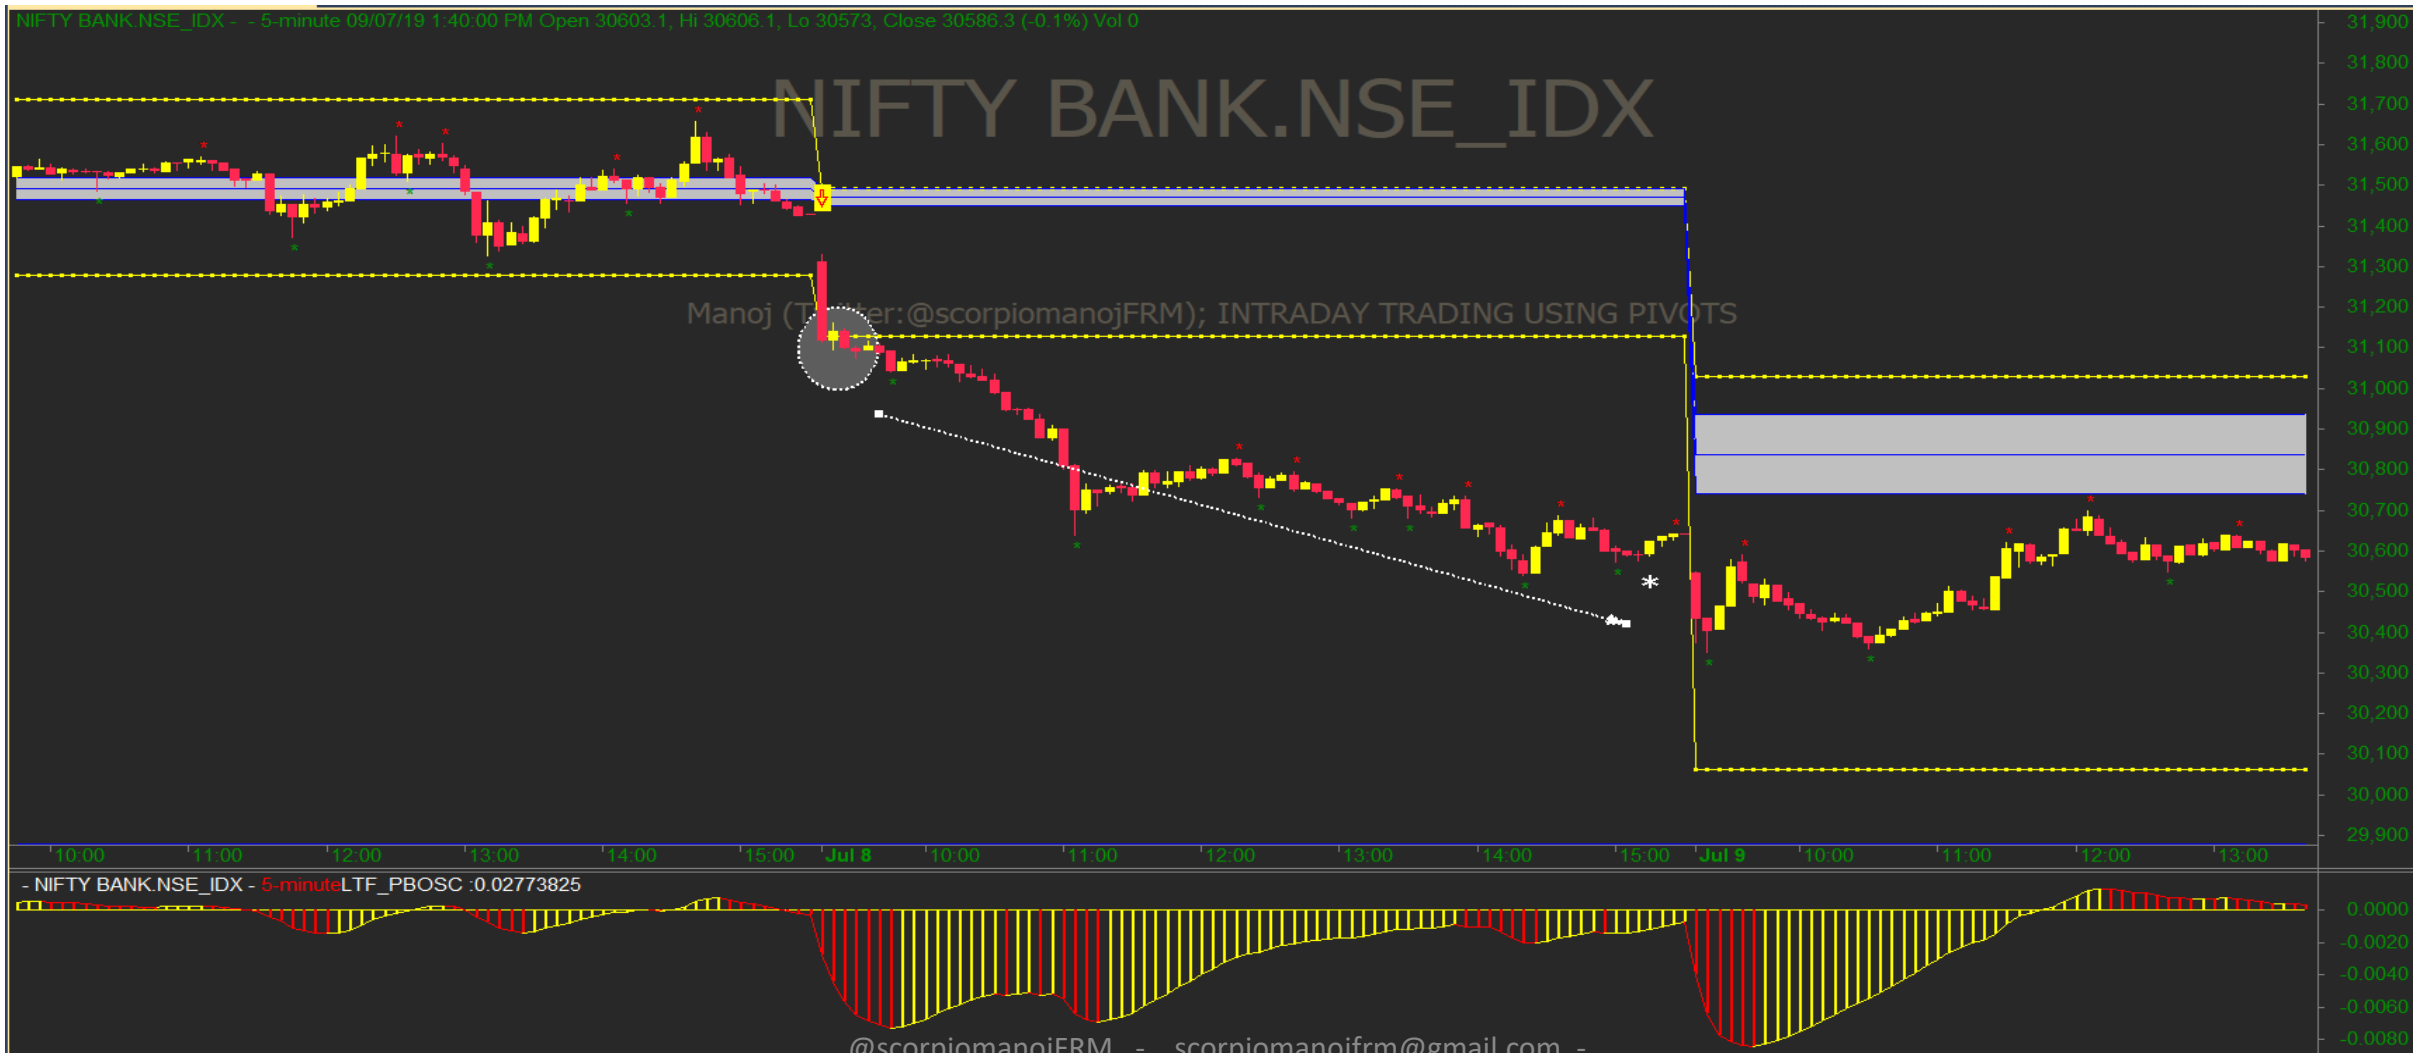

(VOLATILITY BREAKOUT STRATEGY)

- Volatility Breakout Strategy is a strategy that tries to capture contraction – expansion phenomenon. Volatility is considered to be the function of the relationship between high – Open / Open – Low. Volatility is defined as the boundary above a fraction of the difference between high and open / open and low in daily timeframe.
- Fraction for upper boundary is set differently from lower boundary as price fall is more dramatic than price rise. So essentially the idea is to capture the move relatively at an early stage and hence lower boundary is fixed at a fraction lower than higher boundary.
- This strategy ensures that you get into the trade in the middle of a trend.
- Steps are as follows :
 - Calculate the H-O difference on each day for the last 5 days.
 - Calculate the moving average of these 5 differences.
 - Multiply 0.95 times of this moving average. Add this to the open price of the trading day. This is the upper boundary.
 - Calculate the O-L difference on each day for the last 5 days.
 - Calculate the moving average of these 5 difference.
 - Multiply 0.5 times of this moving average. Subtract this to the open price of the trading day. This is the lower boundary.
 - 0.95 / 0.5 is fixed based on analysis of historical data since 2012.
 - Long setup – Price crossing above Upper Boundary and price is above Central Pivot. Exit Long when price drops below upper boundary or exit at EOD. Stop is Upper Boundary.
 - Short setup – Price crossing below Lower Boundary and price is below Central Pivot. Stop is Lower Boundary.

TRADING SETUPS – VBO (CONTD.../-)

TRADING SETUPS – VBO (CONTD.../-)

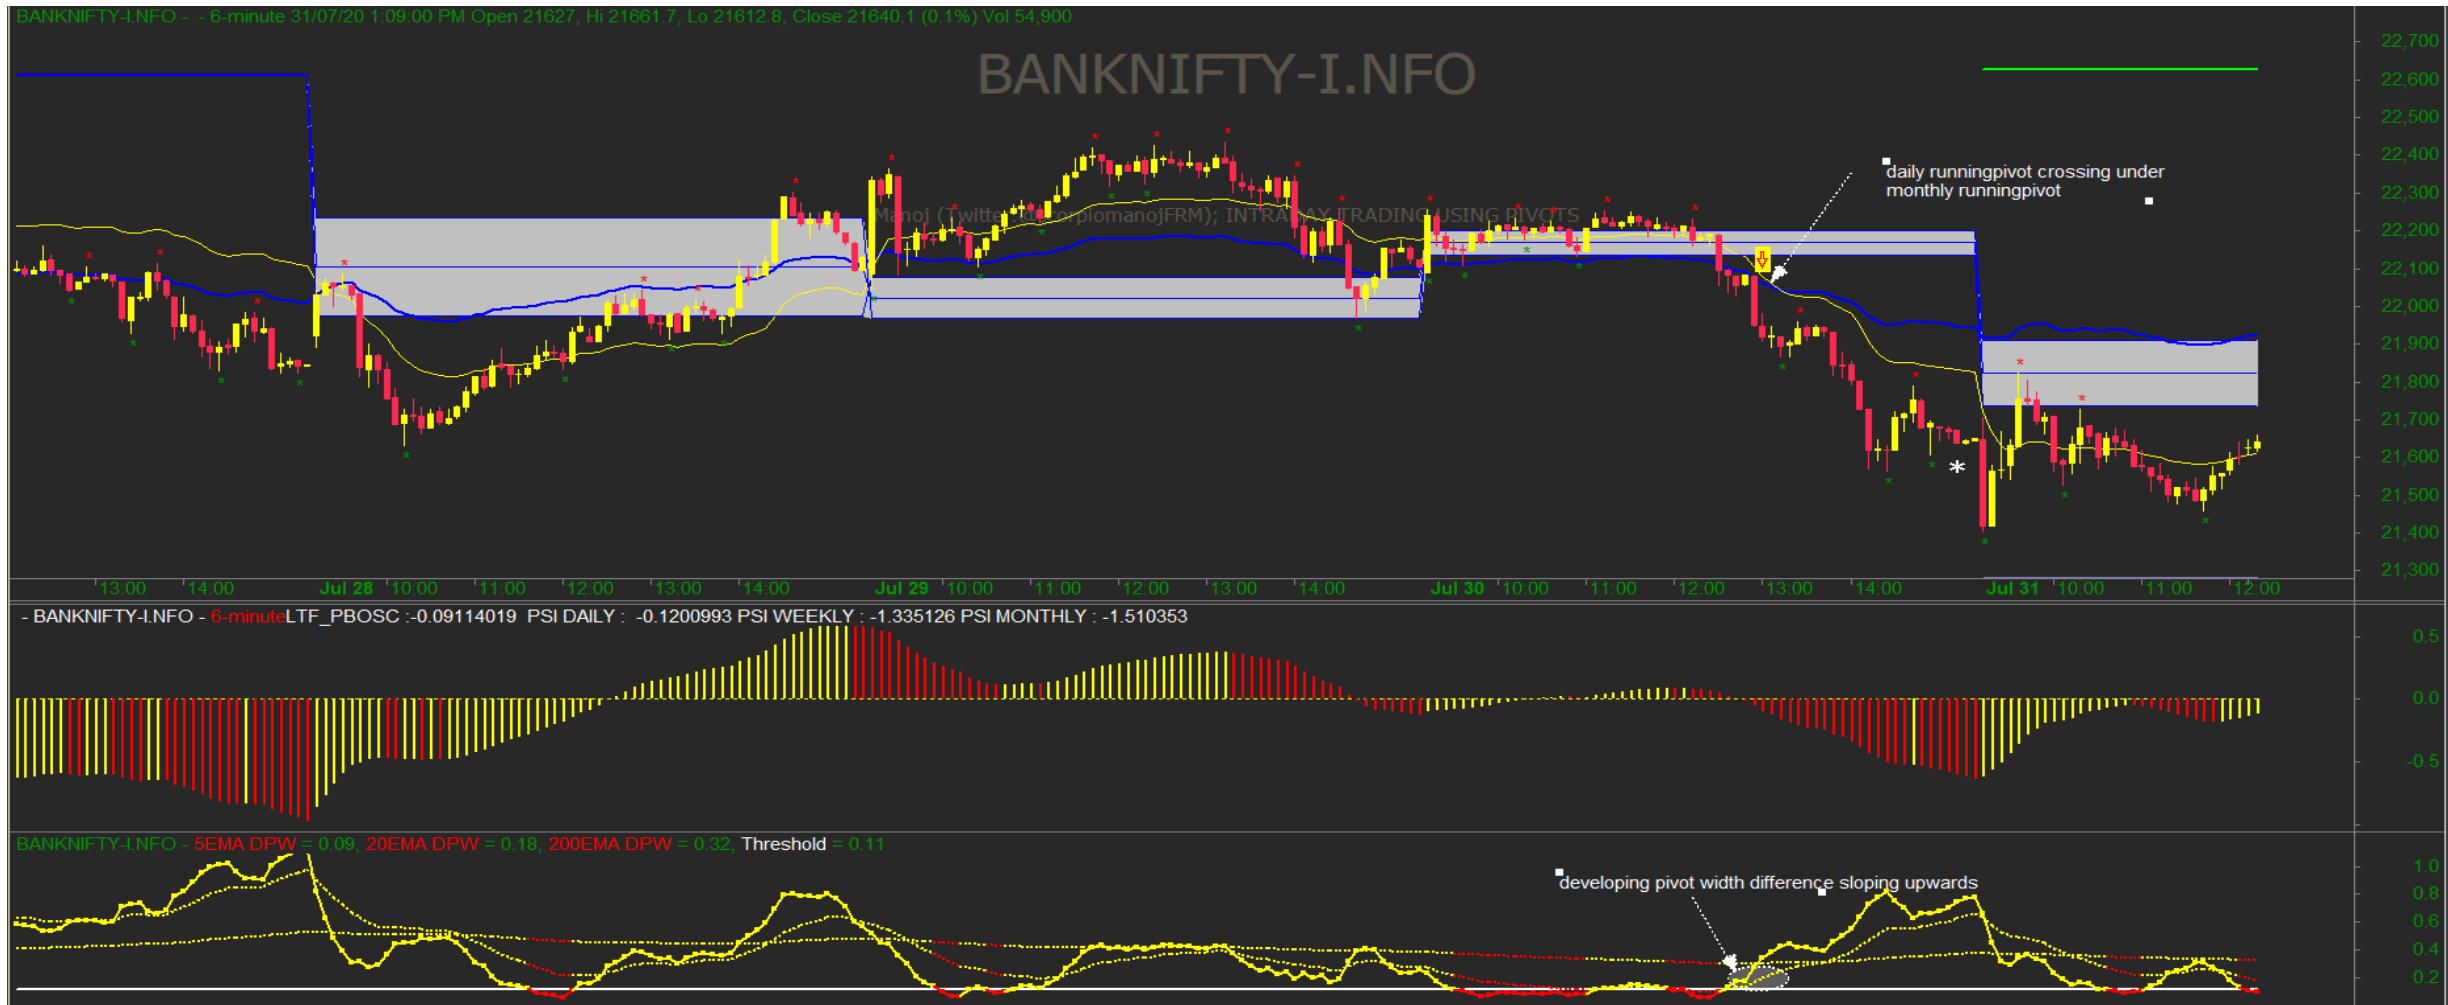

TRADING SETUPS – DMRPcross (DAILY MONTHLY RUNNING PIVOT CROSS TRADING STRATEGY)

DEVELOPING PIVOT BASED STRATEGY

- This strategy uses combination of Daily running pivot (developing pivot) and Monthly running pivot.
- This strategy does not appear frequently. If it appears it usually gives a good trade.
- Long Conditions :
 - Crossover of Daily running pivot over monthly running pivot. (**Momentum and Direction**)
 - Trend determination using Developing (Running) Pivot Width. Developing pivot width's 5 period ema is greater than 20 period ema and they are above threshold of 0.11 but less than 0.33 . (**TREND DETERMINANT**)
 - Exit Longs if price drops below daily running pivot.
 - Similar logic for Shorts.

TRADING SETUPS – DMRPcross (CONTD.../-)

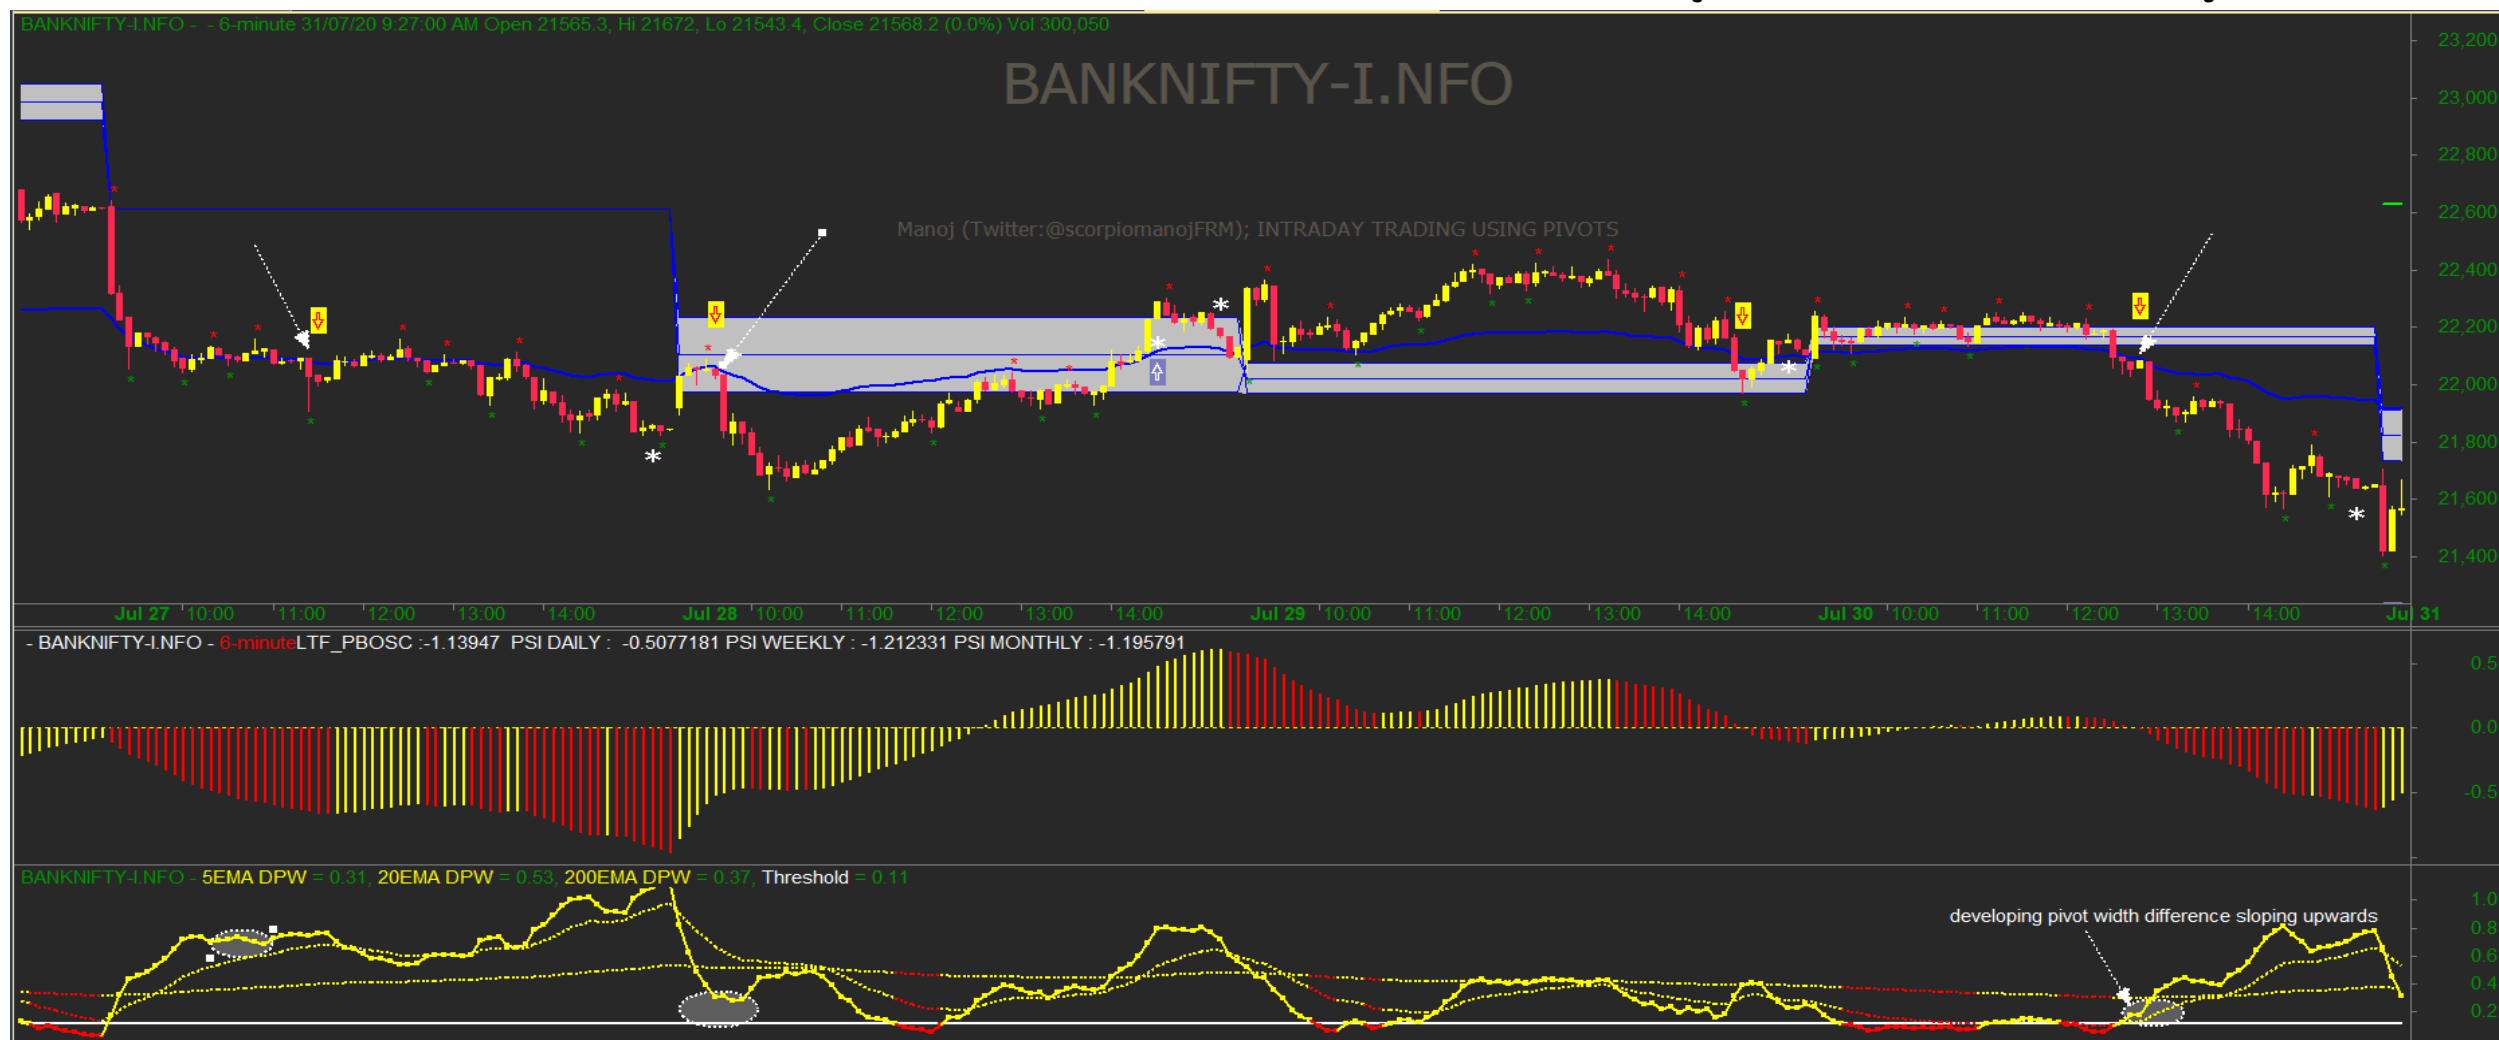

TRADING SETUPS – MRPcross (MONTHLY RUNNING PIVOT CROSS TRADING STRATEGY)

DEVELOPING PIVOT BASED STRATEGY

- This strategy uses Monthly running (developing) pivot.
- Long Conditions :
 - Crossover of price (preferably low) over monthly running pivot. (**Momentum and Direction**)
 - Trend determination using Developing (Running) Pivot Width. Developing pivot width's 5 period ema is greater than 20 period ema and they are above threshold of 0.11 but less than 0.33 . (**TREND DETERMINANT**)
 - Exit Longs if price drops below monthly running pivot.
 - Similar logic for Shorts.

TRADING SETUPS – MRPcross (CONTD.../-)

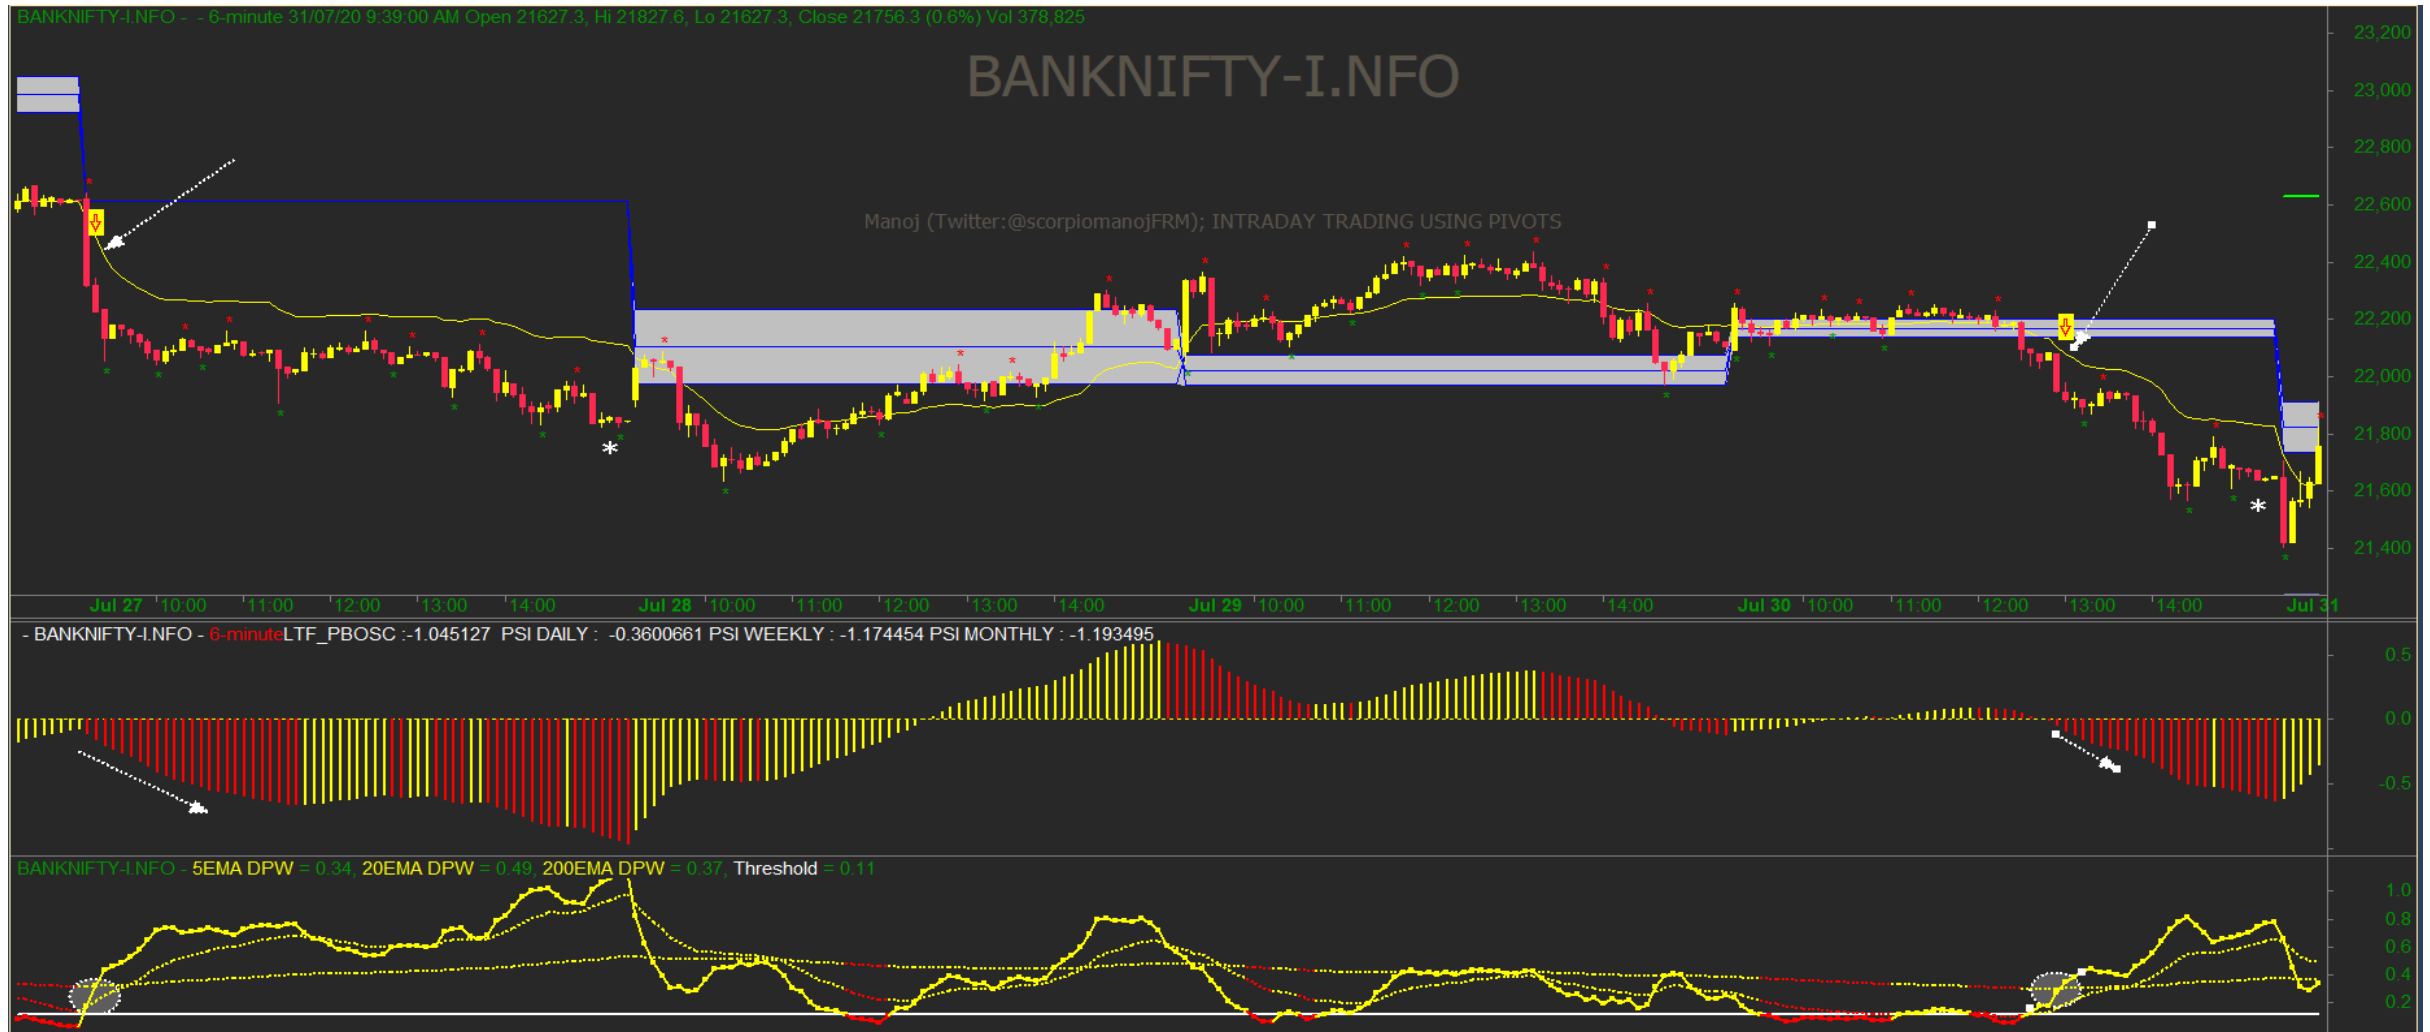

TRADING SETUPS – DRPcross (DAILY RUNNING PIVOT CROSS TRADING STRATEGY)

DEVELOPING PIVOT BASED STRATEGY

- This strategy uses Daily running (developing) pivot.
- Long Conditions :
 - Crossover of price (preferably low) over daily running pivot. (**Momentum and Direction**)
 - Trend determination using Developing (Running) Pivot Width. Developing pivot width's 5 period ema is greater than 20 period ema and they are above threshold of 0.11 but less than 0.33 . (**TREND DETERMINANT**)
 - Pivot shift indicator sloping upwards. (Momentum and Direction)
 - Exit Longs if price drops below daily running pivot.
 - Similar logic for Shorts.

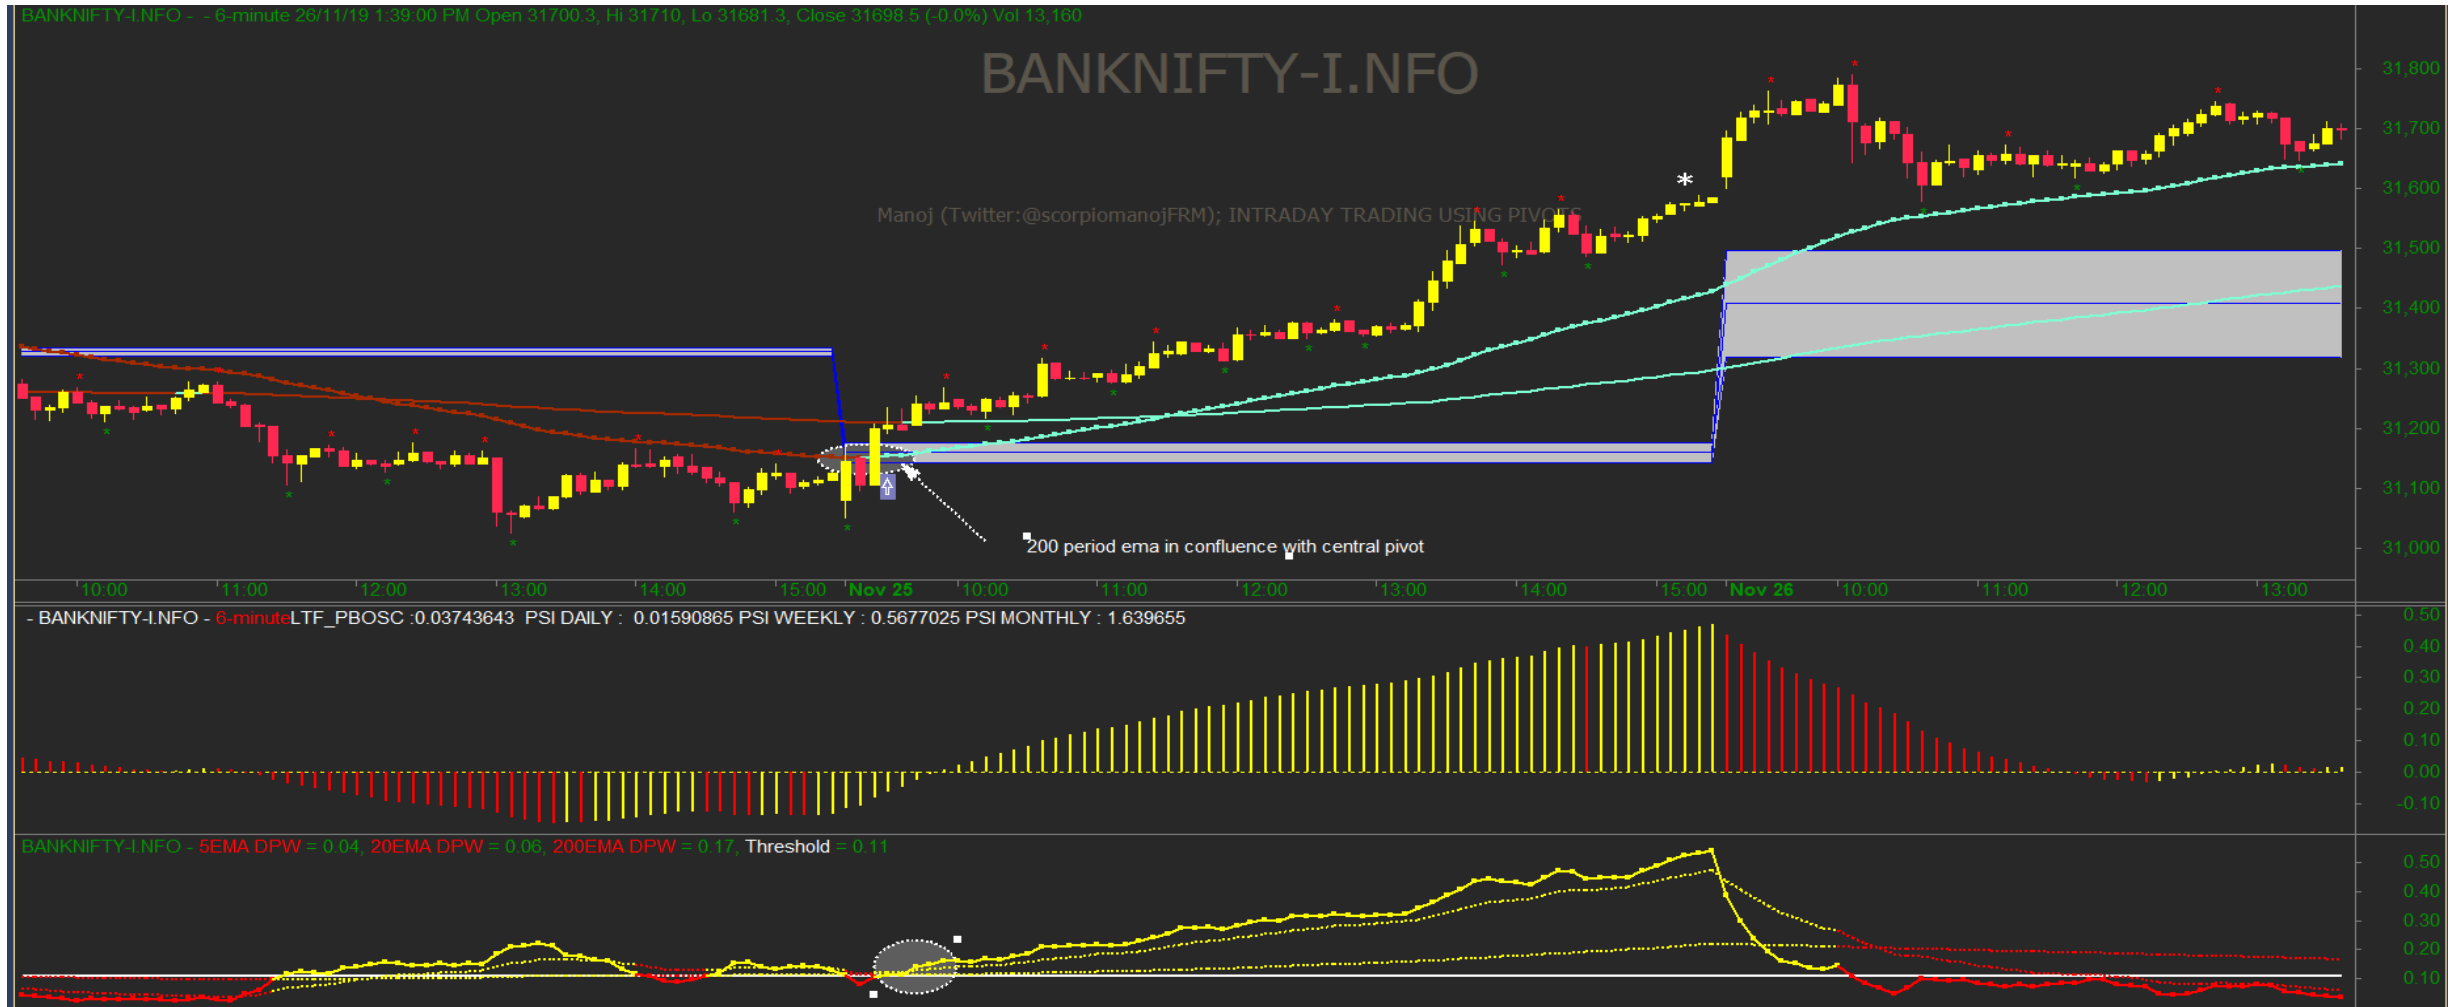

TRADING SETUPS – DRPcross (CONTD.../-)

TRADING SETUPS – (PEMA TRADE)

- This strategy uses 50 period ema / 200 period ema with Central Pivot.
- Long Conditions :
 - Pivot should be confluencing with either 50 period EMA or 200 period EMA. (**PATTERN**)
 - Trend determination using Developing (Running) Pivot Width. Developing pivot width's 5 period ema is greater than 20 period ema and they are above threshold of 0.11 but less than 0.33 . (**TREND DETERMINANT**)
 - Price should cross above Central pivot but should be less than Pivot R1. (**MOMENTUM AND DIRECTION**)
 - Exit if price drops below Central Pivot.

TRADING SETUPS – PEMATRADE (CONTD.../-)

TRADING SETUPS – (AOPM TRADE)

- This strategy enables you to be in the direction of professionals based on the momentum post lunch session (after 1pm).
- Long Conditions :
 - Breakout of the range that was formed till 2 pm. (MOMENTUM AND DIRECTION).
 - Price should be above supertrend.
 - Trend determination using Developing (Running) Pivot Width. Developing pivot width's 5 period ema is greater than 20 period ema and they are above threshold of 0.11 but less than 0.33 . **(TREND DETERMINANT)**
 - Exit if price drops below breakout level or below supertrend level.
 - Similar logic is for Shorts.

TRADING SETUPS – AOPM (CONTD.../-)

TRADING SETUPS – (MUPS SWING TRADE)

- Concept similar to MUPS intraday trade with a slight variation.

- Long Conditions :

- Direction and Momentum

- Three continuous green candles OR
 - Weekly / Monthly TC crosses above BC OR
 - Price crosses Weekly or Monthly Pivot.

AND

- Direction and Momentum

- Daily, two day, weekly and monthly Pivot Shift sloping upwards .
 - Price above daily, two day and weekly running upper pivot.

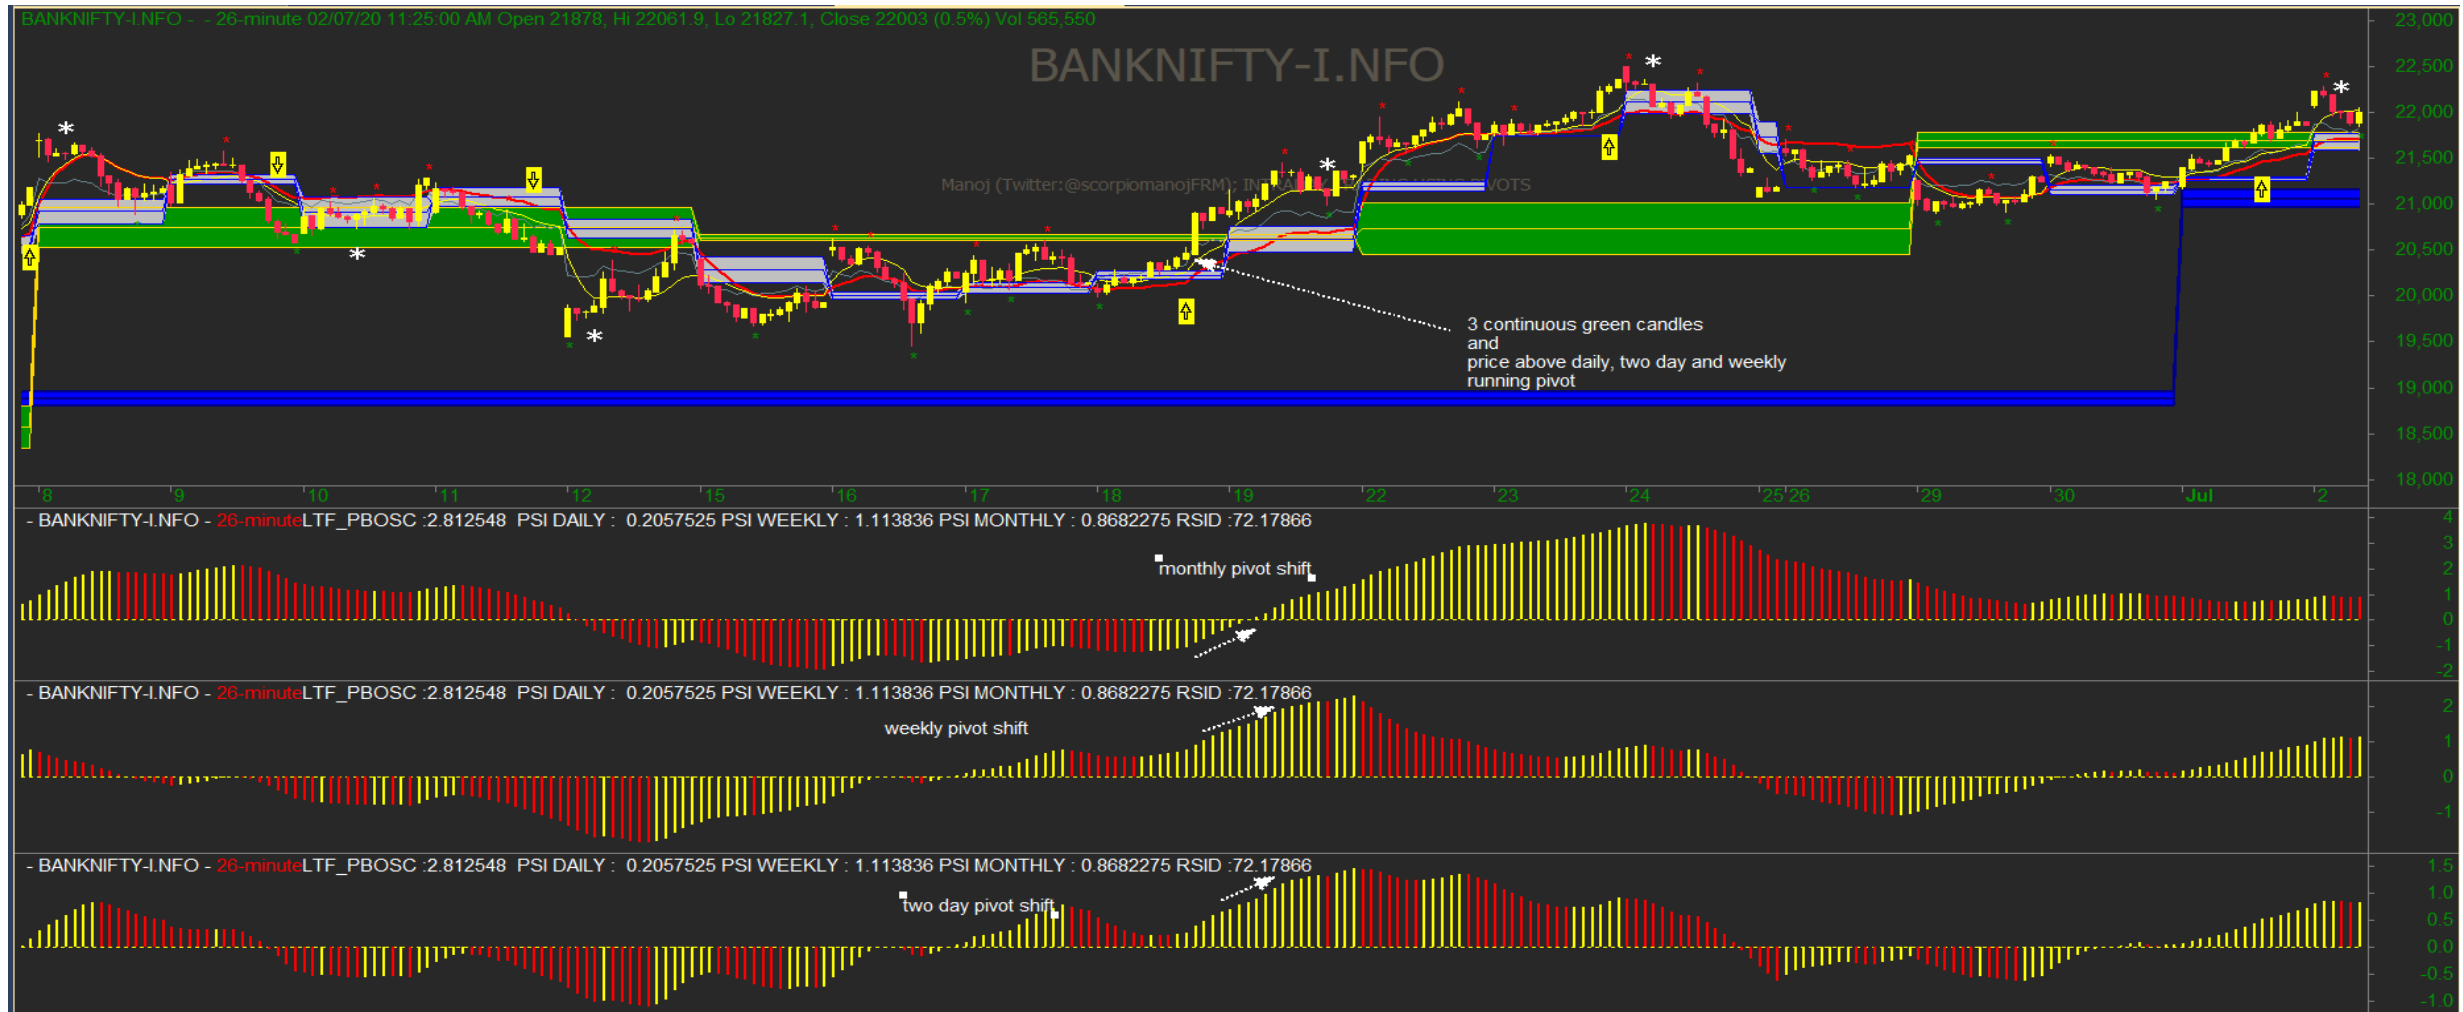

AND

- Exit if price drops below running weekly pivot or below daily central pivot or if Weekly TC drops below BC or if pivot shift indicator is sloping downwards.

AND

- Similar logic for Shorts.

TRADING SETUPS – MUPS SWING (CONTD.../-)

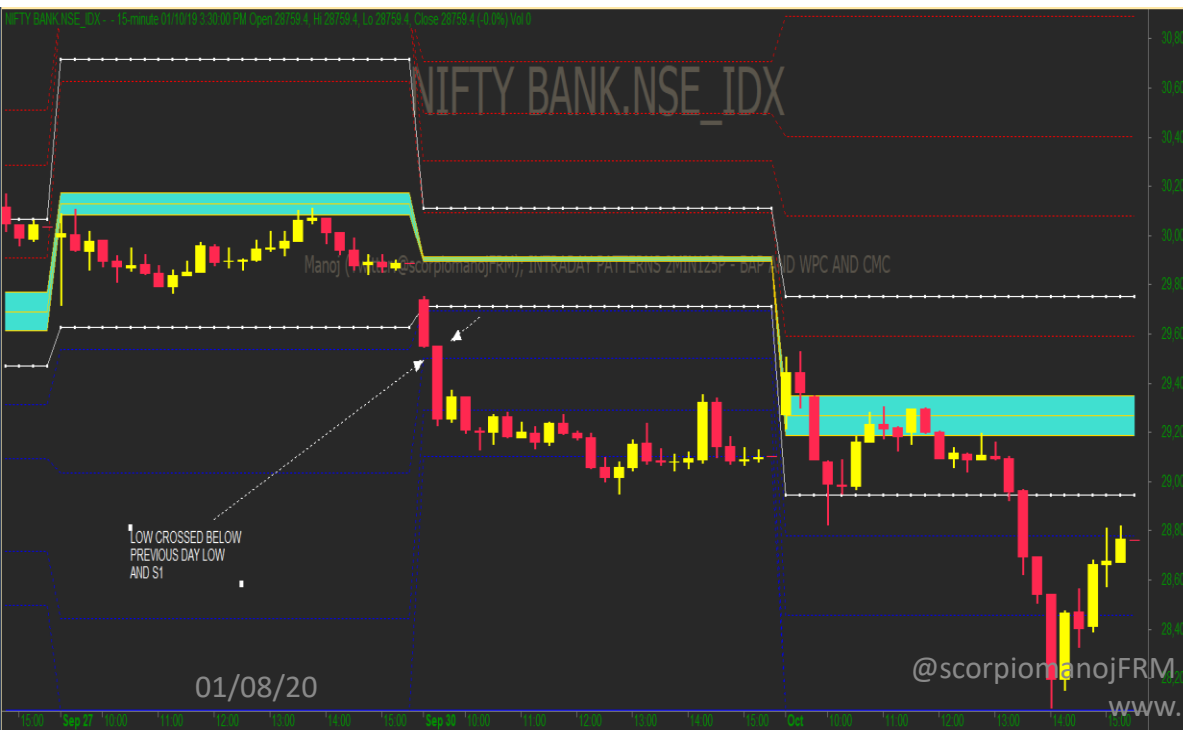

VIII) OTHER TRADING SETUPS – GRADE B

- Break Away Play (BAP)
- Magnet Trade (MT)
- CPR breakout (CPRBO / CPRVL)
- Combo breakout / Reversal (CBO / CRVL)
- 200ema breakout (TEBO)
- Golden Pivot Zone (GPZBO / GPZRVL)
- Camarilla RH reversals (CAMRVL)
- 1D2D pivot trade
- SCR / LUR (Already discussed in slides 32-36)
- Zero One Two (ZOT)
- Failed Breakout Strategy (FBO)

TRADING SETUPS – BREAKAWAY PLAY

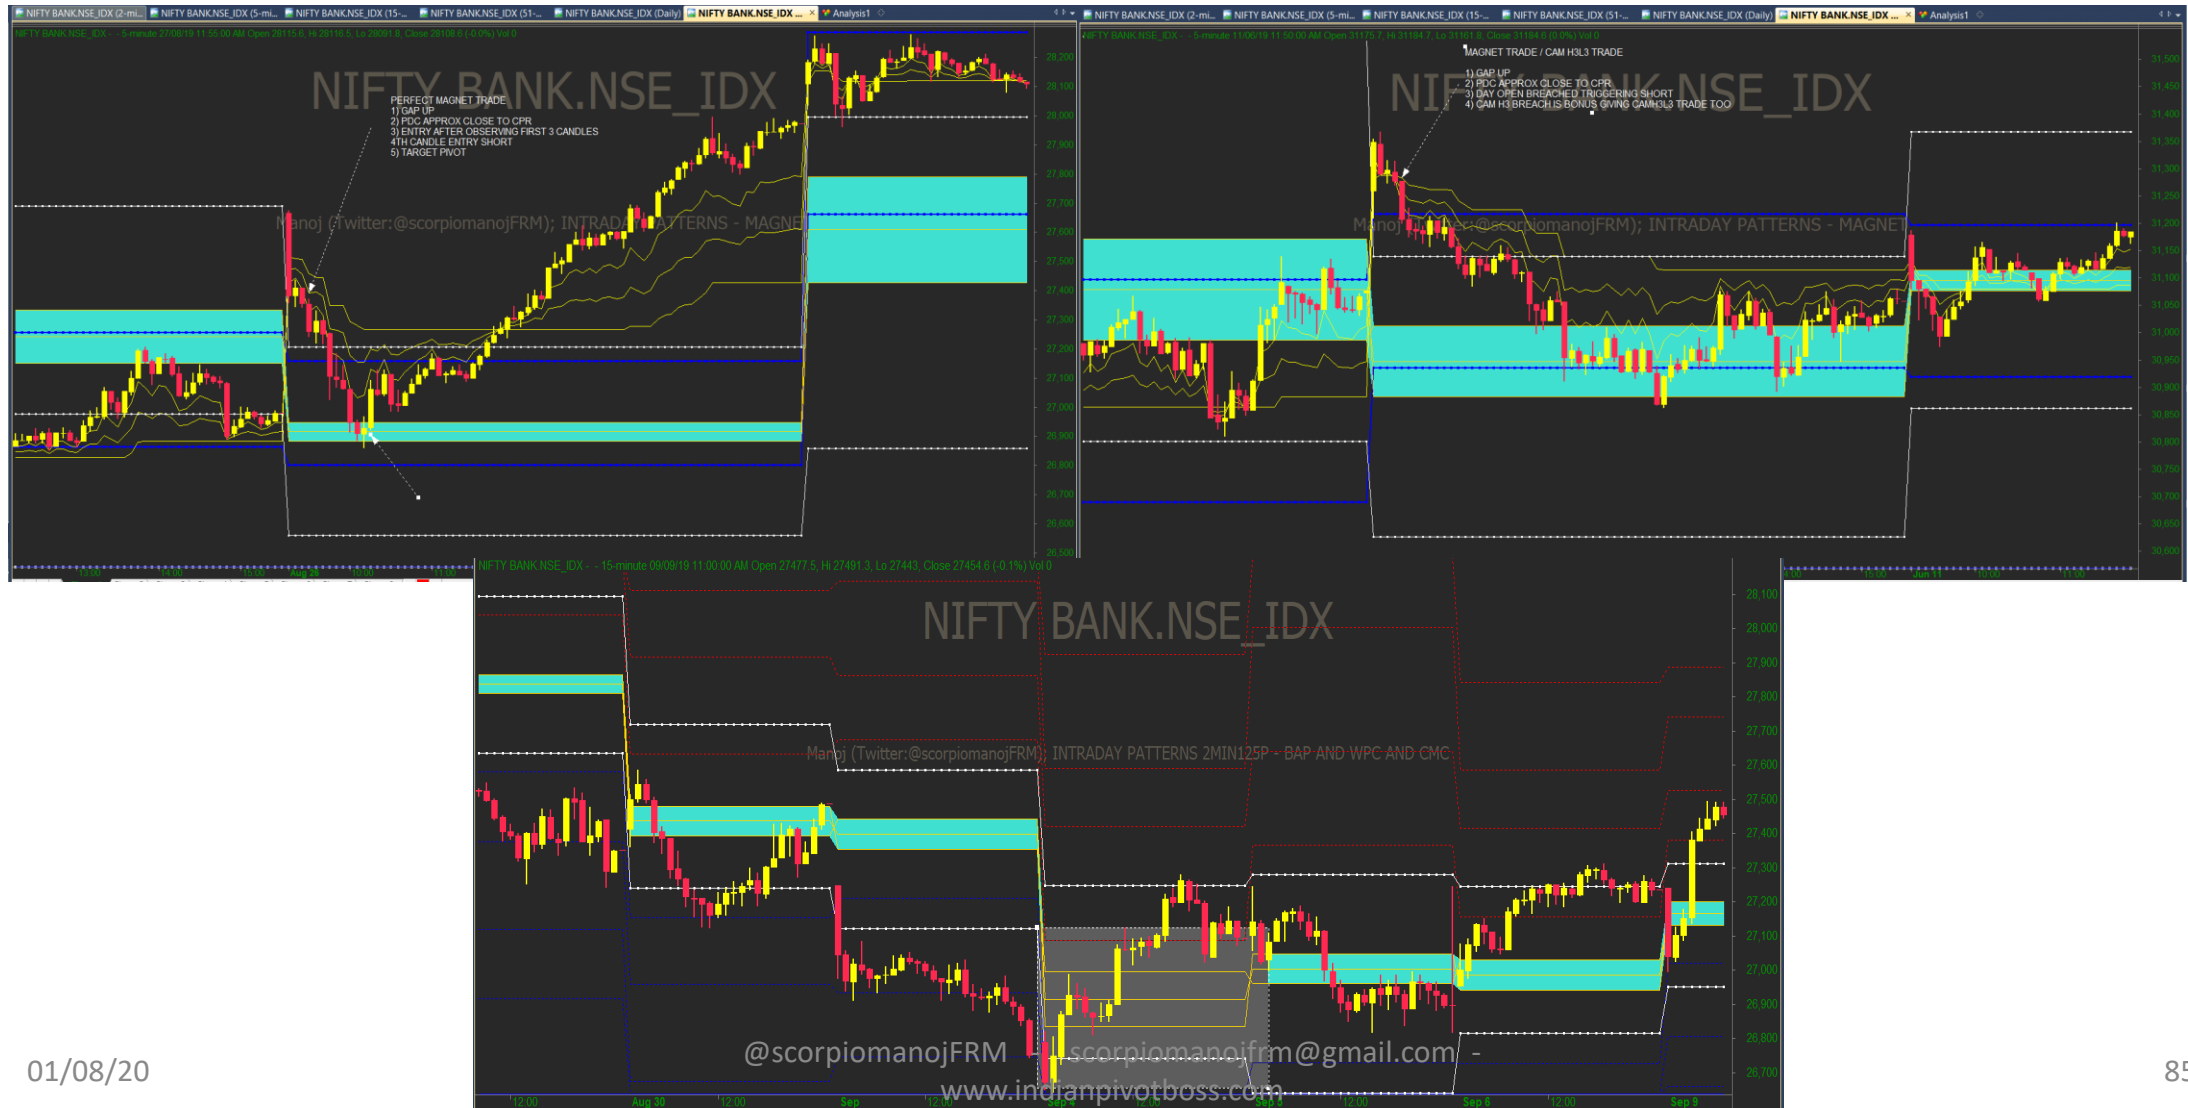

- Pre-requisite – Narrow pivot width
- Buy Setup – High crosses pivot R1 and also PDH ; Stop if Low crosses either R1 or PDH whichever is lower; Target – Usually day close , but suggest trailing previous candle low.
- Short Setup – Low crosses pivot S1 and also PDL; Stop if High crosses either S1 or PDL whichever is higher; Target – Usually day close, but suggest trailing previous candle high.
- Advantages – Usually will give good profits. Hence aggressive position sizing suggested.

TRADING SETUPS – MAGNET TRADE

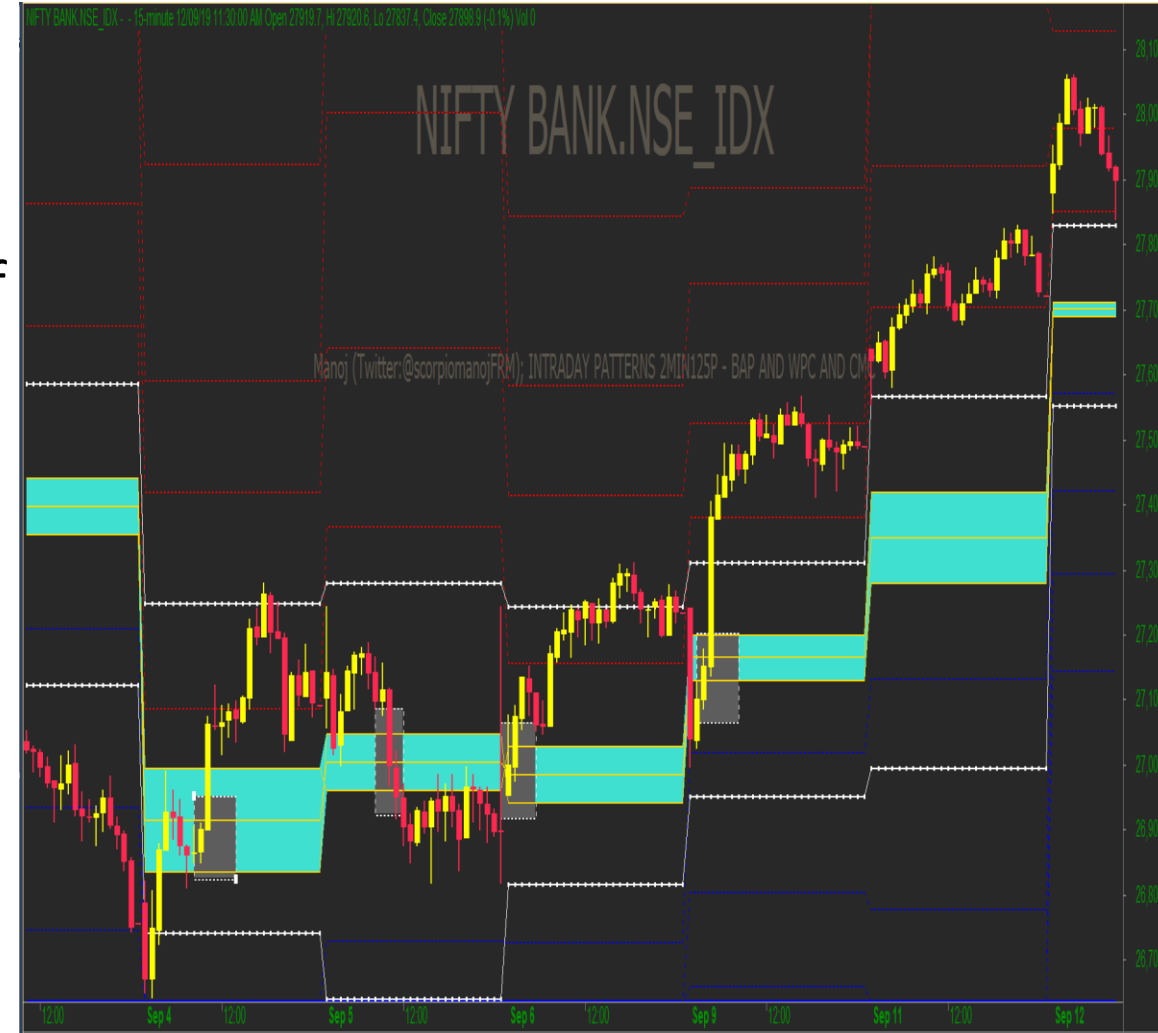

- Pre-requisite : Previous day close should not be very far from the CPR for the next day.
- Buy setup :
 - Gap down to the nearest support
 - Any of the reversal pattern (ERS, PB, ORS)
 - Buy above the high of reversal candle.
 - Stop – low of the reversal candle / Target – Central Pivot
- Short setup :
 - Gap up to the nearest resistance
 - Any of the reversal pattern (ERS, PB, ORS)
 - Buy below the low of reversal candle.
 - Stop – high of the reversal candle / Target – Central Pivot

TRADING SETUPS – MAGNET TRADE

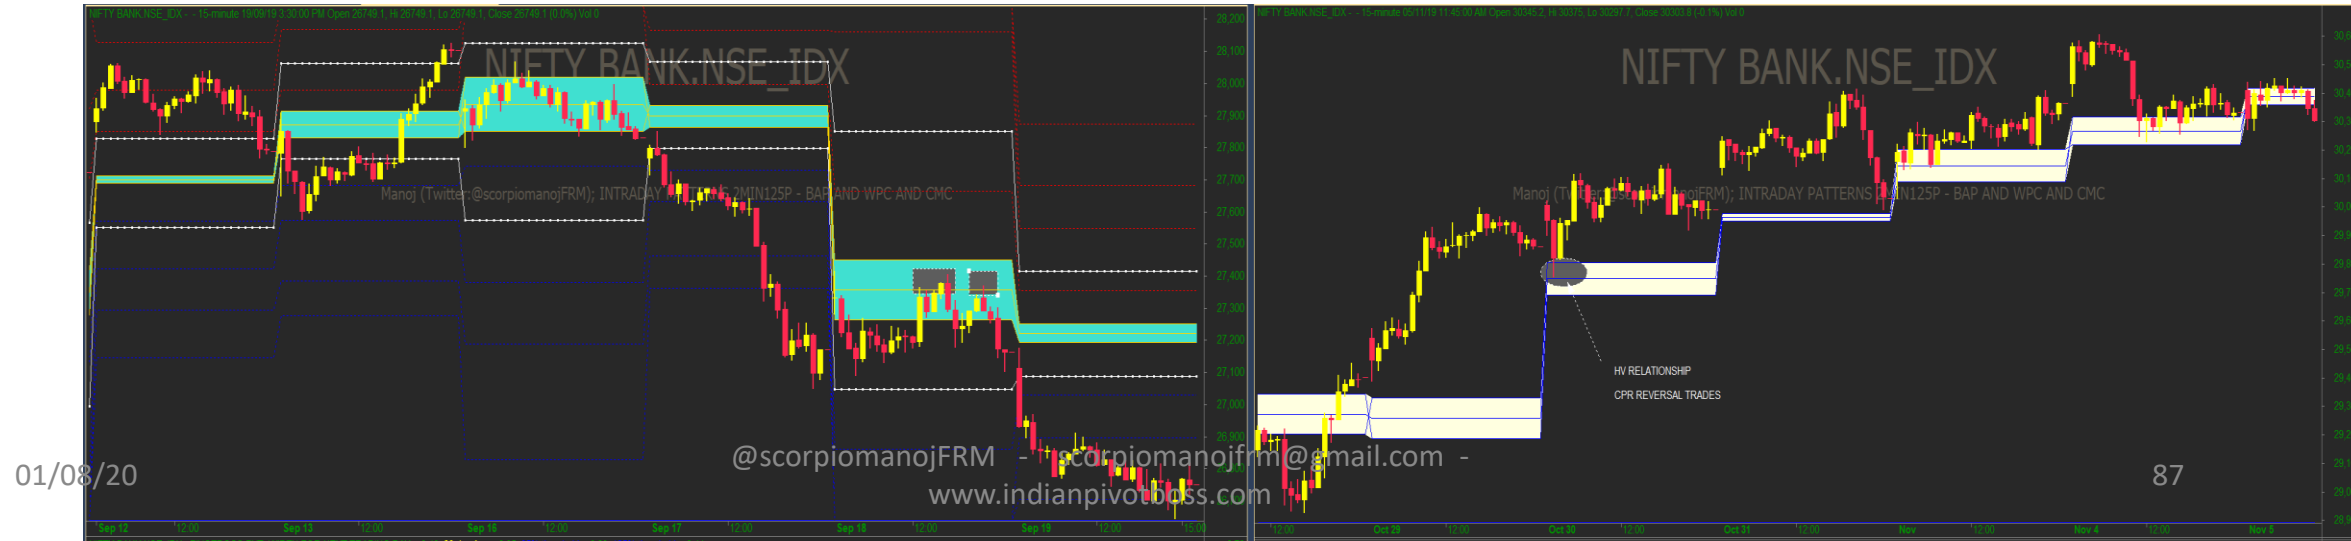

TRADING SETUPS – CPRBO

- Pre-requisite :
 - Wider Previous day High Low range
 - Wait for first 15 min before committing.
 - Preferably showing a HV relationship in case of longs / LV relationship in case of shorts, which means that a CPRBO validates the longer term trend relationship.
- Buy setup :
 - Buy when price crosses up Central Pivot / Stop – Lower CPR / Target PDH.
 - Short when price crosses down Central Pivot / Stop – Higher CPR / Target PDL.

TRADING SETUPS – CPRRVL

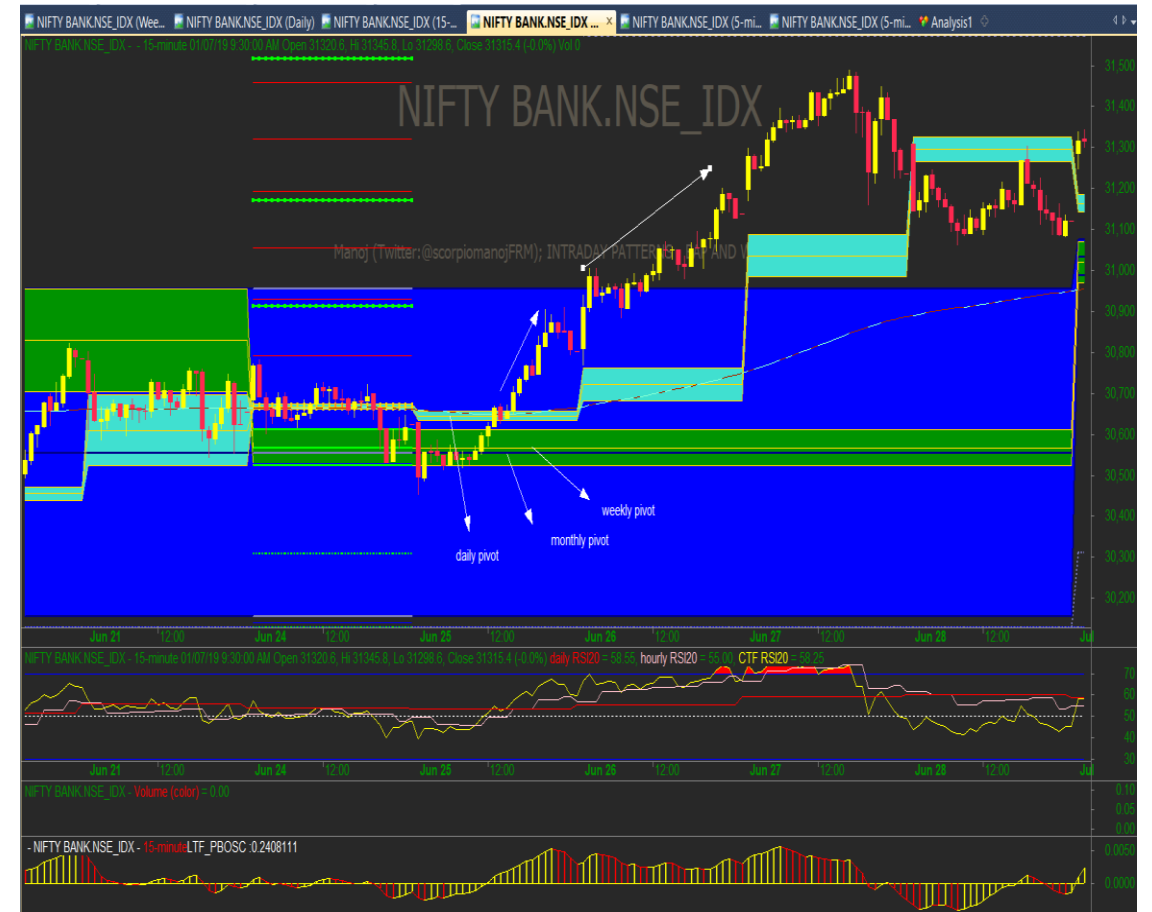

- Setup
 - Buy
 - HV CPR relationship + when you observe any reversal price action (ERS/PB/ORS) at pivots
 - Target – closest resistances like PDH / R1 whichever is lower
 - Stop – Lower CPR
 - Short
 - LV CPR relationship + when you observe any reversal price action at pivots
 - Target – closest supports like PDL / S1 whichever is higher
 - Stop – Higher CPR.

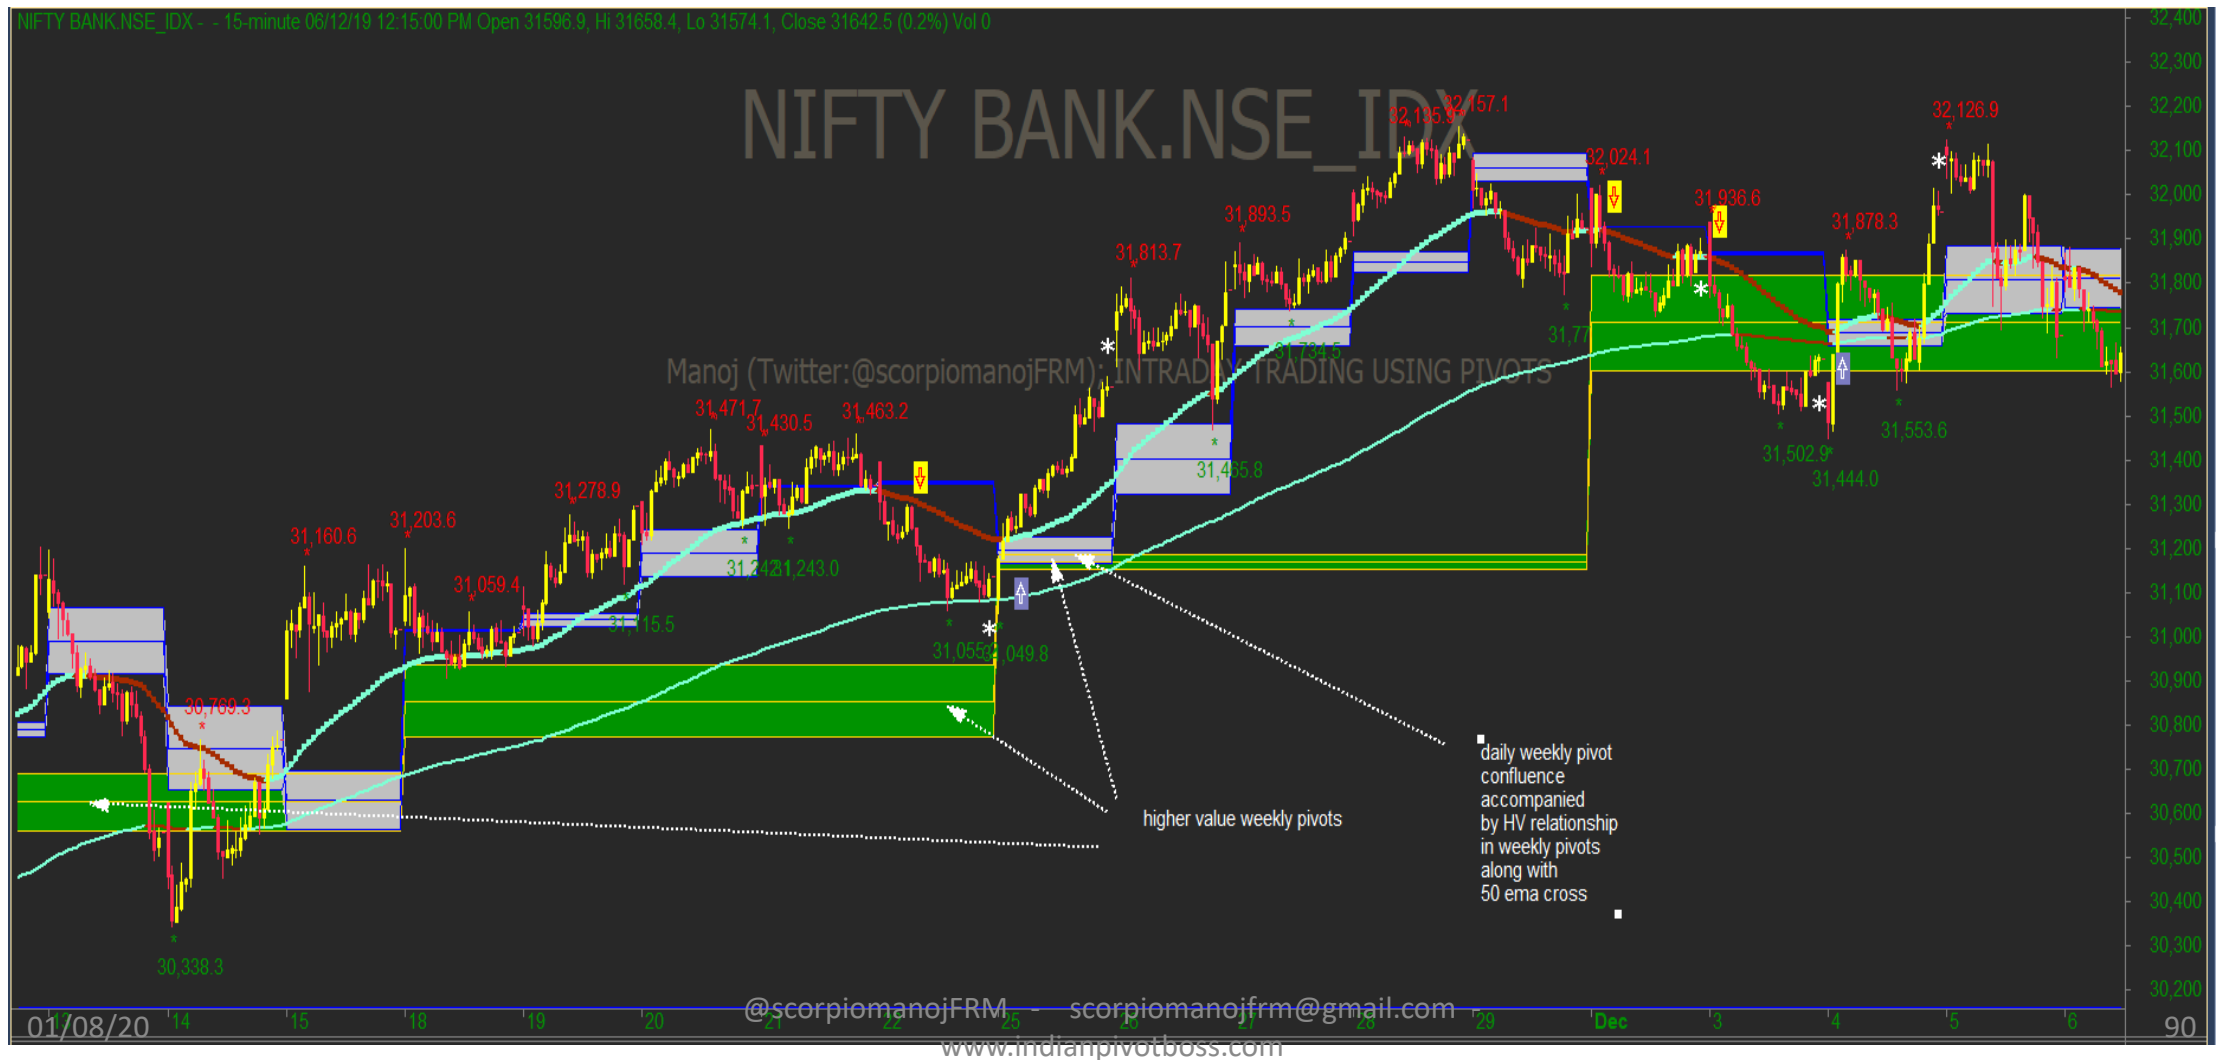

TRADING SETUPS - COMBO BREAKOUT

- Daily pivot in confluence with Weekly / Monthly pivots.
- Very powerful when there is an higher value relationship in HTF pivots (for example) and daily and weekly confluencing and price crossing above confluence zone, in case of long setups (reverse is for short setups). Any moving average (200ema, 50 ema, etc) confluence will add strength to the setups.
- Another powerful feature is that if there is an higher value relationship in HTF pivots (for example Weekly pivots) and price dropping below Weekly Pivot at the beginning of the week, it opens up an LUR setup in HTF pivot. A daily weekly confluence along with an LUR setup in HTF pivot is a effective short setup . (Reverse is true for short setup).
- Higher Time Frame market participants participation.
- Likely rally.
- Buy setup triggers if price moves past higher time frame Central Pivots / along with Lower time frame Central pivots / Stop is the highest or lowest of the Central pivots (position size varies) / Target usually is close of the day but can trail above R1.
- Short setup is the reverse.

TRADING SETUPS – COMBO BREAKOUT

TRADING SETUPS – COMBO BREAKOUT (CONTD...)

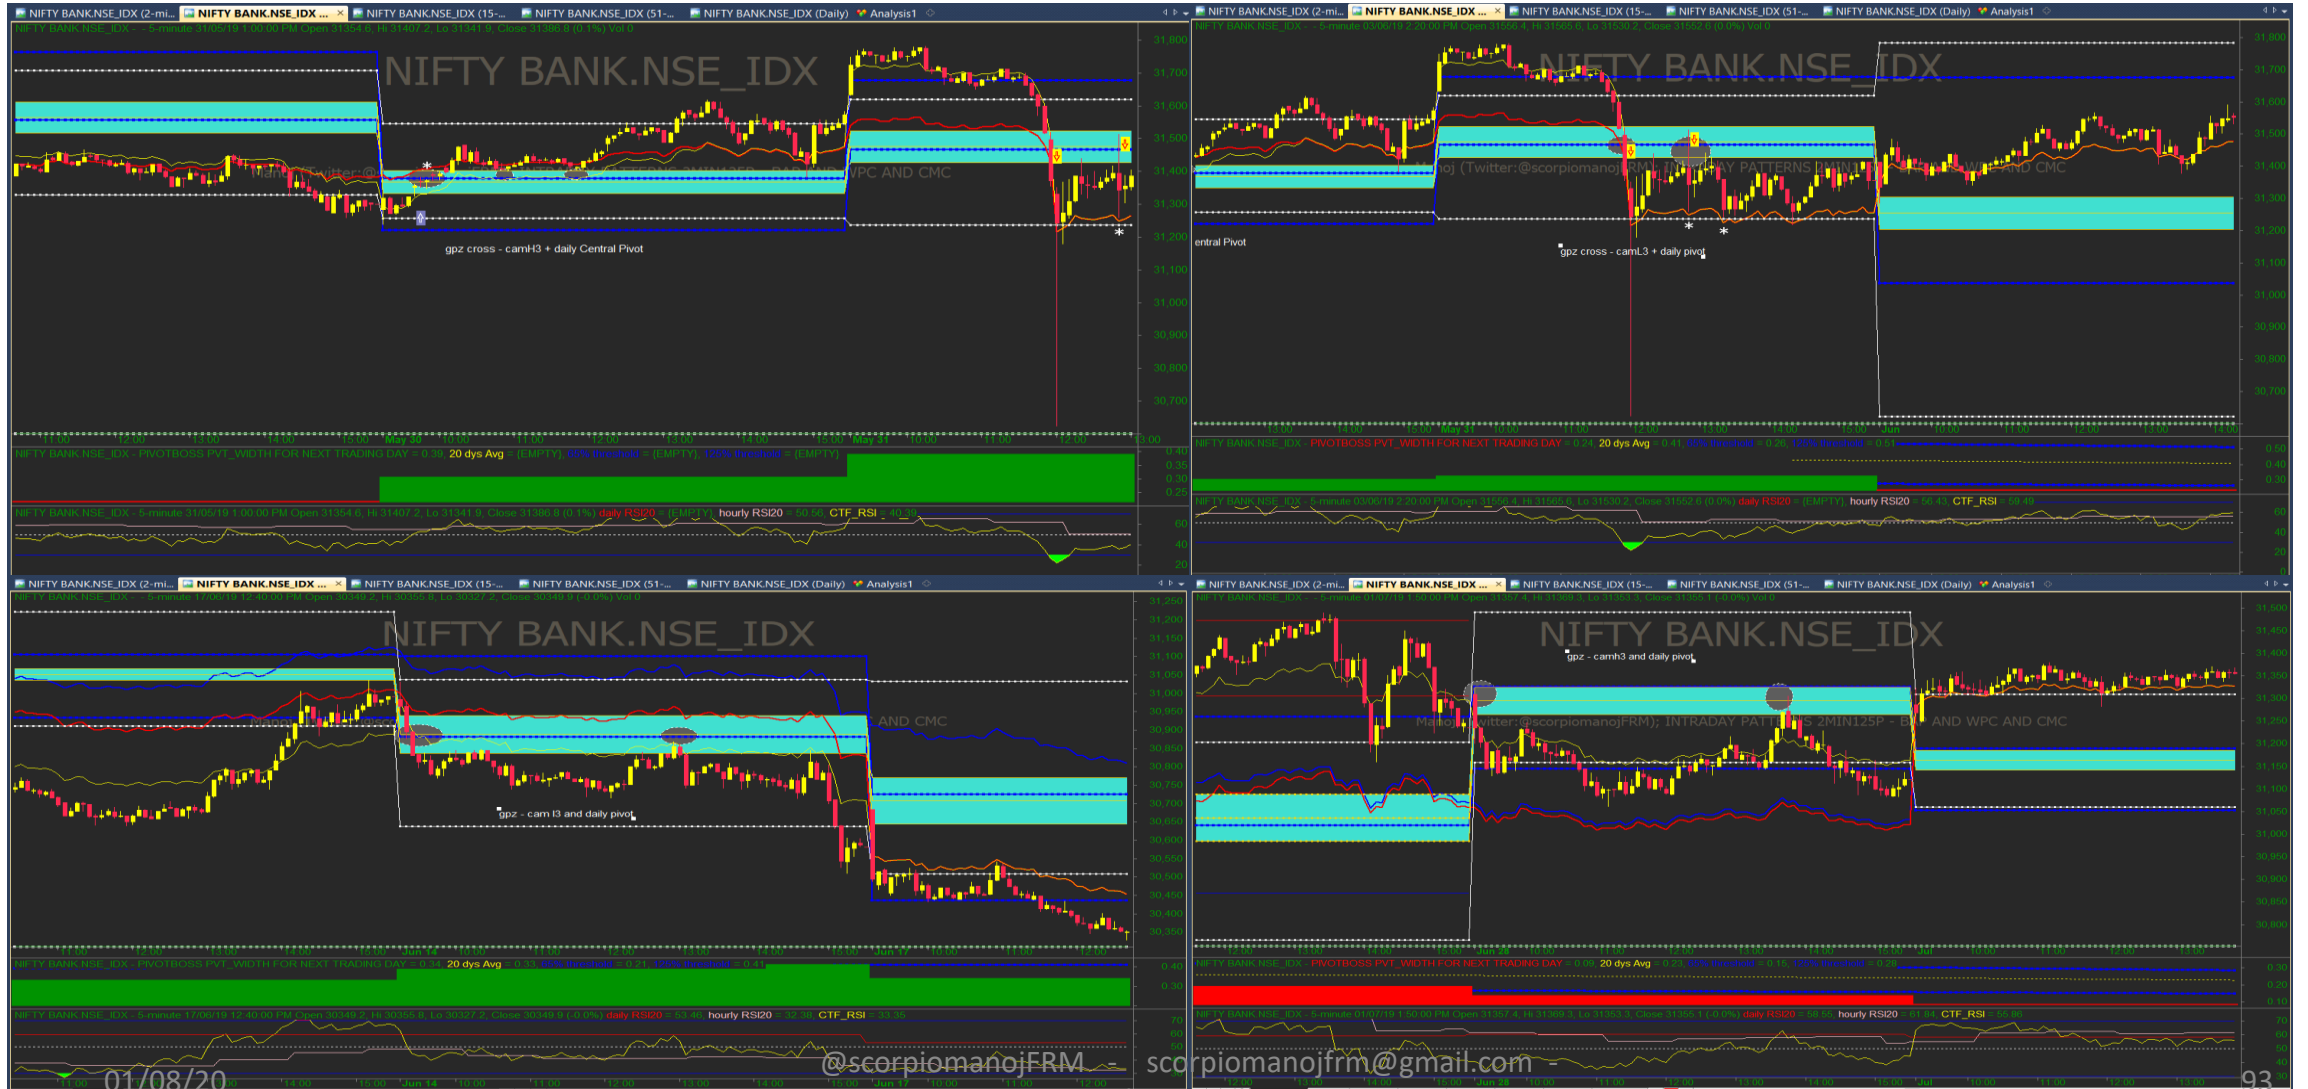

TRADING SETUPS – COMBO BREAKOUT (CONTD...)

TRADING SETUPS – GPZ

- Golden Pivot Zone bearish reversal – When Central Pivot is in confluence with Camarilla R3, it forms a strong resistance zone ; Any reversal at this zone has to be played for short side. Any breach of this zone will have to be played for the long side. GPZ bearish reversal acts as a strong resistance , but once breached acts as a strong support. Target should be nearest key level. Stop should be Central pivot or Cam R3 whichever is farther.
- Golden Pivot Zone bullish reversal - When Central Pivot is in confluence with Camarilla S3, it forms a strong support zone. Any reversal at this zone has to be played for long side. Any breach of this zone will have to be played for the short side. GPZ bullish reversal acts as a strong support, but once breached acts as a strong resistance. Target should be nearest key level. Stop should be Central pivot or Cam S3 whichever is farther.

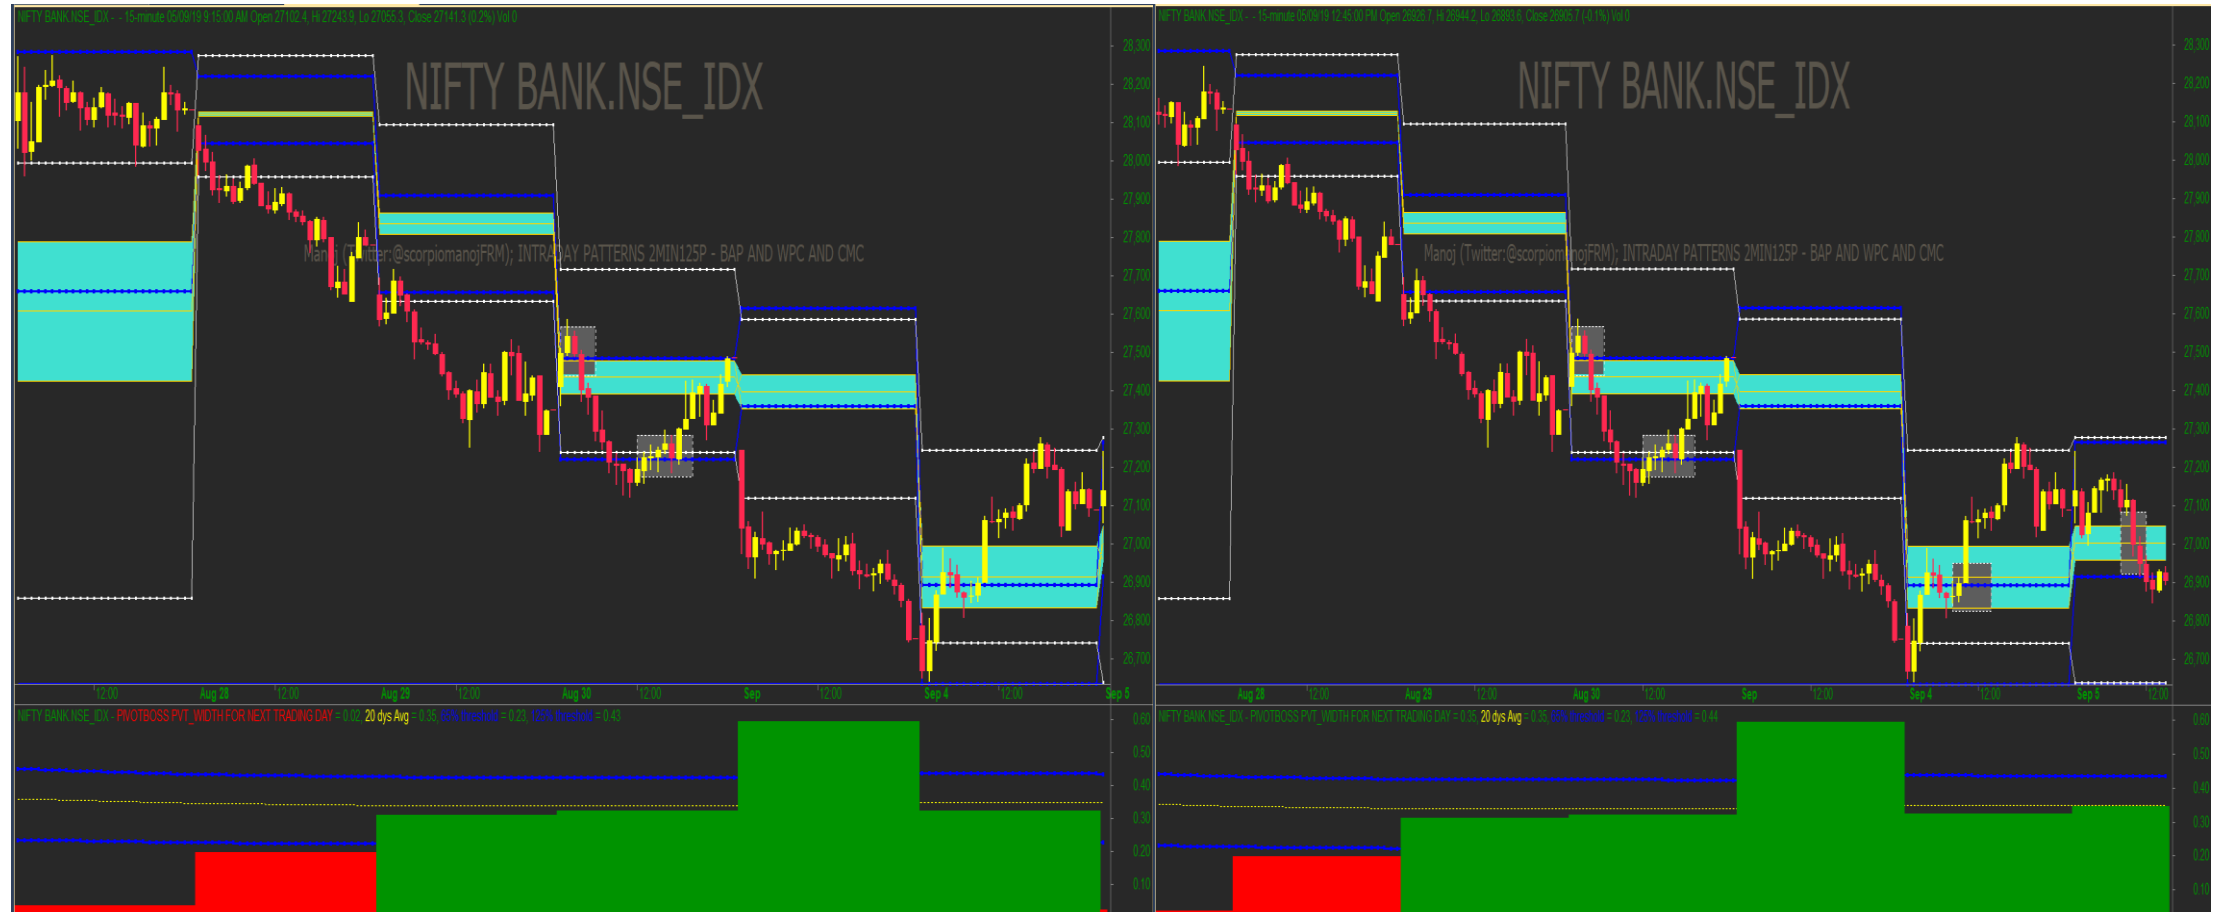

TRADING SETUPS - GPZ

TRADING SETUPS – CAMARILLA REVERSALS

- Pre-requisite – wide Pivot Width
- Buy setup is a reversal price action at Cam S3 / target – Central pivot or Cam R3 ; Stop few ticks above Cam S3. Usually powerful if it combines with Central Pivot or PDH.
- Short setup is a reversal price action at Cam R3 / target – Central pivot or Cam S3; Stop few ticks below Cam R3. Usually powerful if it combines with Central Pivot or PDL.

TRADING SETUPS – CAMARILLA RVSL

TRADING SETUPS – PEMA TRADE (CONTD)

- Pay special attention to 200 period EMAs on 15 min / 5 min / 1 min chart (trading time frame chart).
- Any cross over / under 200 period EMAs usually lead to a big move, particularly if 200 period ema is in confluence of any other key levels like PDH/PDL/Central Pivot / Camarilla R3/S3, etc.
- 20 period EMA can be used for trailing existing positions.
- Pay special attention to higher time frame High and Low levels (Previous week high / previous week low / previous month high / previous month low). These form a strong support or resistance and any break will lead to big moves.

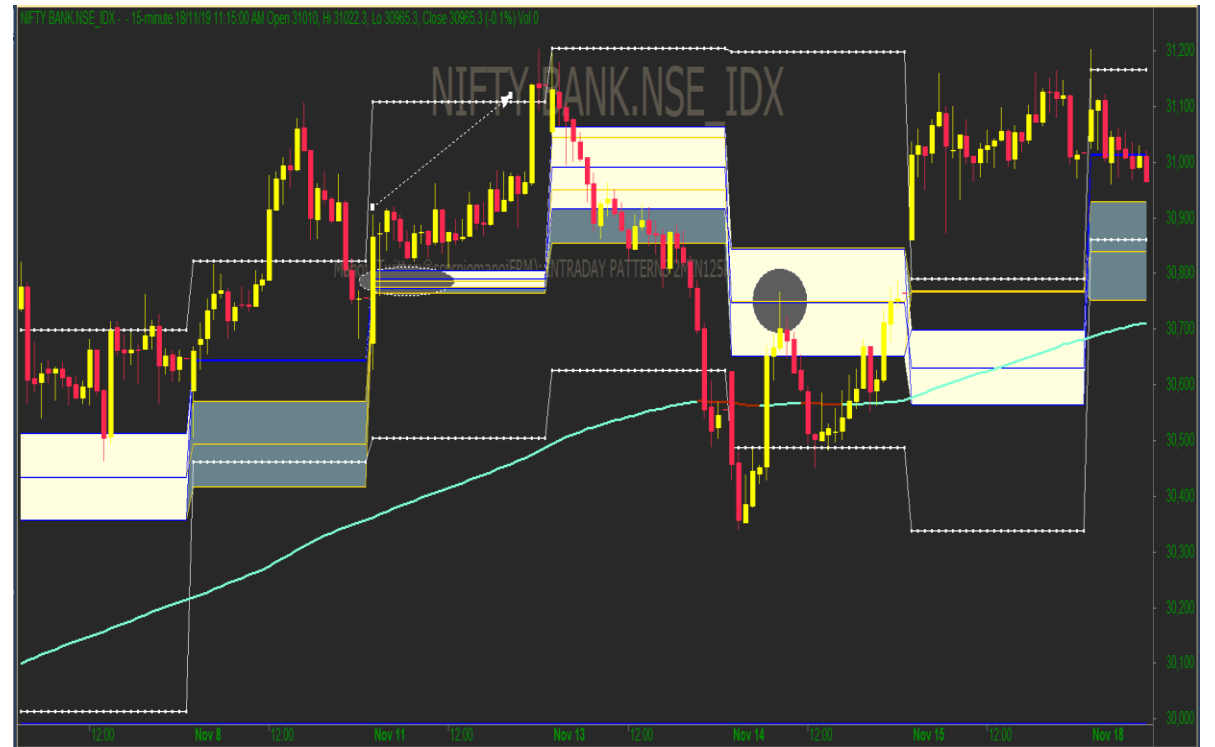

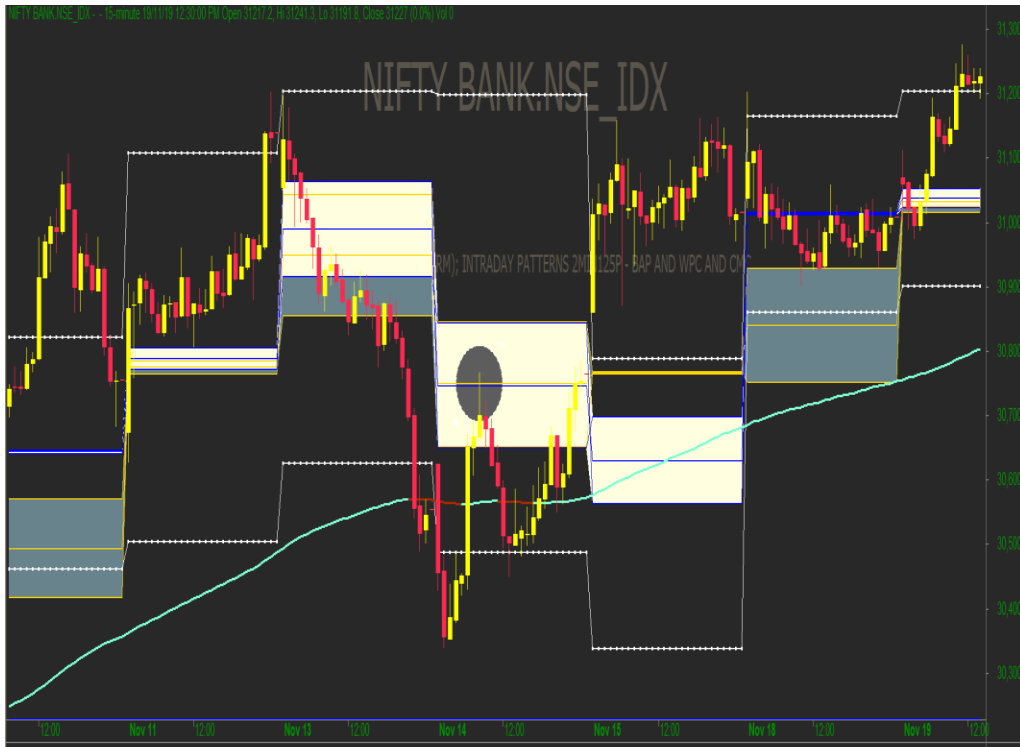

TRADING SETUPS – PEMA (CONTD)

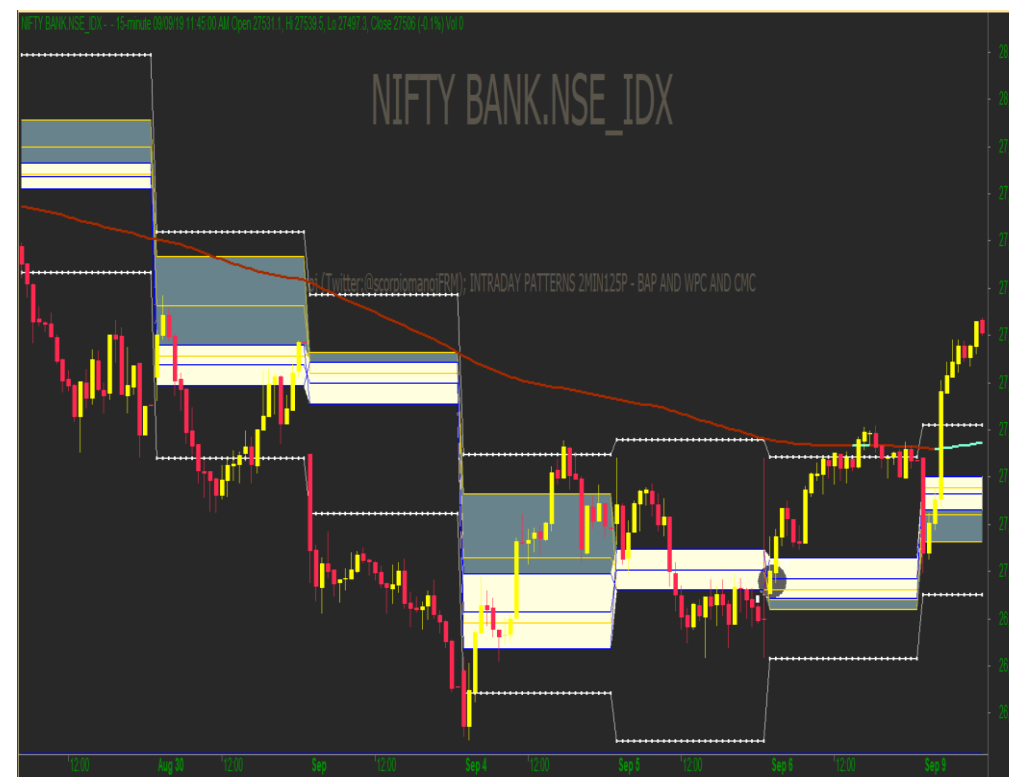

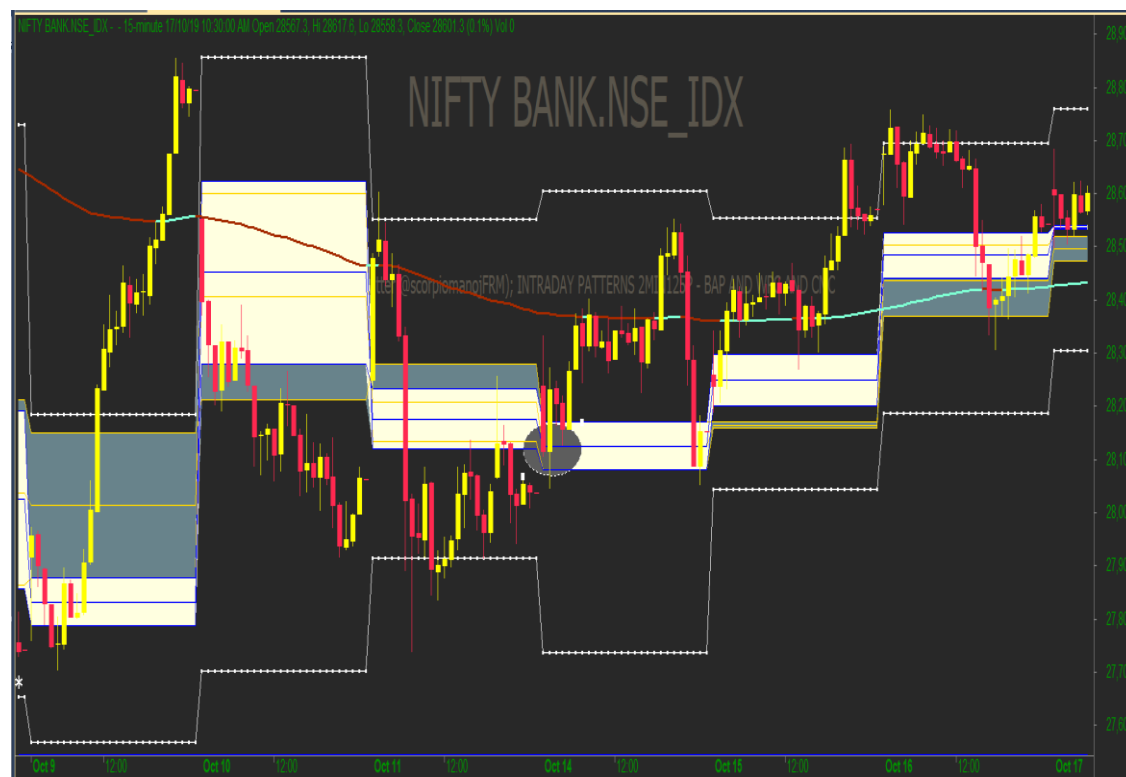

TRADING SETUPS – 1D2D PIVOT TRADE

- Confluence of daily pivot (1day pivot) and 2 day pivot usually acts as a strong support or a strong resistance.
- 2 day pivot / cpr is calculated using high and low of 2 day trading session and the latest close.
- Long position – Any bounce from 1D2D pivot. Targets can be PDH and can trail beyond that.
- Short position – Any resistance of 1D2D pivot. Targets can be PDL and can trail beyond than.
- Aggressive longs – Any crossover of 1D2D confluence usually leads to a big move upside.
- Aggressive shorts – Any crossunder of 1D2D confluence usually leads to a big move downside.

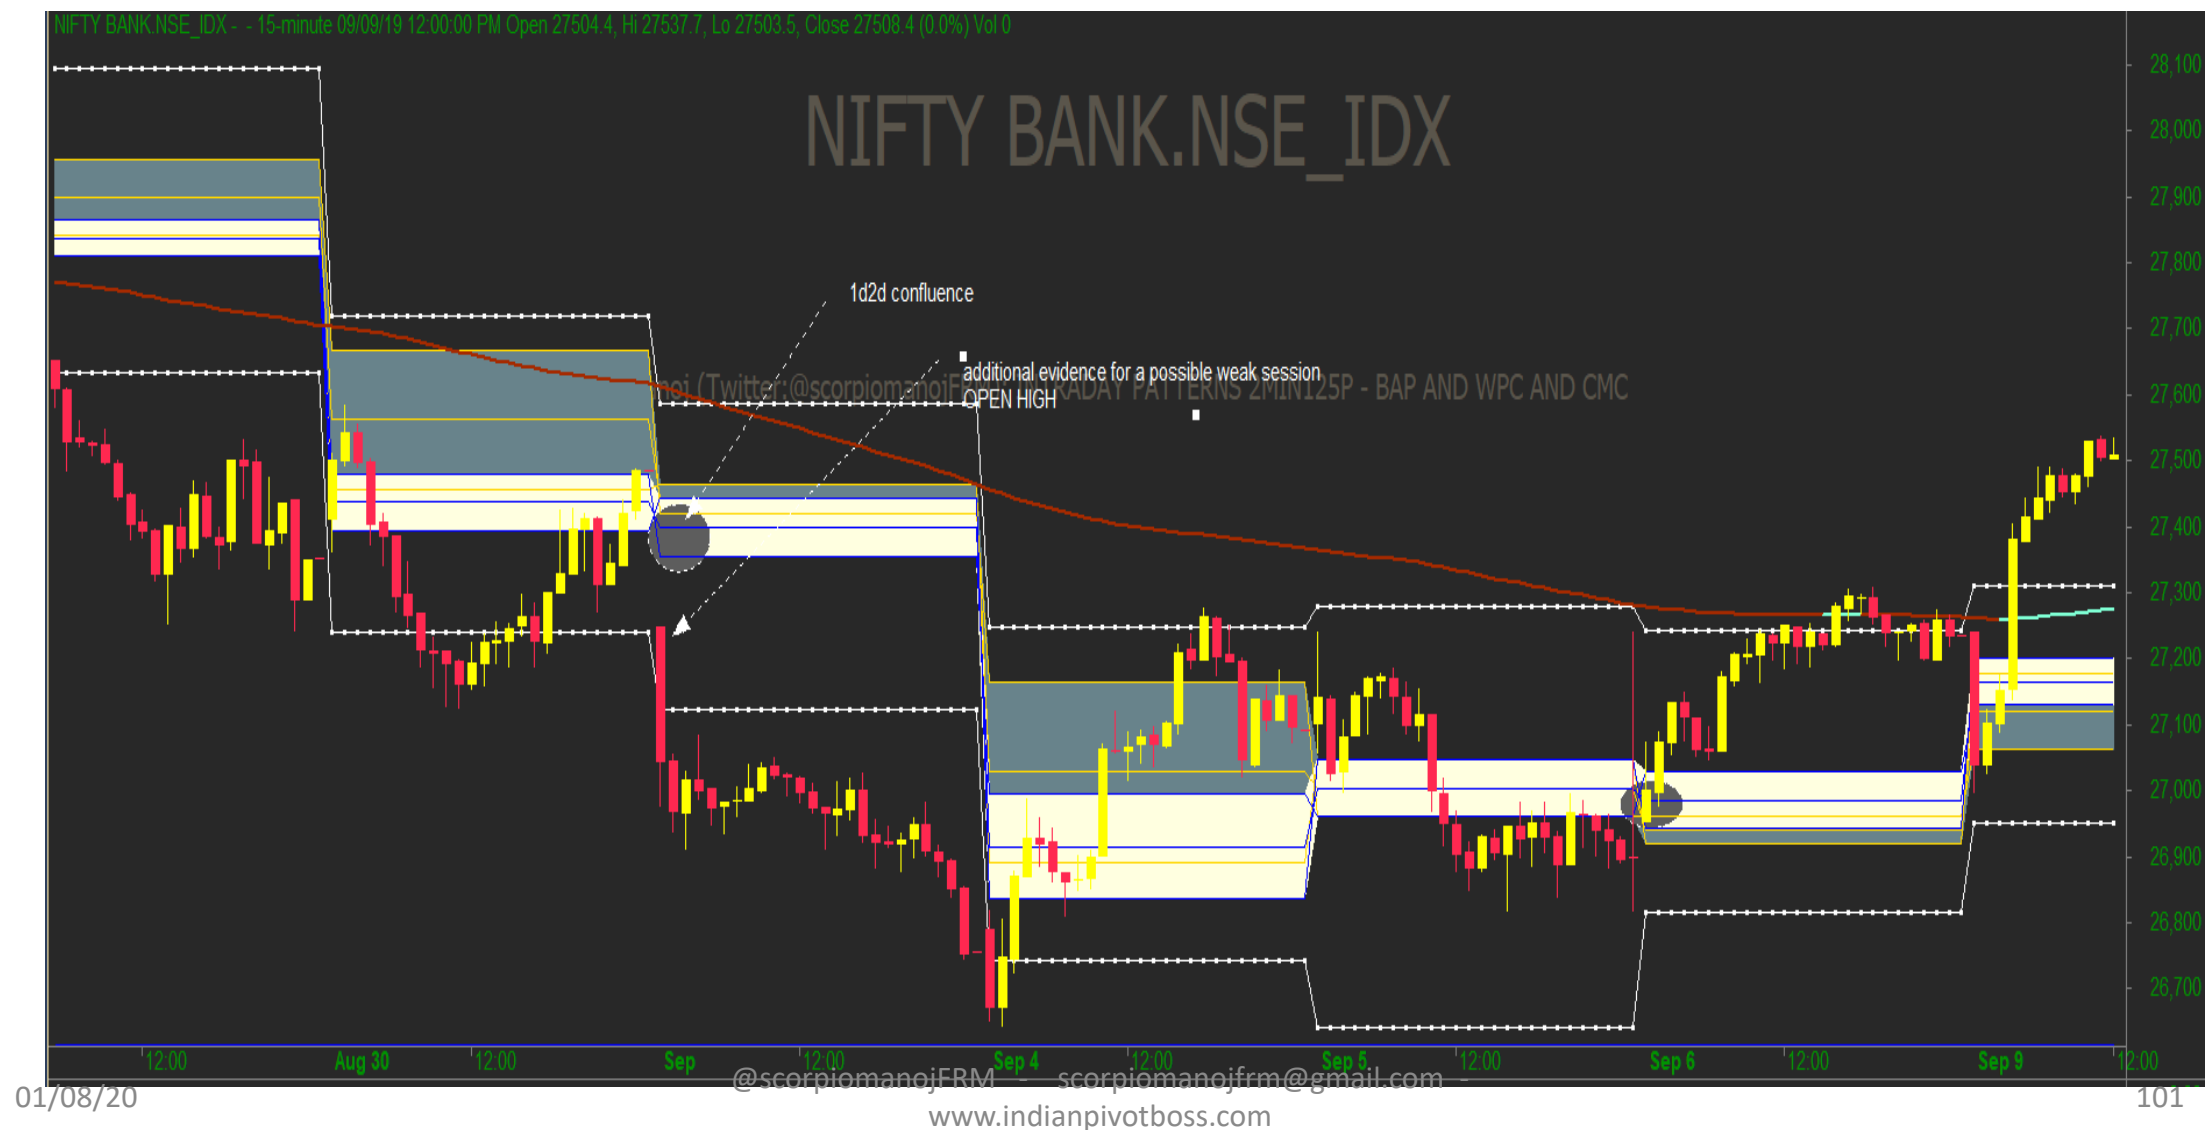

TRADING SETUPS – 1D2D TRADE (CONTD)

TRADING SETUPS – 1D2D TRADE (CONTD)

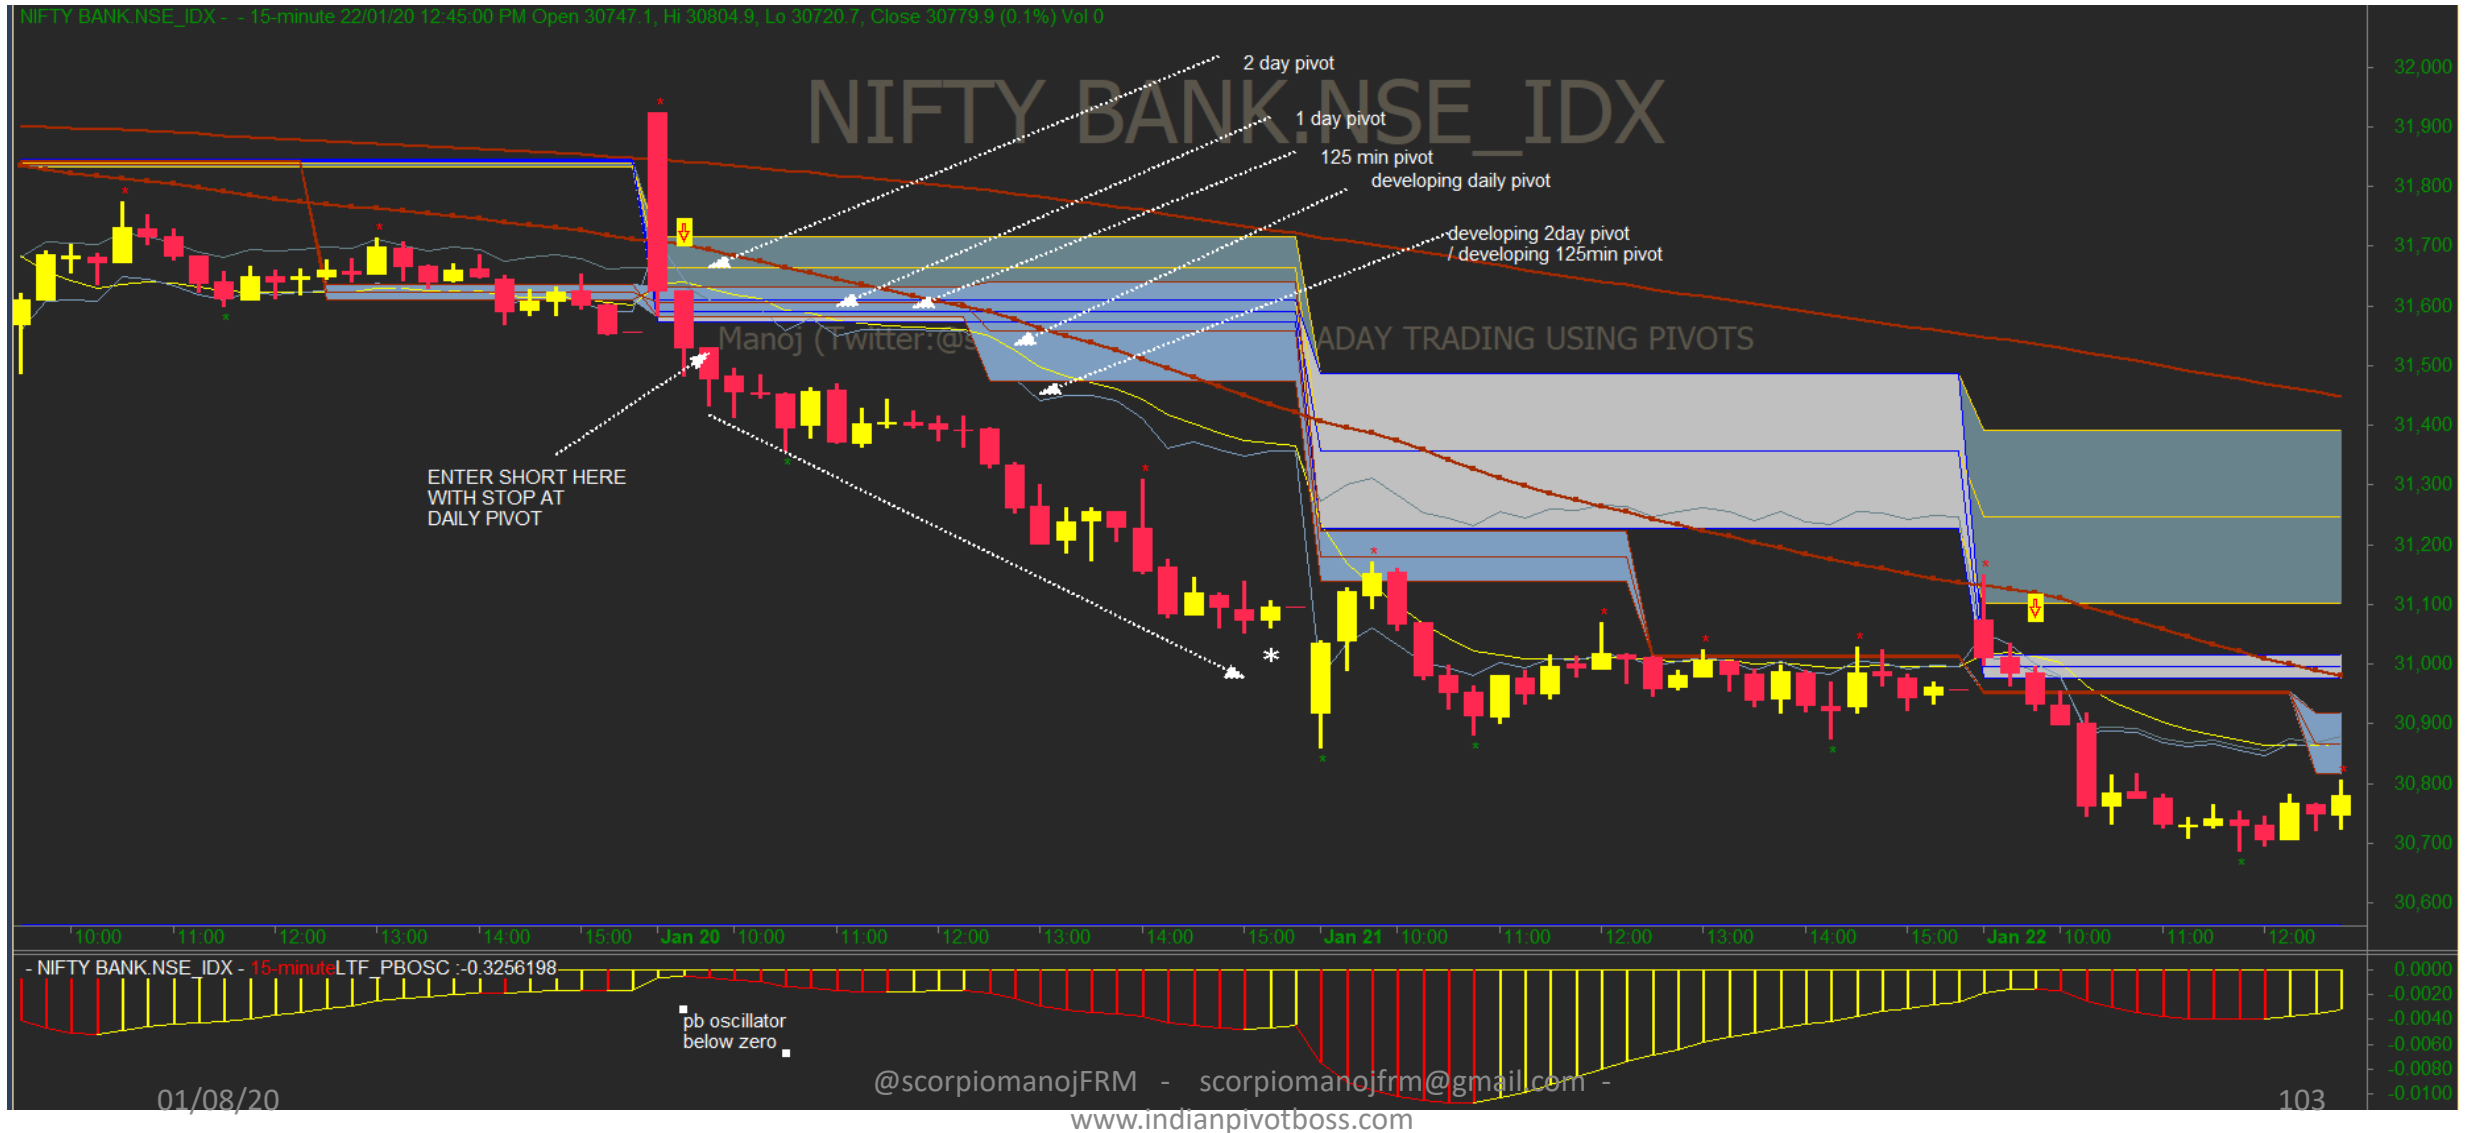

TRADING SETUPS – 1D2D TRADE (CONTD)

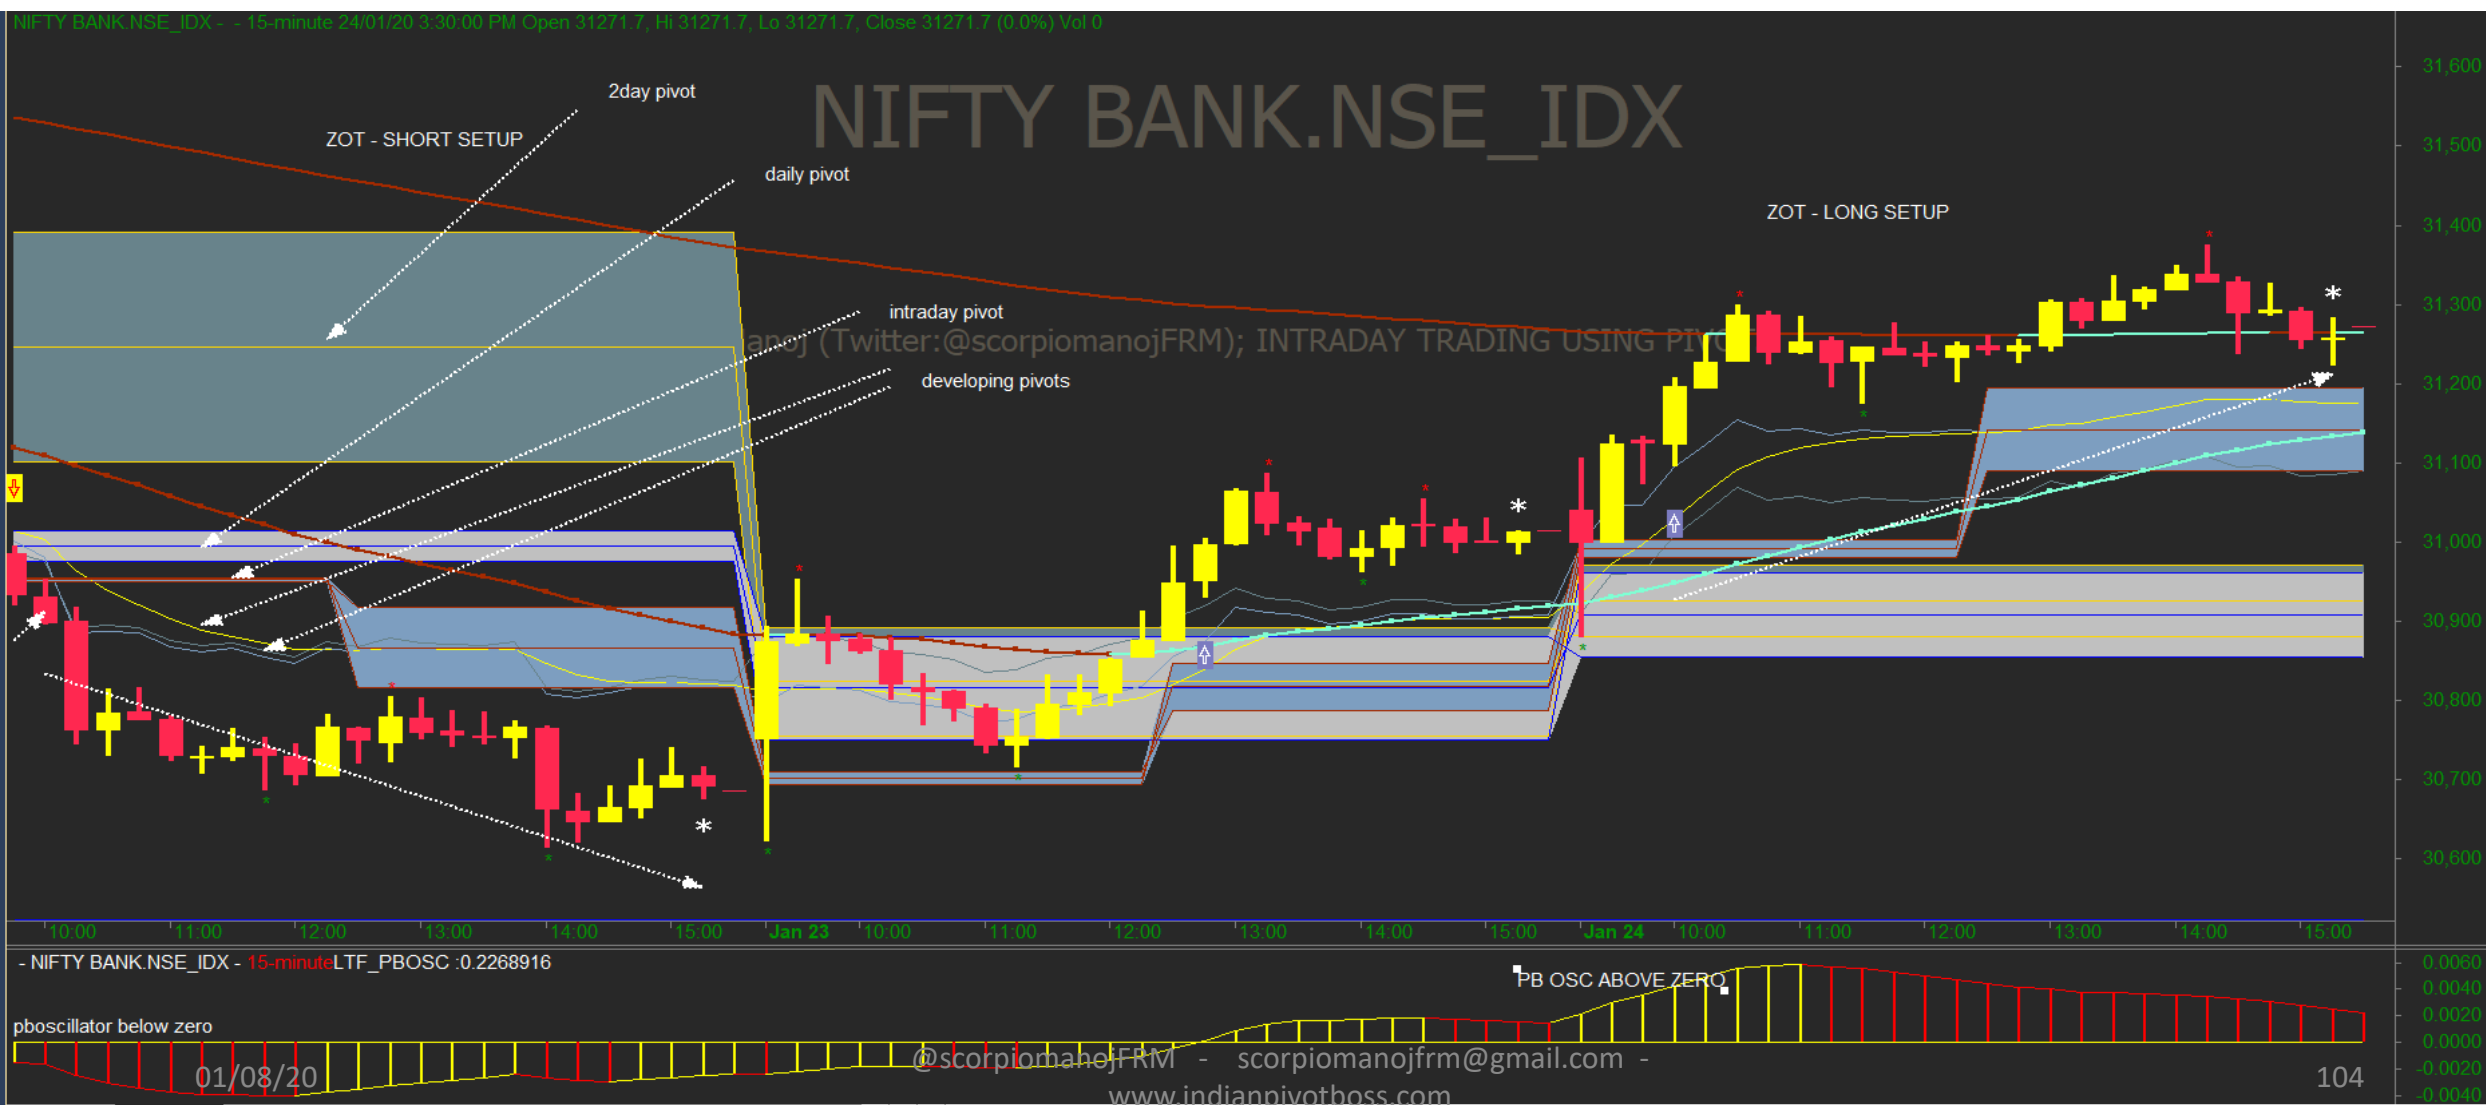

TRADING SETUPS – ZOT (ZERO ONE TWO)

- This strategy ensures that the price bias is similar across intraday pivot structure (Zero) / daily pivot structure (one) / two day pivot structure (two).
- It also ensures that the market is in a trending phase or beginning to trend by taking cue from pivot based oscillator.
- Long position
 - Close above intraday pivot, daily pivot, 2day pivot and developing pivot.
 - Confluence of any two of the first three pivots above.
 - Pivot based oscillator above Zero.
 - OR Price above developing pivots of intraday, developing pivots of daily and developing pivots of 2day.
 - **BEST SETUP – IF PRICE CROSSES ABOVE INTRADAY PIVOT / DAILY PIVOT / TWO DAY PIVOT / AND ALL DEVELOPING PIVOTS AT THE SAME TIME. THIS ESSENTIALLY HAPPENS IF ALL THESE PIVOTS ARE IN A CLOSE UP ZONE WITH INTRADAY PIVOT > 1 DAY PIVOT > 2 DAY PIVOT NEATLY STACKED IN THAT ORDER WITH A CLOSENESS.**
 - Stop should be ideally the daily pivot / 2 day pivot.
- Exit Long position
 - If price falls below developing daily pivot / 20 period EMA / intraday developing pivot - any two. Usually exits will be close to day end as this kind of scenario arises a trending move.
- Short position
 - Similar logic of long position.

TRADING SETUPS – ZOT(CONTD)

TRADING SETUPS – ZOT(CONTD)

TRADING SETUPS

– FBO (FAILED BREAKOUT STRATEGY)

- Failed Breakout Strategy takes into account of two Key Levels namey Previous day High (PDH) and Previous Day Low (PDL).
- Long setup is valid if price crosses above PDL from below ONLY AFTER 9.30 AM giving room for the first 15 min to settle down. Stops are a tad below PDL. Usually exits are suggested at PDH (skipping Central Pivot) with an objective to capture the most moves. Conservatively one can start trailing price the moment it reaches Central Pivot if applicable. Short setup is the exact opposite replica.
- This setup usually results in a good move if it happens as the move would be ideally reflecting either short covering / long unwinding. The concept is a bit similar to SCR / LUR strategy but here the reference is PDH / PDL.

TRADING SETUPS – FBO (CONTD.../-)

XI) PUTTING IT ALL TOGETHER – THE PROCESS

A) LEVEL MARKING :

- 1) Mark key levels (refer key levels slide) in the chart. Look if any GPZ available.(PREV DAY EVENING)

B) Pivot width Analysis :

- 1) Analyse the pivot width to find out if it is narrow or broad as per our definitions.(PREV DAY EVENING)
- 2) If pivot width is narrow, then get ready for BAP, Combo BO, GPZ BO.
- 3) If pivot width is broad, then get ready for Reversal pattern trades like, Pivot reversal, Magnet trade, Camarilla reversal, GPZ reversal, etc.

C) 2day CPR relationship :

- 1) Note down the 2 day pivot relationship (PREV DAY EVENING). Be ready with your view. Next day look for CPR reversal trades / LUR1 or LUR2 / SCR1 or SCR2 .
- 2) Also look for a possibility of pivot + ema setup (pema). Incase you find one, get ready for a trade at that zone which usually acts as a strong S/R.
- 3) Also look for a possibility of PBO median cross (preferably in conjunction with price action / pivot position).
- 4) Look for 1 day cpr – 2 day cpr confluence. (PREV DAY EVENING). Be ready to take trades based on price behavior at this zone.

D) Trading Plan :

- 1) Based on A,B,C develop a trading plan with 3-4 scenarios. It should clearly specify the scenarios of the possible market movement and your actions keeping into consideration of A, B and C.
- 2) In the beginning you might get lost as to how to start. Just jot down whatever best you can. Gradually things will start improving. You have to do this consistently inorder to master markets. It is like entering into a battle field where you don't know the outcome. So instead of trying to predict the outcome, draw various scenarios and actions.

PUTTING IT ALL TOGETHER – THE PROCESS... CONTD..../-

D) TRADING PLAN DEVELOPMENT CONTD... :

- 1) Development of Trading Plan is a very important key responsibility of a successful day trader.
- 2) When you should develop TP – The previous day.
- 3) What should you observe?
 - 1) Pivot Trend – HV / LV / IV any other trend.
 - 2) Pivot width – Narrow / Broad
 - 3) Key levels – PDH/PDL, PWH/PWL, PMH/PML, Weekly / Monthly / Quarterly / Yearly pivots , Daily CPR with level 1 and 2 support and Resistance levels, Camarilla daily level 3. Those reasonably close to price only need to be considered.
 - 4) Draw 3-4 possible scenarios and your actions in terms of these scenarios.
 - 5) Irrespective of any trading setup you tend to follow, trading plan is compulsory. You have to analyse if the trading setup fits into the trading plan.
 - 6) A TRADING SETUP WILL FORCE YOU TO DEPEND ON A PARTICULAR SCENARIO. A TRADING PLAN WILL HELP YOU TO BE VERSATILE AS PER MARKET SCENARIOS.
 - 7) TRUST ME....THIS IS ONE OF THE KEY SECRETS TO MASTER THE MARKETS.
 - 8) **DO THIS CONSISTENTLY AND OBSERVE AFTER 1 MONTH; YOU WILL SEE A PHENOMENAL CHANGE IN YOUR TRADING STYLE. STILL IF YOU DON'T OBSERVE ANY CHANGE, COME BACK TO ME. LET US IDENTIFY THE ISSUES.**

XII) POSITION SIZE (VERY VERY IMPORTANT)

2% Rule :

- a) Calculate the maximum amount you are willing to lose per trade (not more than 2% of your account). This is your Risk Appetite.
- b) Calculate the absolute difference between Entry price and Stop price. This is your trade risk.
- c) The number of shares you are allowed to trade (Position size) is,

$$\frac{\text{Risk Appetite}}{\text{Trade Risk}}$$

6% Rule :

- a) If the losses exceed 6% of your capital in a month, you should stop trading for that month.

XIII)TRADING BEST PRACTICES

- 1) IF YOU ARE IN THE BEGINNING STAGE OF TRADING (0 TO 5 YEARS EXPERIENCE), DO NOT TRADE OPTIONS. TRADE ONLY INDEX FUTURES WITH LOTS AS PER RISK APPETITE DETERMINED BY THE FORMULA IN THE PREVIOUS SLIDE. INTRADAY OPTION TRADING IS VERY DIFFICULT TO MANAGE RISK FOR THE BEGINNERS. IT IS A SURE SHOT WAY FOR BLOWING YOUR CAPITAL. INTRADAY OPTION TRADING IS ONLY FOR EXPERIENCED TRADERS.
- 2) Never convert an MIS trade intended for Intraday to NRML trade. Vice versa is fine.
- 3) Never see the PnL when you are in a trade. Only see the chart and focus on levels of stops or trailing levels or profit taking levels.
- 4) Always move your stops upwards and NEVER downwards.
- 5) Before taking a trade right down the reason in your trade log very briefly. If you are not able to reason out then it is a random trade and the chances of success is very low.
- 6) Do not count the chickens before it hatches. Never get overwhelmed by seeing your MTM. The MTM is yours only when you book it. Anything can happen any moment. Hence maintain a constant psychology during your trading times.
- 7) Trade only when you have all the necessary infrastructure. Particularly, do not trade from mobile when you are travelling.
- 8) Market is always there. So never think that you missed out a trading day.

XIV) TOOLS

- Trading View
 - My proprietary pivot based indicators available free of cost.
 - Some important trading view indicators. Go to my profile in trading view (scorpiomanoj). Click 'SCRIPTS' tab. In the indicators / strategy section, click the third small button on the right bottom 'Add to Favorites'. It will be added automatically to your favorites.
 - MUPS strategy for Bank Nifty (JP_MUPS)
<https://www.tradingview.com/script/dTOxhfCO-IndianPivotBossJP-MUPS/>
 - MUPS strategy for Nifty (JP_MUPS_NIFTY)
<https://www.tradingview.com/script/q9PFckF2-IndianPivotBossJP-MUPS-NIFTY/>
 - All other scripts are found below:
 - <https://www.tradingview.com/u/scorpiomanoj/#published-scripts>
 - Includes daily / weekly / monthly pivots with supports and resistances.
 - Also includes pivot width with narrow and broader thresholds.
 - Usage of Trading View requires subscription.
- Amibroker (requires AFL)
 - Amibroker trial version available for download at amibroker site. Free of cost.
 - Paid version has the advantage of storing databases.
 - Requires datafeed from external licensed vendors which is chargeable separately in the range of Rs 500-Rs 3000 per month.
 - AFL required (will provide AFL support).
 - Strongly suggested as it is very versatile with lots of scanning / backtesting features.

AMIBROKER AFL SETUP

- Three sets of AFL will be provided:
- PIVOT AFL (THE MOST COMPREHENSIVE PIVOT BASED AFL)
 - Plotting daily chart in 5 min or 15 min chart.
 - Pivot based EMAs and normal EMAs.
 - VWAP (all timeframes)
 - VWAP bands (all timeframes)
 - Pivots(125min, daily, 2day, weekly, monthly, yearly)
 - Next session pivots (125min, daily, 2day, weekly, monthly)
 - Running pivots (125min, daily, 2day, weekly, monthly)
 - Camarilla pivots (daily)
 - Next session Camarilla pivots (daily)
 - Previous session H/L (125min, day, week, month)
 - Different trading setup strategies (only indicative, don't follow blindly)
 - Scanning / exploration feature on 1d2d based trend analysis (useful for selecting stocks)
 - AND MANY MORE VERY USEFUL FEATURES.....
- PIVOT WIDTH AFL
 - Can choose to assess the width of 1day, 2day and Camarilla pivots and Developing Pivot Width (TREND DETERMINANT)
 - Has color differentiation to identify narrow and wider pivots as per definitions discussed in this presentation.
- PBOSCILLATOR AFL
 - Plots PBO / Pivot RSI / Pivot Shift Indicator .
- Buy Sell Volume AFL
 - Segregates Volume into Buy and Sell volume based on proprietary concept.
- **IMPORTANT**
 - **FEW DATA PROVIDERS CHART CANDLE TIME ENDS WITH `9` ; THIS IS DATA PROVIDER ISSUE. YOU NEED TO CUSTOMSE THE CODE IF YOU HAVE THIS ISSUE.**
 - **OPEN THE CODE AND GO TO THE LINES WHERE TIMENUM() IS MENTIONED AND CHANGE IT TO ONE SECOND LESS FOR ALL EXCEPT 091500.**
 - **FOR EG, REPLACE 151500 TO 151459. IN CASE OF 091500 REPLACE TO 092959**

ASSUMPTIONS USED IN BACKTESTING

- The backtest report provided are out of sample results on banknifty (2019-2020).
- In-sample results (2013-2019) are also available; if you require them are ready to provide based on requirement.
- No compounding assumed inorder to be conservative.
- Maximum quantity (not lots) assumed is 1000.
- Stop of 2% assumed per trade.
- Trades taken at the close of the candle.
- Brokerage and other charges are taken at Rs 2000 per trade conservatively.
- A beginning capital of Rs 50 lacs assumed.
- You can change all these settings in Amibroker if you want to replicate the backtests.

XV) FINAL THOUGHT

- Have provided all the concepts and tools of pivots and its practical usage in intraday trading.
- Remember this is not a Holy Grail. This only provides a high probability trading setup.
- Suggestion is to UNDERSTAND THE BROADER PERSPECTIVE OF THE MARKET BY ANALYSING THE MARKETS FROM A PIVOT PERSPECTIVE AND then pick 2-3 setups and trade it with proper risk management. Repeat the process. WHILE TRADING UNDERSTAND THE BROADER CONTEXT OF THE MARKET.
- Do not forget risk management as Anything Can Happen. Only way to safeguard is adopting proper Risk Management.
- If you have consciously followed the concepts and consistently developed a trading plan on a daily basis by doing your homework and diligently applied the same in your trading with proper Risk Management.....and still you aren't finding success in trading, DO LET ME KNOW. WE WILL IDENTIFY THE ISSUES YOU ARE FACING.....(WITHOUT ANY CHARGES).
- Wish you Good Luck in your Trading endeavors.
