Identify Sectors in Ideal Market Regime

Using the SQN (System Quality Number) indicator on Tradingview (free) you can quickly scan all 11 sectors to identify which sector is trading in the Bull Quiet Market Regime (in Green)

Annotate Chart

Annotate your chart so you can quickly identify changes, it also is important to help you identify how these change from one regime to the other over time

Identify Sectors Ready For Us!

Quickly we can identify which sectors are in our sweet spot,
and ignore the ones that aren't

XLU, XLU, XLB, XLP, XLV, XLF, XLRE

The Bull Volatile sectors seemed to have cooled off so we'll
add them to our list to investigate

XLK, XLY, XLY

Clearly a Solid Bull Market

If nothing else, this exercise shows you that during the time of this analysis, we were clearly in a broad bull market where 10/11 Sectors were in Bull Quiet or Bull Volatile with only 1 sector not

Bonus Chart

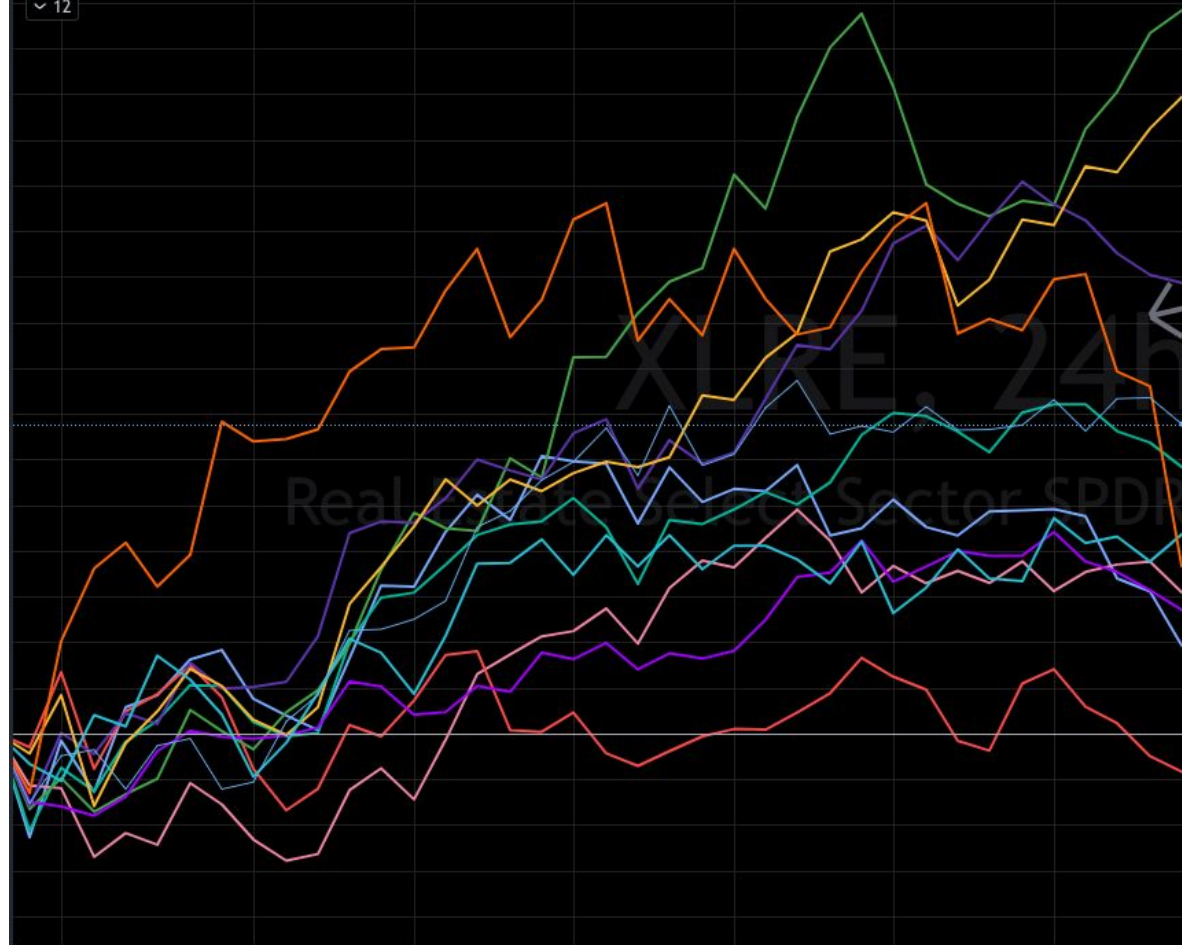

Another chart I like to keep available is a line chart with all 11 S&P 500 Sectors to compare each sector against each other

Often times you'll see 1 sector drip while another sector starts rising as money rotates around the market

It'll also show you when something big has hit the market, and it affects everything

48.21 10.56 58.77

~ 12

Energy clearly dropping hard

	USD
	17.00%
XLY	+15.82%
	15.00%
XLK	+13.93%
	13.00%
	12.00%
	11.00%
XLB	+9.87%
	9.00%
	8.00%
XLRE	+6.78%
	7.00%
XLI	+5.84%
	5.00%
XLU	+4.36%
	4.00%
XLE	+3.67%
XLV	+3.09%
XLP	+2.71%
XLF	+1.93%
	1.00%
	0.00%
XLC	-0.83%
	-2.00%
	-3.00%
	-4.00%

We can clearly see that the \$XLE sector indeed dropped quickly this week

Up Next

Now that we have our sectors identified we'll find the individual stocks within the sectors that we'll be looking at
