

Types of Waves

CORRECTIVE WAVE - Always moves in the direction opposite to that of one larger trend.

- Subdivides into 3 waves or a combination of 3 waves except for triangles.
- It has basically 3 variants and a combination of these 3 variants gives rise to a 4th variant.

Corrective Waves

```
graph TD; A[Corrective Waves] --> B[1. Zig Zag]; A --> C[2. Flat]; A --> D[3. Triangle]; A --> E[4. Complex];
```

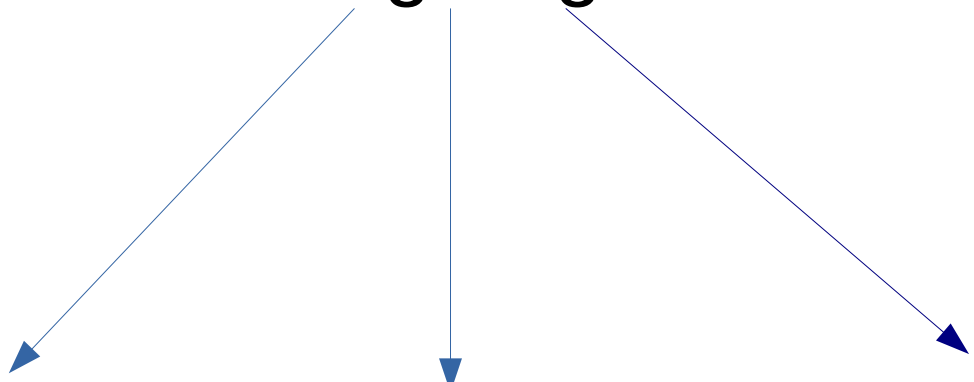

1. Zig Zag

2. Flat

3. Triangle

4. Complex

Zig Zag

1. Single Zig Zag

2. Double Zig Zag

3. Triple Zig Zag

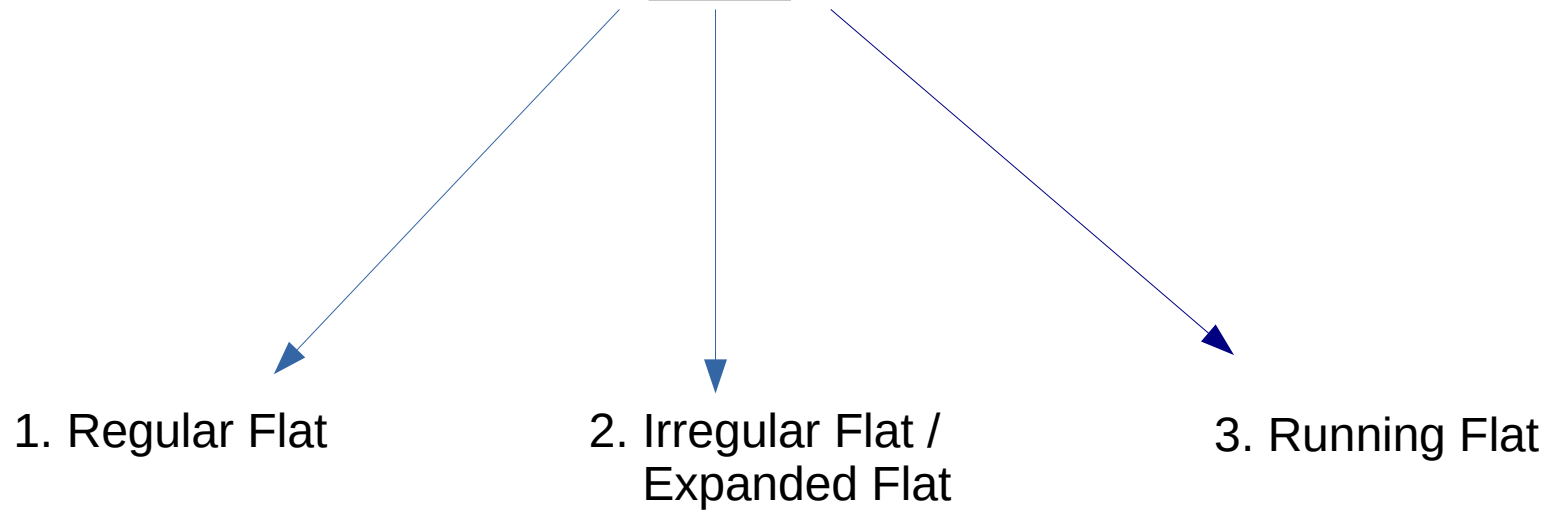

Double Zig Zag has an intervening Wave “X” that connects the 1st Zig Zag Pattern with the 2nd Zig Zag pattern.

Similarly **Triple Zig Zag** has 2 intervening Wave “X” first connects 1st Zig Zag pattern with the 2nd Zig Zag pattern while second Wave “X” connects 2nd Zig Zag pattern to the 3rd Zig Zag pattern.

Zig Zag- It is a 3 Wave pattern.

- **The internal subwaves are divided as 5-3-5 and labelled as A-B-C.**
- When 2 Zig Zags occur together then it is termed as Double Zig Zag, similarly 3 Zig Zags as triple Zig Zag.
- In case of Double and Triple Zig Zag we have an intervening movement which is termed as Wave “X”.
- **Zig Zags are most commonly seen in the Wave 2 position in an impulse.**

Flat

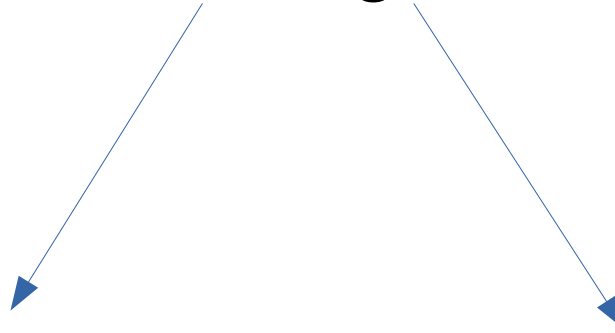

Double Flat – Just like Double Zig Zag two flats can also occur together and are termed as double flat and will have an intervening Wave “X” that connects 1st Flat with the 2nd Flat.

Similarly **Triple Flat** will have two intervening Wave “X” first that connects 1st Flat with the 2nd Flat and the second that connects 2nd Flat with the 3rd.

Flat - It is a 3 Wave pattern.

- The internal subwaves are divided as 3-3-5.
- They most frequently occur in 4th Wave of the Impulse.
- **Regular Flat** – Wave “B” terminates near the start of Wave “A” and Wave “C” terminates slightly beyond the end of Wave “A”.
- **Irregular Flat** – Wave “B” terminates below the starting point of Wave “A” and Wave “C” terminates well beyond the ending point of Wave “A”.
- **Running Flat** – Wave “B” terminates beyond the starting point of Wave “A” but Wave “C” terminates before the ending point of Wave “A”. It is a rare compared to the other two types.

Triangles

1. Contracting
Or Converging

2. Expanding
Or Diverging

Triangle - Consists of 5 Waves that overlap each other.

- Each Wave divides internally in 3 subwaves and the pattern is of 3-3-3-3-3.
- It is labelled as A-B-C-D-E.
- Most frequent places of occurrence -
 - 4th Wave of Impulse
 - or
 - “B” Wave of A-B-C
 - or
 - Last “X” Wave in Double or Triple Zig Zag or Combination
- Expanding Triangles appear less frequently compared to Contracting Triangles.

Complex - A complex correction is nothing but a combination of 2 or more simple corrective patterns.

- Hence Double Zig Zag, Triple Zig Zag and Double Flat and Triple Flat all are complex corrections.

- Also sometimes there will be combinations like -

Flat + Triangle

or

Zig Zag + Flat + Triangle

or any other combination of the 3 basic forms i.e. Zig Zag, Flat and Triangle., all such combinations are termed as complex corrections and Elliott referred to them as **Double Three** (for combination of 2 patterns) or a **Triple Three** (for combination of 3 patterns).
