Classification of Derivatives trading

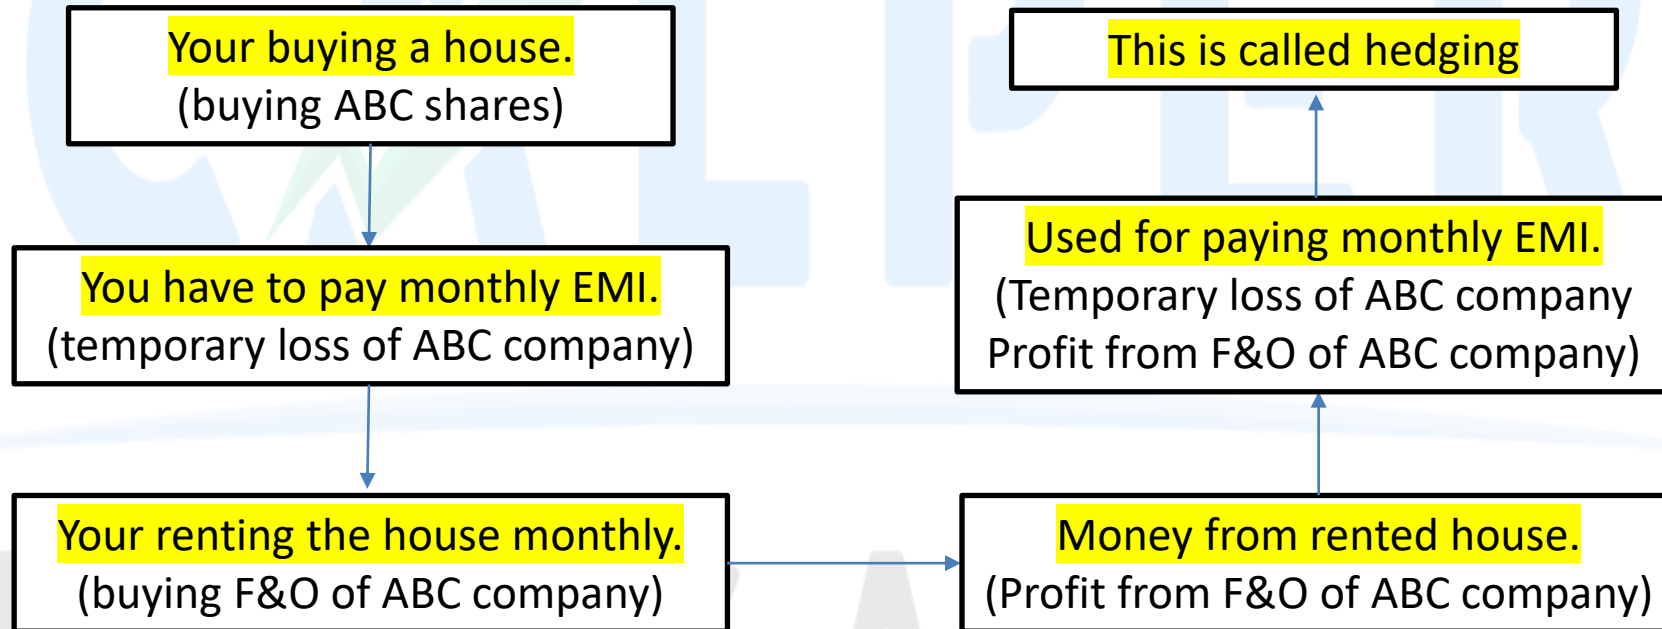

Why Derivatives trading?

What is Hedging?

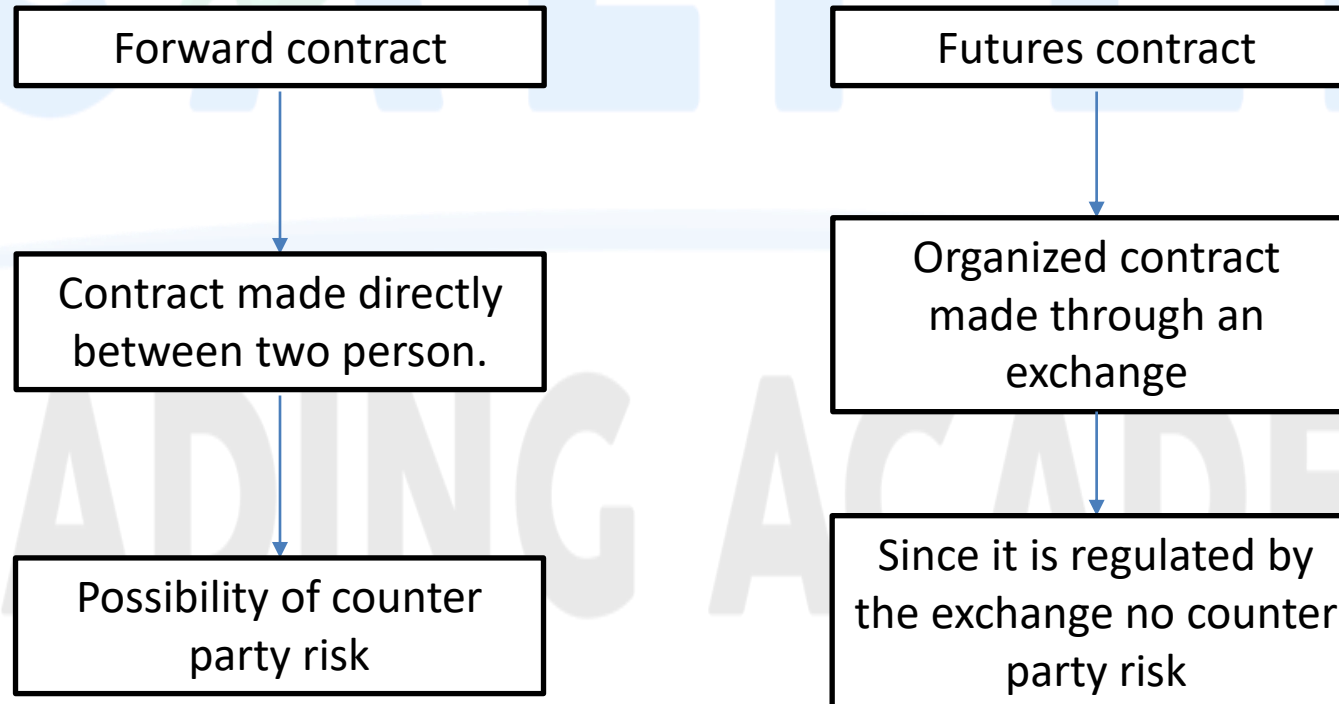

Simple example for hedging

Futures trading

- Futures contracts are introduced similar to forward contracts.
- Futures contracts have pre-defined quantity of shares called market lot.
- Future is a contract (agreement) so it have expiry on last Thursday of every month.
- If future price is lesser than spot price we call it as discount.
- If future price is greater than spot price we call it as premium.
- On the day of expiry both future and spot price becomes equal.

Types of participants

Three types of market participants in derivatives market:

Hedgers:

Corporations, investing institutions and banks all use derivative products to hedge.

Speculators/Traders:

They try to predict the future movements in prices of underlying assets and based on the view, take positions in derivative contracts.

Arbitrageurs:

Arbitrage originates when a trader purchases an asset cheaply in one location and simultaneously arranges to sell it at a higher price in another location.

Types of contracts

Futures and Options have three month contracts:

- Near month contract (Current month – February)
- Next month contract (March)
- Far month contract (April)

Options Basics - Calls, Puts, and their Outlooks

Buying a Call (Long) = **Bullish**

You think the stock will be worth more later, so you want to lock in today's price to buy later at a profit.

Selling a Call (Short) = **Bearish**

You think the stock will be worth less later, so you want to lock in today's price to sell later at a profit.

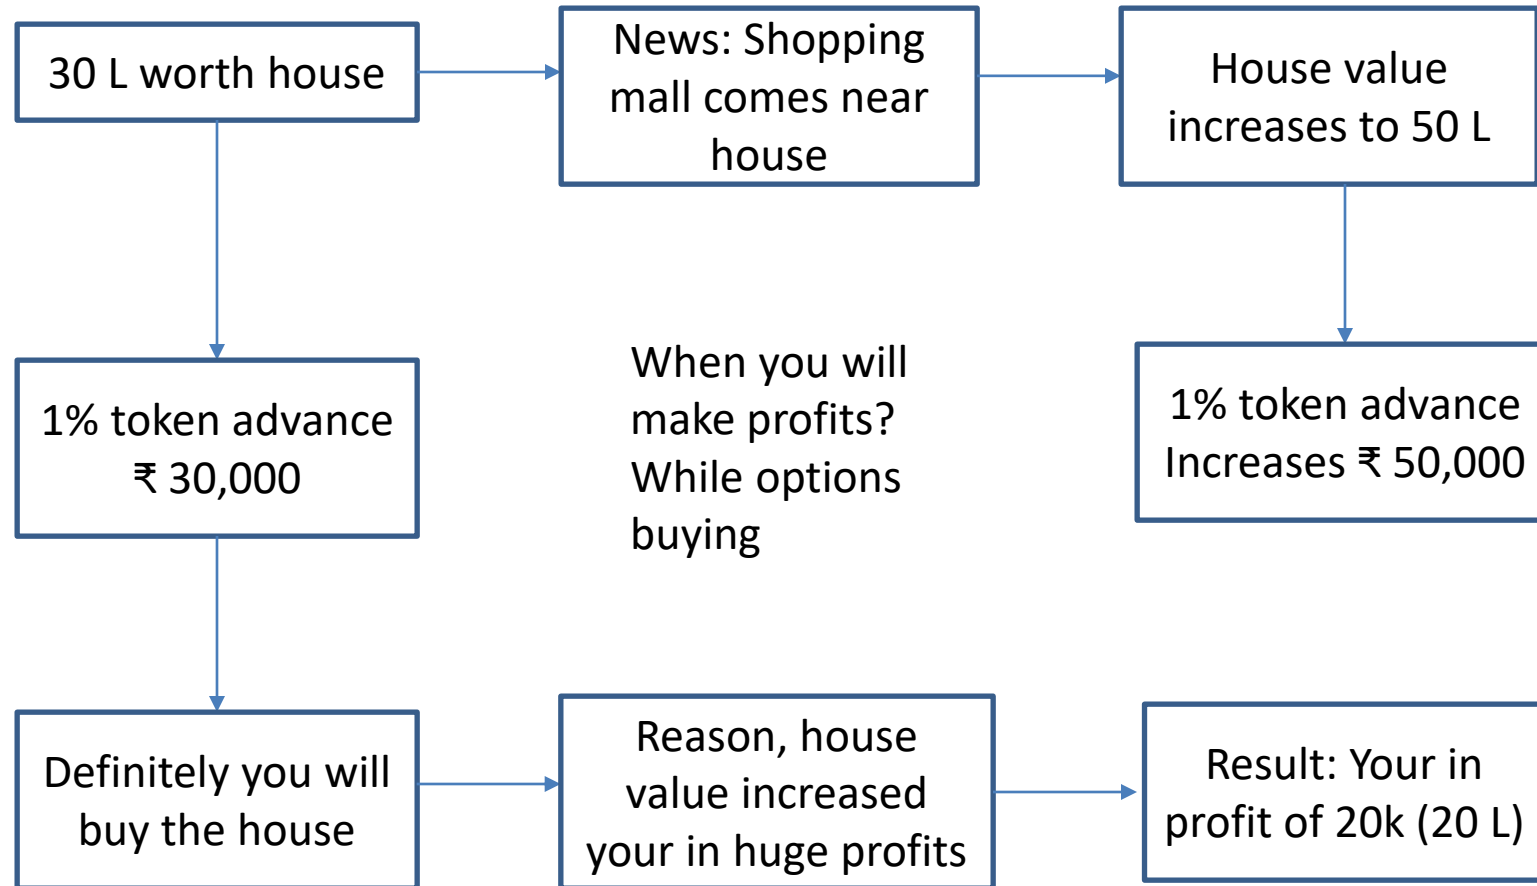

Buying a Put (Short) = **Bearish**

You think the stock will be worth less later, so you want to lock in today's price to sell later at a profit.

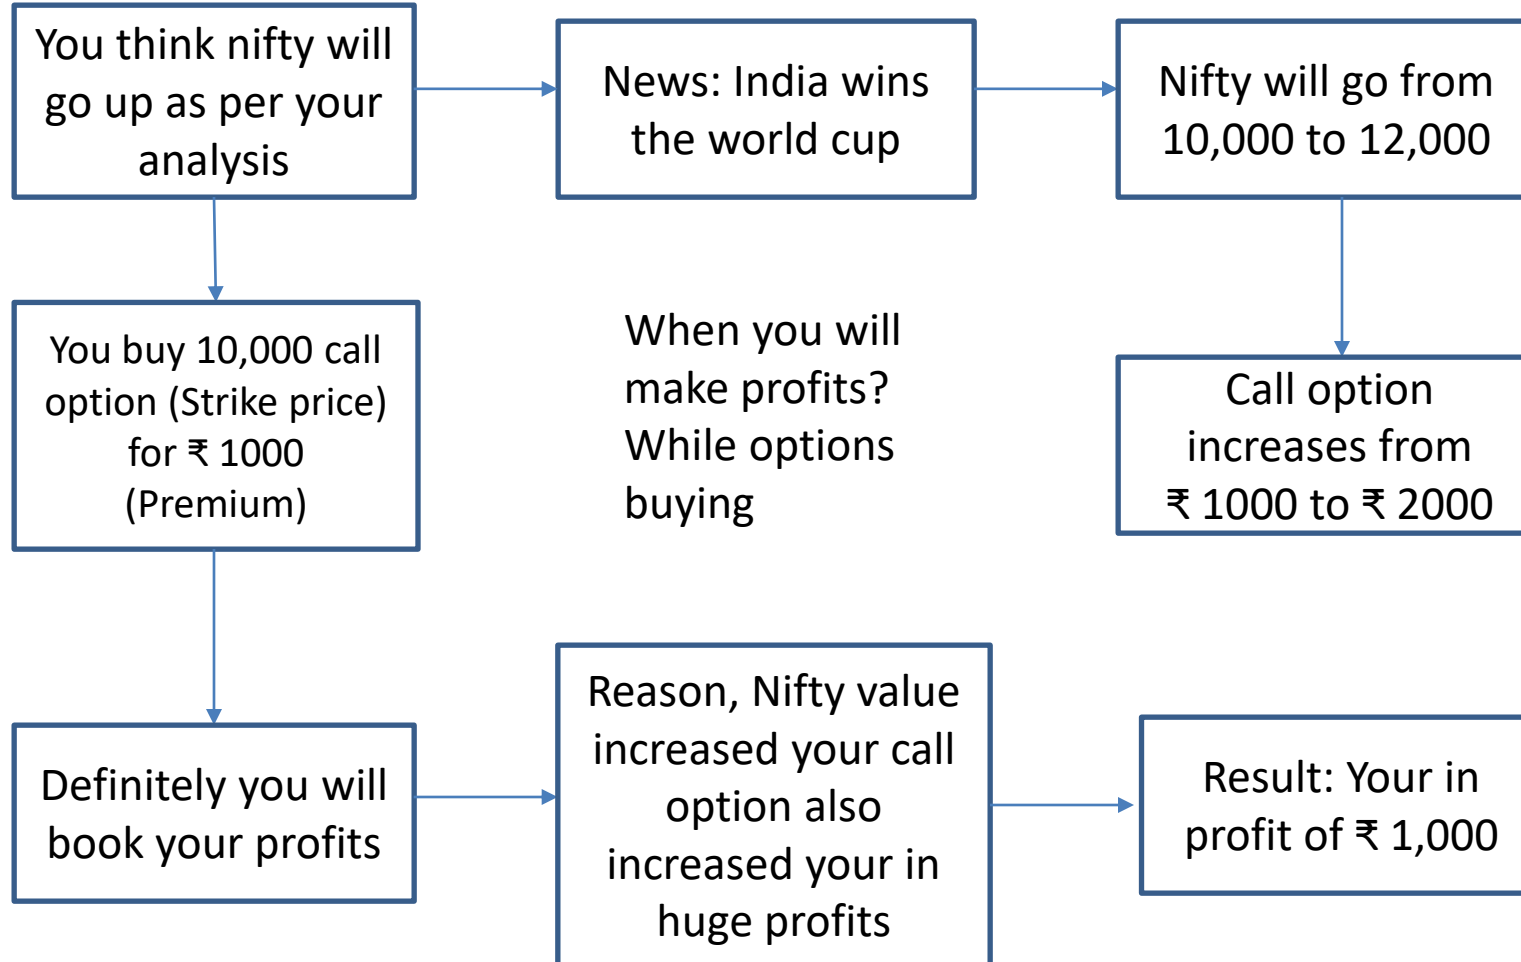

Selling a Put (Long) = **Bullish**

You think the stock will be worth more later, so you want to lock in today's price to buy later at a profit.

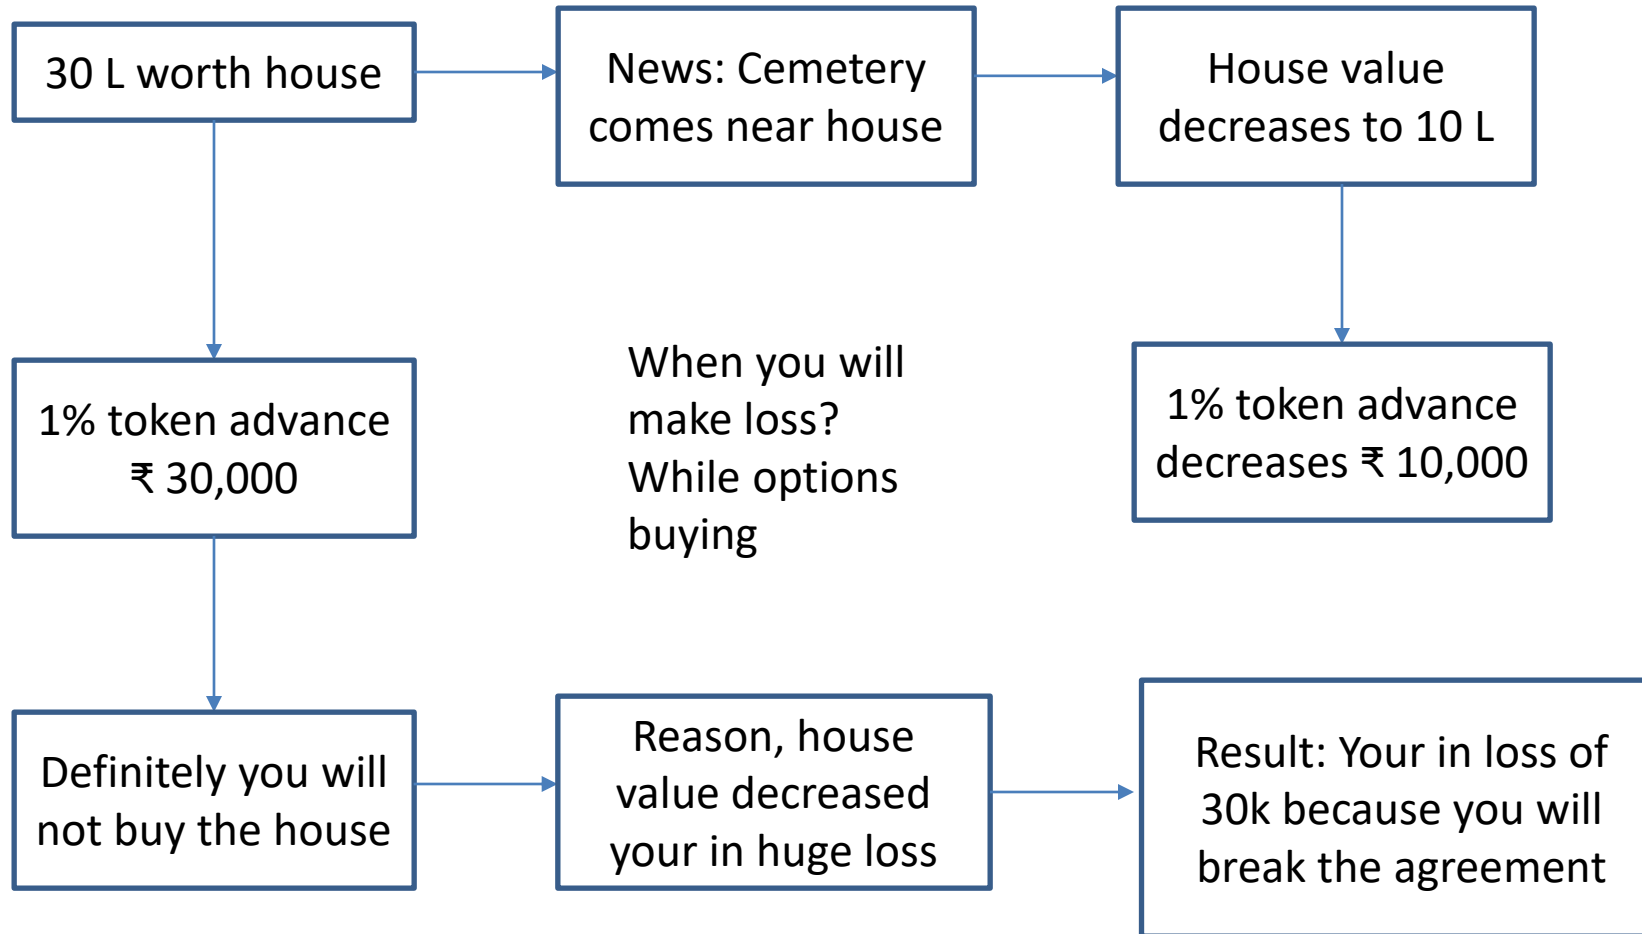

OPTIONS BUYING When you will make profits?

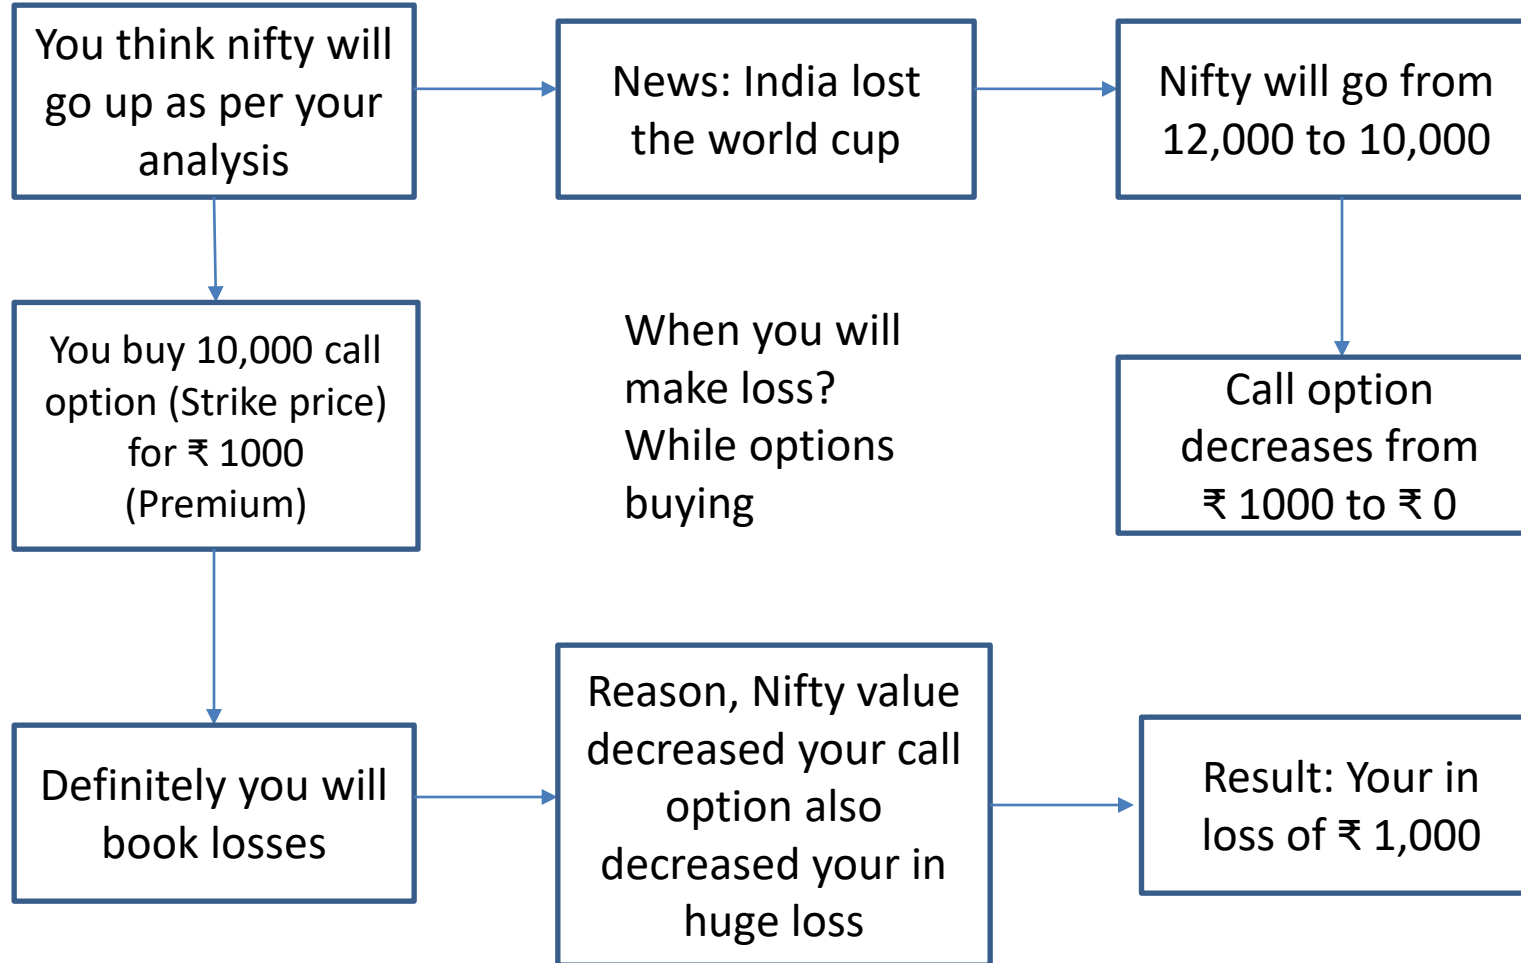

OPTIONS BUYING When you will make profits?

OPTIONS BUYING When you will make losses?

OPTIONS BUYING When you will make losses?

Option = Insurance

- Option Buyer = Insurance Buyer

- Option Seller = Insurance Seller

Option as Insurance

- You buy insurance when you are afraid the price of something might change a lot. For example, you are worried about a health issue and a high hospital bill

Option as Insurance

- You will give a small amount to LIC
- LIC will give you a large amount if something happens
- The more your hospital bill, the more money you get

Option Buyer Versus Seller

Option seller mindset

- Most probably he wont go to hospital
- He might go, but not all can go to hospital (probability)
- So if I sell a lot of policies I will make money
- There is a small chance that I will lose a lot of money

Option buyer mindset

- Most probably I wont go to hospital
- But why take that chance?
- If I go to hospital it is a lot of money
- And it is a small price to pay

Option Buyer Versus Seller

Option selling

- High Cost if something happens
- Small profit
- Low chance of event
- Makes money most of the times
- Profitable over the long run

Option buying

- Low loss if nothing happens
- High Profit
- Low chance of event
- Makes money rarely
- Loss making in the long run

TRADING ACADEMY

Call option

- In call option, if a stock goes up
 - The option price goes up
 - the buyer of the option makes money.

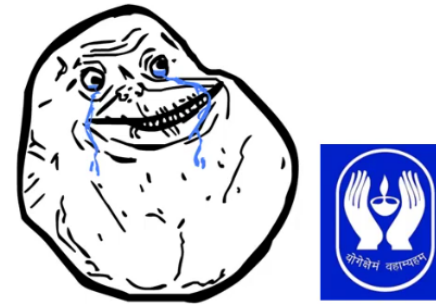

Option Seller

You

Put option

- In Put option, if a stock goes down
 - The option price goes up
 - the buyer of the option makes money.

Option Seller

You

TRADING ACADEMY

SBI 300 Call Option

If SBI is above 300, for each rupee above 300, buyer make 1 rupee

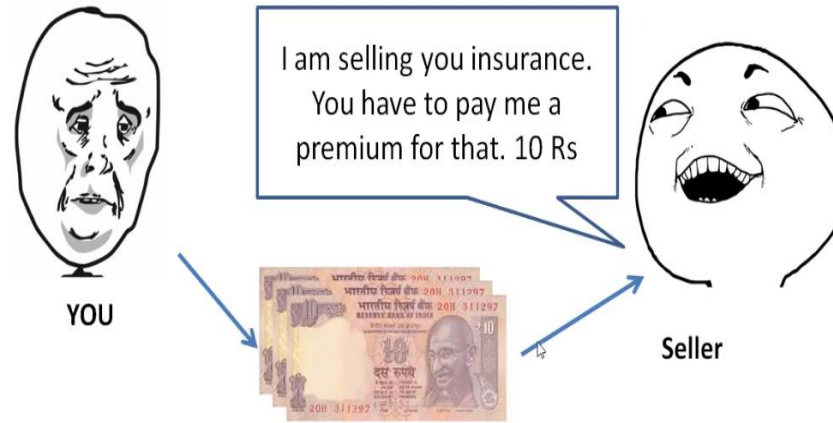

SBI Price	Option Buyer Gains	Option Seller Loses
260	0	0
298	0	0
299	0	0
300	0	0
301	1	-1
302	2	-2
303	3	-3
304	4	-4
330	30	-30
360	60	-60

SBI 300 Put Option

If SBI is below 300, for each rupee below 300, option buyer make 1 rupee

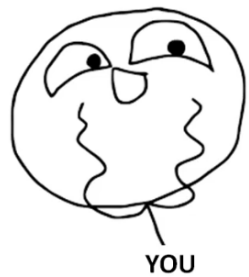

SBI Price	Option Buyer Gains	Option Seller Loses
260	40	-40
298	2	-2
299	1	-1
300	0	0
301	0	0
302	0	0
303	0	0
304	0	0
330	0	0
360	0	0

Option Premium

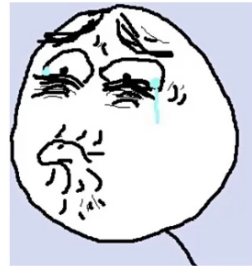

- Price of protection option buyer pays option seller

Profit and Loss

Call option buyer

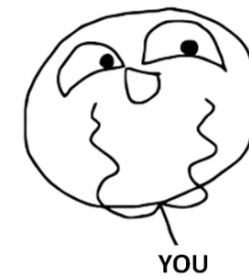

Seller

Scenario: SBI @ 360

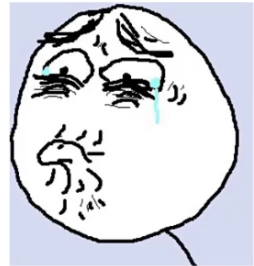

- You Make
 - $360 - 300 = +60$ profit
- You paid the premium = 10
- Your Total Profit =
 - $60 - 10 = \underline{50 \text{ Rupees}}$

- I lose
 - $300 - 360 = -60$ loss
- I get the premium = 10
- My Total Loss =
 - $-60 + 10 = \underline{50 \text{ Rupees}}$

Profit and Loss

Put option buyer

Seller

Scenario 1: SBI @ 260

- You Make
 - $300 - 260 = +40$ profit
- You paid the premium = 10
- Your Total Profit =
 - $40 - 10 = \underline{30 \text{ Rupees}}$

- I lose
 - $260 - 300 = -40$ loss
- I get the premium = 10
- My Total Loss =
 - $-40 + 10 = \underline{30 \text{ Rupees}}$

When to buy and sell

- Buy Call Option if
 - You think the stock price will go up
 - **Even if up, you need not make money (Premium)**
 - So buy call if stock will go up **a lot!**
- Sell Call Option if
 - You think the stock price will not go up
 - **If price doesn't rise you will always make money**
 - So sell call if stock will go down even the tiniest bit

When to buy and sell

- Buy Put Option if
 - You think the stock price will go down
 - **Even if up, you need not make money (Premium)**
 - So buy put if stock will go down **a lot!**
- Sell Put Option if
 - You think the stock price will not go down
 - **If price doesn't fall you will always make money**
 - So sell put if stock will go up even the tiniest bit

TRADING ACADEMY

Options trading

- Option buyer has the right to buy, no obligation (Not compulsory) to sell.
- Option seller has an obligation (Compulsory) to buy.
- Option is a contract (agreement) so it have expiry on last Thursday of every month.

ICE CREAM

Validity, 15 mins only

After 15 mins ice cream becomes zero

OPTIONS

Validity, 1 week for index options and 1 month for stock options

expiry

After 1 week/month options becomes zero

Open chain data importance.

Understanding open interest:

Open interest is the total number of option contracts outstanding for an underlying asset (Nifty or Banknifty or any stocks or commodities).

Either buyers having position not yet sold or sellers having position not yet bought.

Yellow shades represent buyers are maximum which is called as IN THE MONEY (ITM).

White shades represent sellers/writers are maximum which is called as OUT OF THE MONEY (OTM).

Strike price selection:

Strike price is the price per share for which the underlying security may be purchased or sold by the option holder.

Always we have to select yellow color shaded strike prices for call/put option buying.

Ignore the 1st yellow color shaded strike price and select the 2nd / 3rd yellow color shaded strike price, which is called as deep ITM. Because, the premium decay will be very less in these strike prices.

Understanding open interest

Basic terminologies in options.

Strike price:

Strike price is the price per share for which the underlying security may be purchased or sold by the option holder.

Option price/Premium:

It is the price which the option buyer pays to the option seller.

Expiration Day:

The day on which a derivative contract ceases to exist.

It is the last trading date/day of the contract.

Like in case of futures, option contracts also expire on the last Thursday of the expiry month.

Spot price:

It is the price at which the underlying asset trades in the spot market.

Open Interest:

Open interest is the total number of option contracts outstanding for an underlying asset.

Option buying vs Option selling

Option buying	Option selling
Less capital required	More capital required
Loss limited to premium	Loss is unlimited
Profit unlimited	Profit limited
Needs trending market (breakouts in either side up or down)	Needs rangebound market (needs sideways market inside a range)
Needs charts, technical analysis	Needs options data
Time is an enemy	Time is a friend
Preferred trading is scalping only	Preferred trading is intraday; positional

What is scalping?

- **Scalping** is a trading style specializing in taking profits on small price changes, generally soon after a trade has been entered and has become profitable.
- It requires a trader to have a strict exit strategy, because one large loss could eliminate the many small gains the trader has worked to obtain.
- Constant attention is needed.
- Huge wealth creation is not possible.
- P&L restricted.
- Only disciplined trader will succeed (scalping success ratio 5% and failure ratio is 95%).

Why banknifty scalping?

- Banknifty is always a liquid instrument.
- Best volatile instrument available in indian stock market which is suitable for scalping.
- You can make profit in any direction (up or down).
- Gives good return on our capital (even 100% returns).
- We can do many trades in a single day.
- Don't want to study and research a lot.
- Zero overnight position risks.
- We can start with small capital.

Qualities of a successful scalper.

- Finding out the right trade setup.
- Perfect entry.
- Perfect risk : reward ratio. (options 20 pts; futures 50 pts)
- Perfect exit.
- Booking partial profits if necessary.
- Good money management.

Scalping

requires

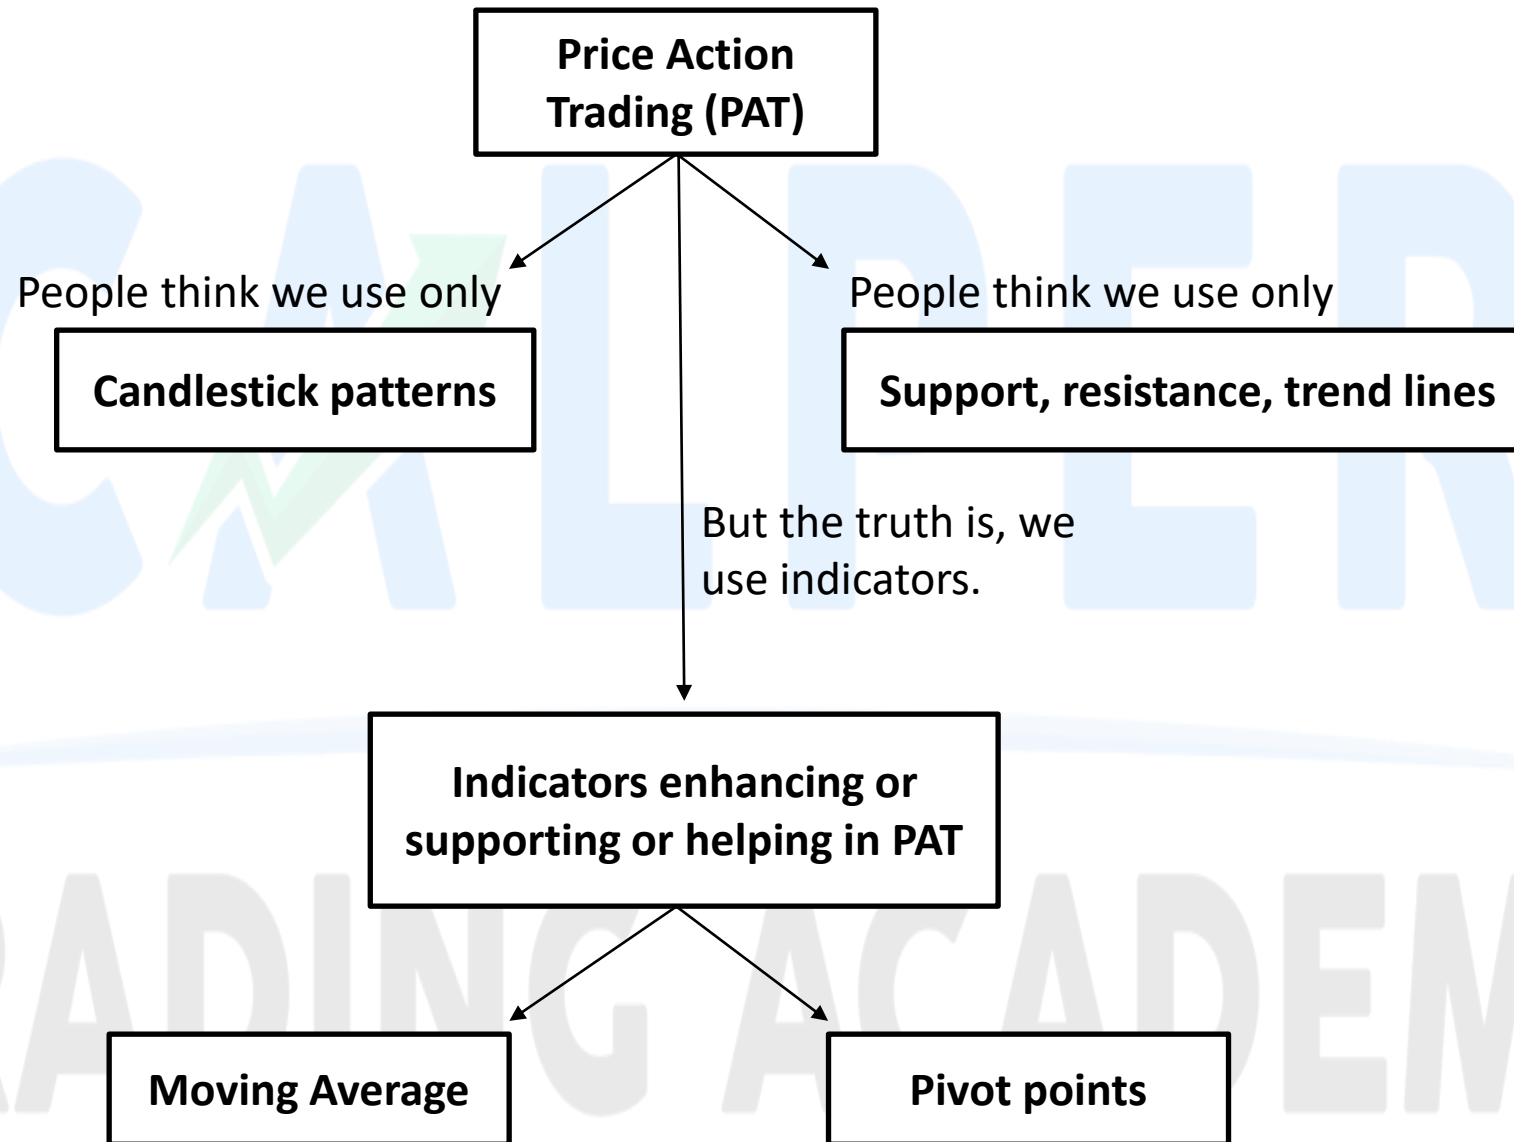

**Strong technical
knowledge**

When you're strong, you can easily do

**Price Action
Trading (PAT)**

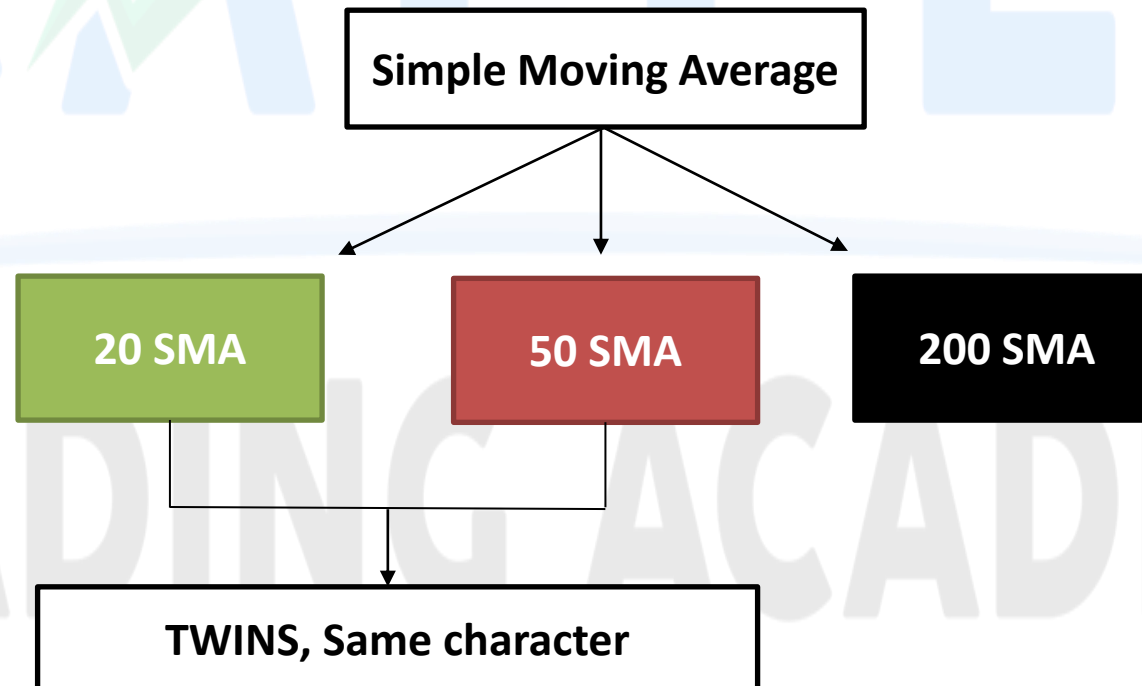

using

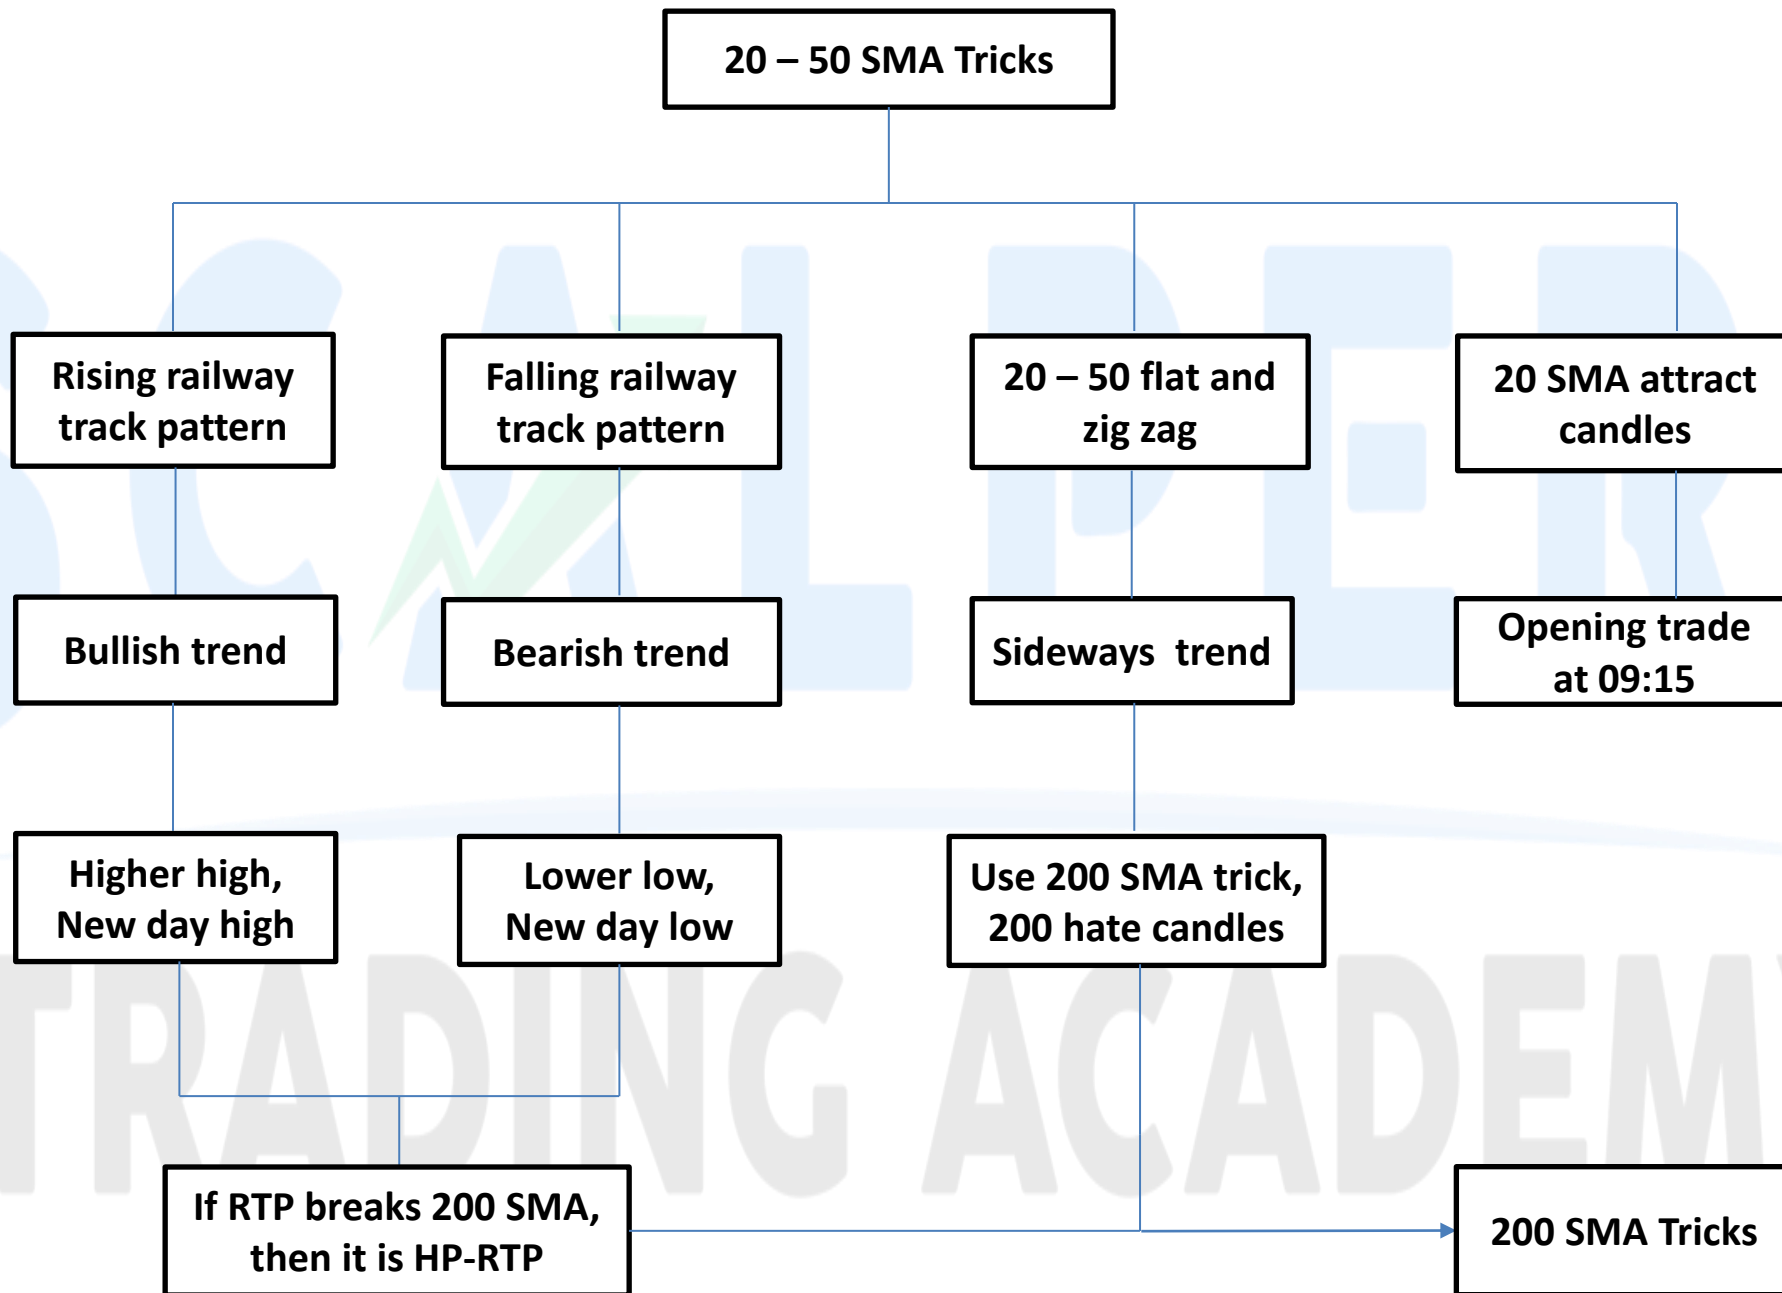

**Price Action
Trading Indicators**

Moving Average

- A moving average is a technique often used in technical analysis because it is a trend following indicator.
- Simple moving averages (SMA) takes the arithmetic mean of a given set of prices over the past number of candles, for example over the previous 20, 50, 100, or 200 days.

The Powerful 20 SMA and 50 SMA (use only for intraday 5 mins chart)

Simple Moving Average 20 and 50 :

- The 20 and 50 is so important to intraday traders that no chart is ever studied or viewed without it. That's because of its power and reliability.
- No chart is a chart unless it is accompanied by this important technical indicator.
- We use it on every time frame or chart we look at.

General character of 20 and 50 –

- Most of your trades should be in sync with the 20 and 50.
- If the 20 and 50 is rising in a smooth fashion, your focus should almost always be long.
- Conversely, if the 20 and 50 is declining in a smooth fashion, your focus should almost always be short.
- If the 20 and 50 is flat, your focus should be to avoid trading.

a) Rising Railway track pattern –

- If and when the 20 - 50 is rising, both 20 – 50 it will serve as strong support.
- Higher highs and higher lows are the sign of bullishness.
- In that case, look for buy/long at or near 20 - 50.
- It is safe to enter long when day high is broken with a green candle close.
- Target: Nearest CPR level; SL: Below 20 sma.

b) Falling Railway track pattern –

- If the 20 - 50 is declining, it will serve as strong overhead resistance.
- Lower highs and lower lows are the sign of bearishness.
- In that case, look for sell/short at or near 20 - 50.
- It is safe to enter short when day low is broken with a red candle close.
- Target: Nearest CPR level; SL: Above 20 sma.

GomathiShankar published on TradingView.com, March 27, 2020 23:28:58 IST

NSE:BANKNIFTY, 5 19969.00 ▲ +355.10 (+1.81%) O:19988.15 H:19998.65 L:19891.75 C:19931.10

c) **20 – 50 flat and zig zag –**

- When a stock is consolidating in a sideways pattern, the 20 - 50 will be flat, zig zag and usually positioned right in the middle of the sideways trend.
- If and when this is the case, it's better to avoid the trade.

TRADING ACADEMY

d) 20 SMA attract candles like a magnet

(UNIQUE CHARACTER ONLY FOR 20 SMA) –

- Stocks cannot remain extended too far above or below the 20 sma.
- If and when stocks get too far, a violent snap back is expected.
- This is when the Intraday Trader can intelligently look to take advantage of a counter trend move.
- We should take position for a very quick scalping, not recommended for trailing profits.
- Reversal most likely to happen exactly at R1/PDH; S1/PDL.
- Target is always 20 sma only.

SCALPERS

QUIZ TIME

TRADING ACADEMY

The Mighty 200 MA

(use only for intraday 5 mins chart)

200 Period Simple Moving Average (200ma) –

- The 200 is so universally watched, in all time frames, that for all practical purposes,
- It is the king of all moving averages.
- So, rarely stocks fail to obey the 200.
- It's power, force, and reliability are so great, We use the 200 on all time frames.

General character of 200 -

a) Flatness is king: -

- While the 20 is most powerful when it is rising and declining (trending), the 200 is most powerful when it is flat.

b) 200 SMA hate candles when 20-50 are flat and zig zag:

- Candles doesn't have the power to break 200 when 20-50 are flat & zig zag.
- Whenever a stock declines to a flat 200ma, it will almost always experience some form of rebound.
- If the rare cases in which it does not rebound, the stock is almost certain to at least stop for a while.

Similarly,

- Whenever a stock rallies to a flat, overhead 200ma, it will almost always experience some form of resistance back down.
- If the rare cases in which it does not experience a reversal back down, the stock is almost certain to at least stop for a while.

Trade decision:

- Entry will be exactly at the reversal candle at 200 sma.
- Long/short target will be 20 sma.

NSE:BANKNIFTY, 5 19969.00 ▲ +355.10 (+1.81%) O:19988.15 H:19998.65 L:19891.75 C:19931.10

c) 200 SMA love candles when 20-50 are forming RTP (High probable RTP):

- Candles have the power to break 200, when 20-50 are forming RTP.
- When candles are below 200 and if 20-50 are forming RTP then we can expect the candles to break 200 easily due to the influence of RTP where 20-50 breaks 200 from bottom to top.
- It also denotes short covering or trend reversal if candles & 20-50 crosses 200 after several days.

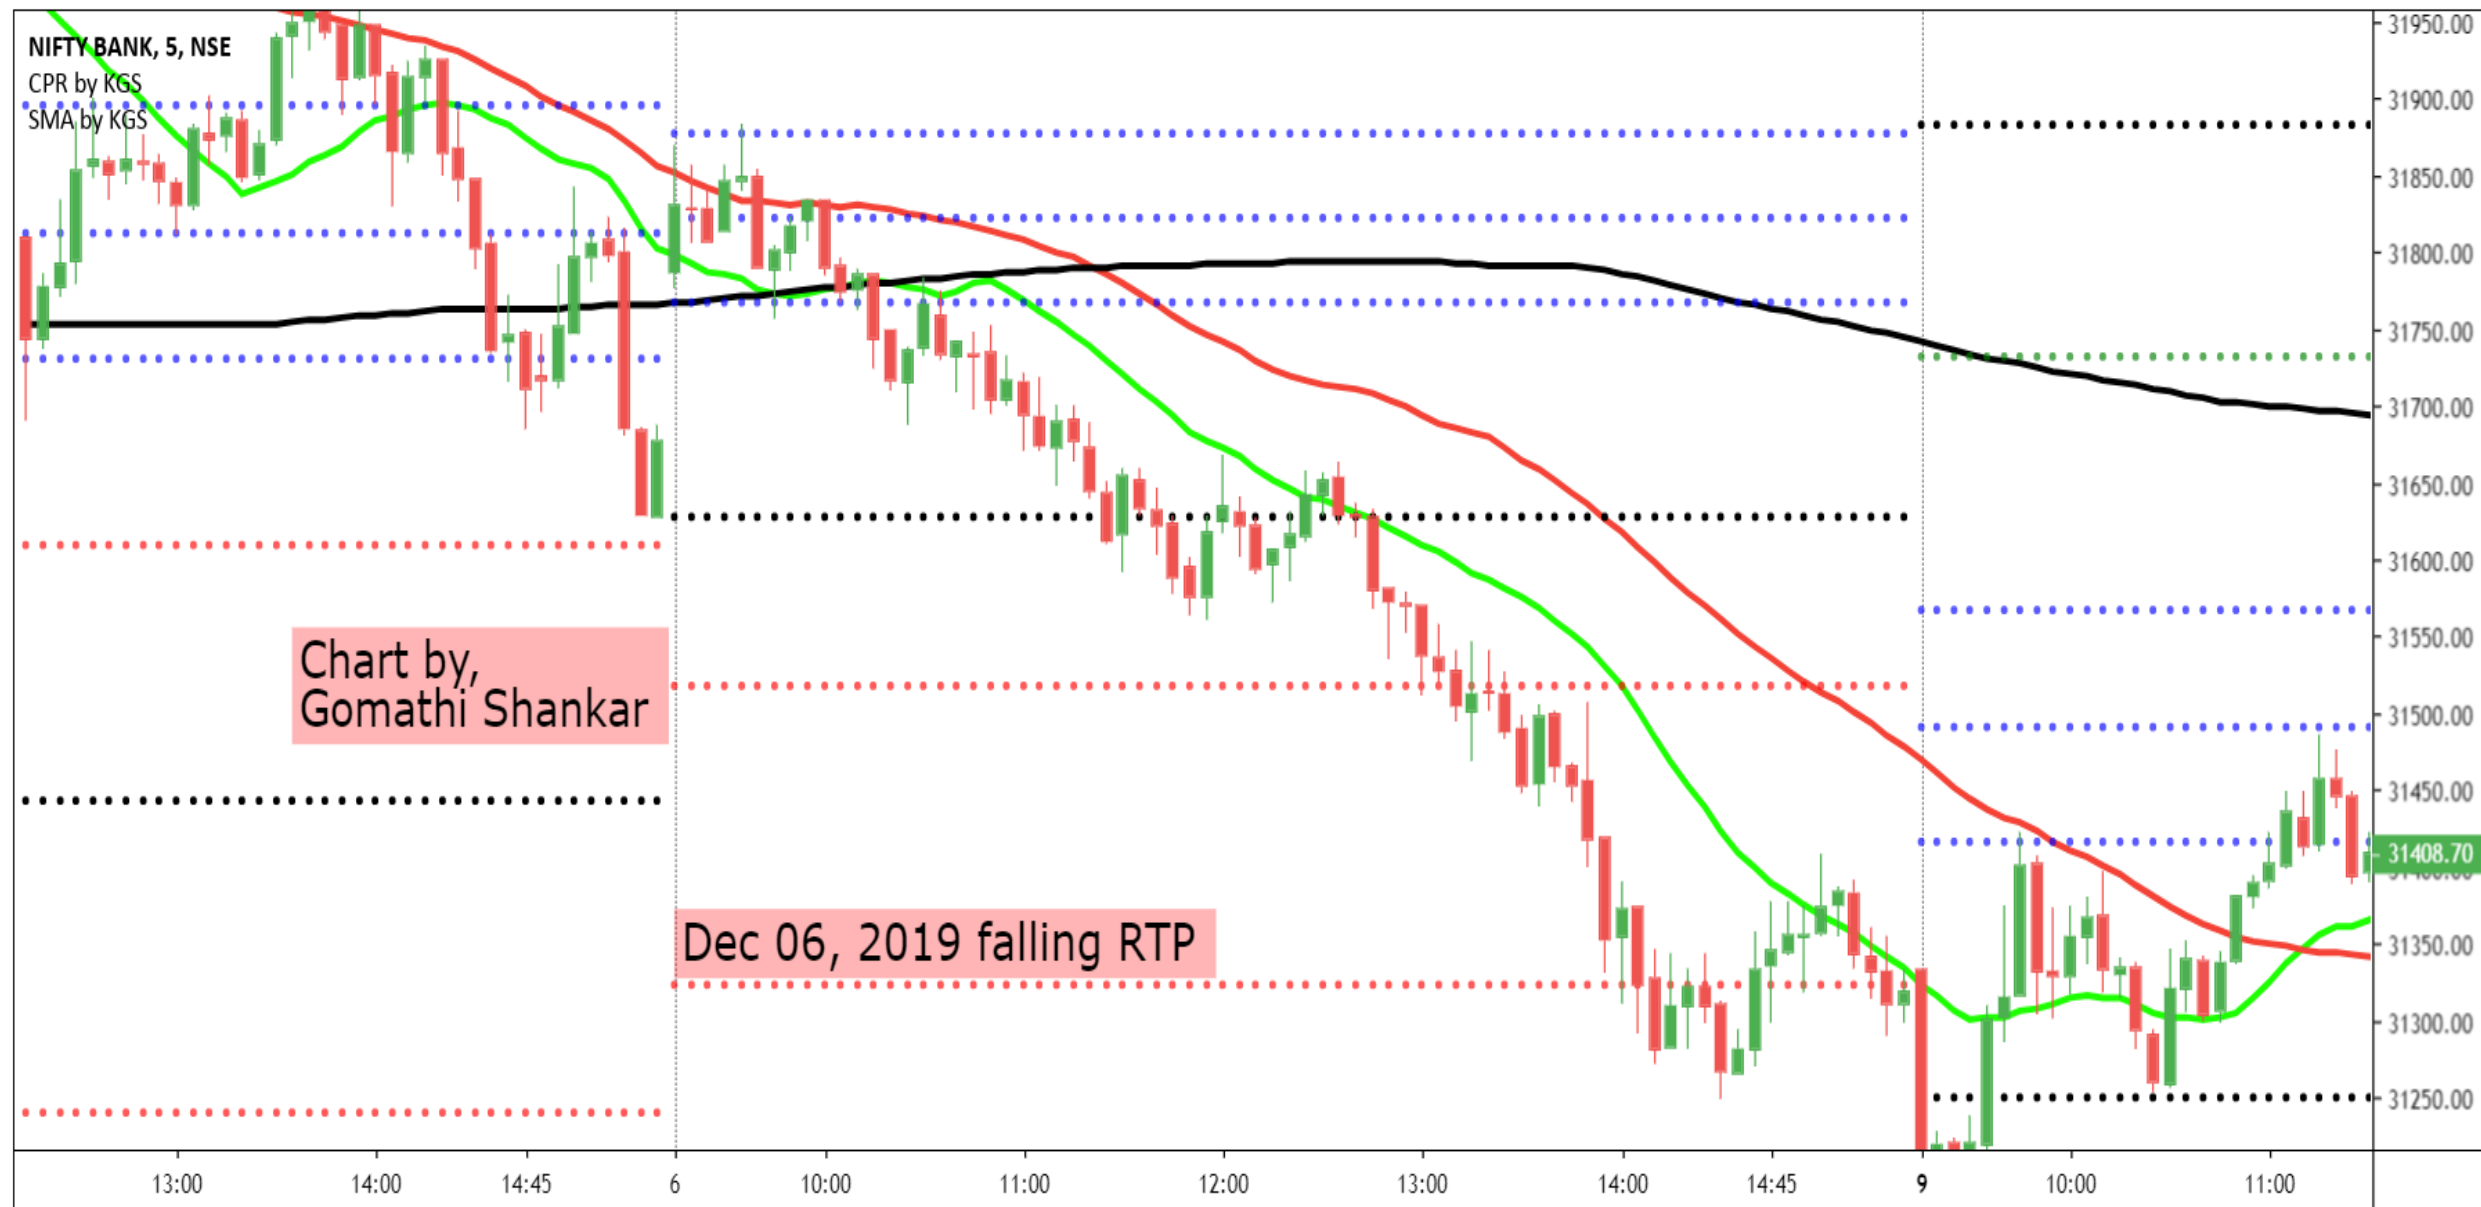

Similarly,

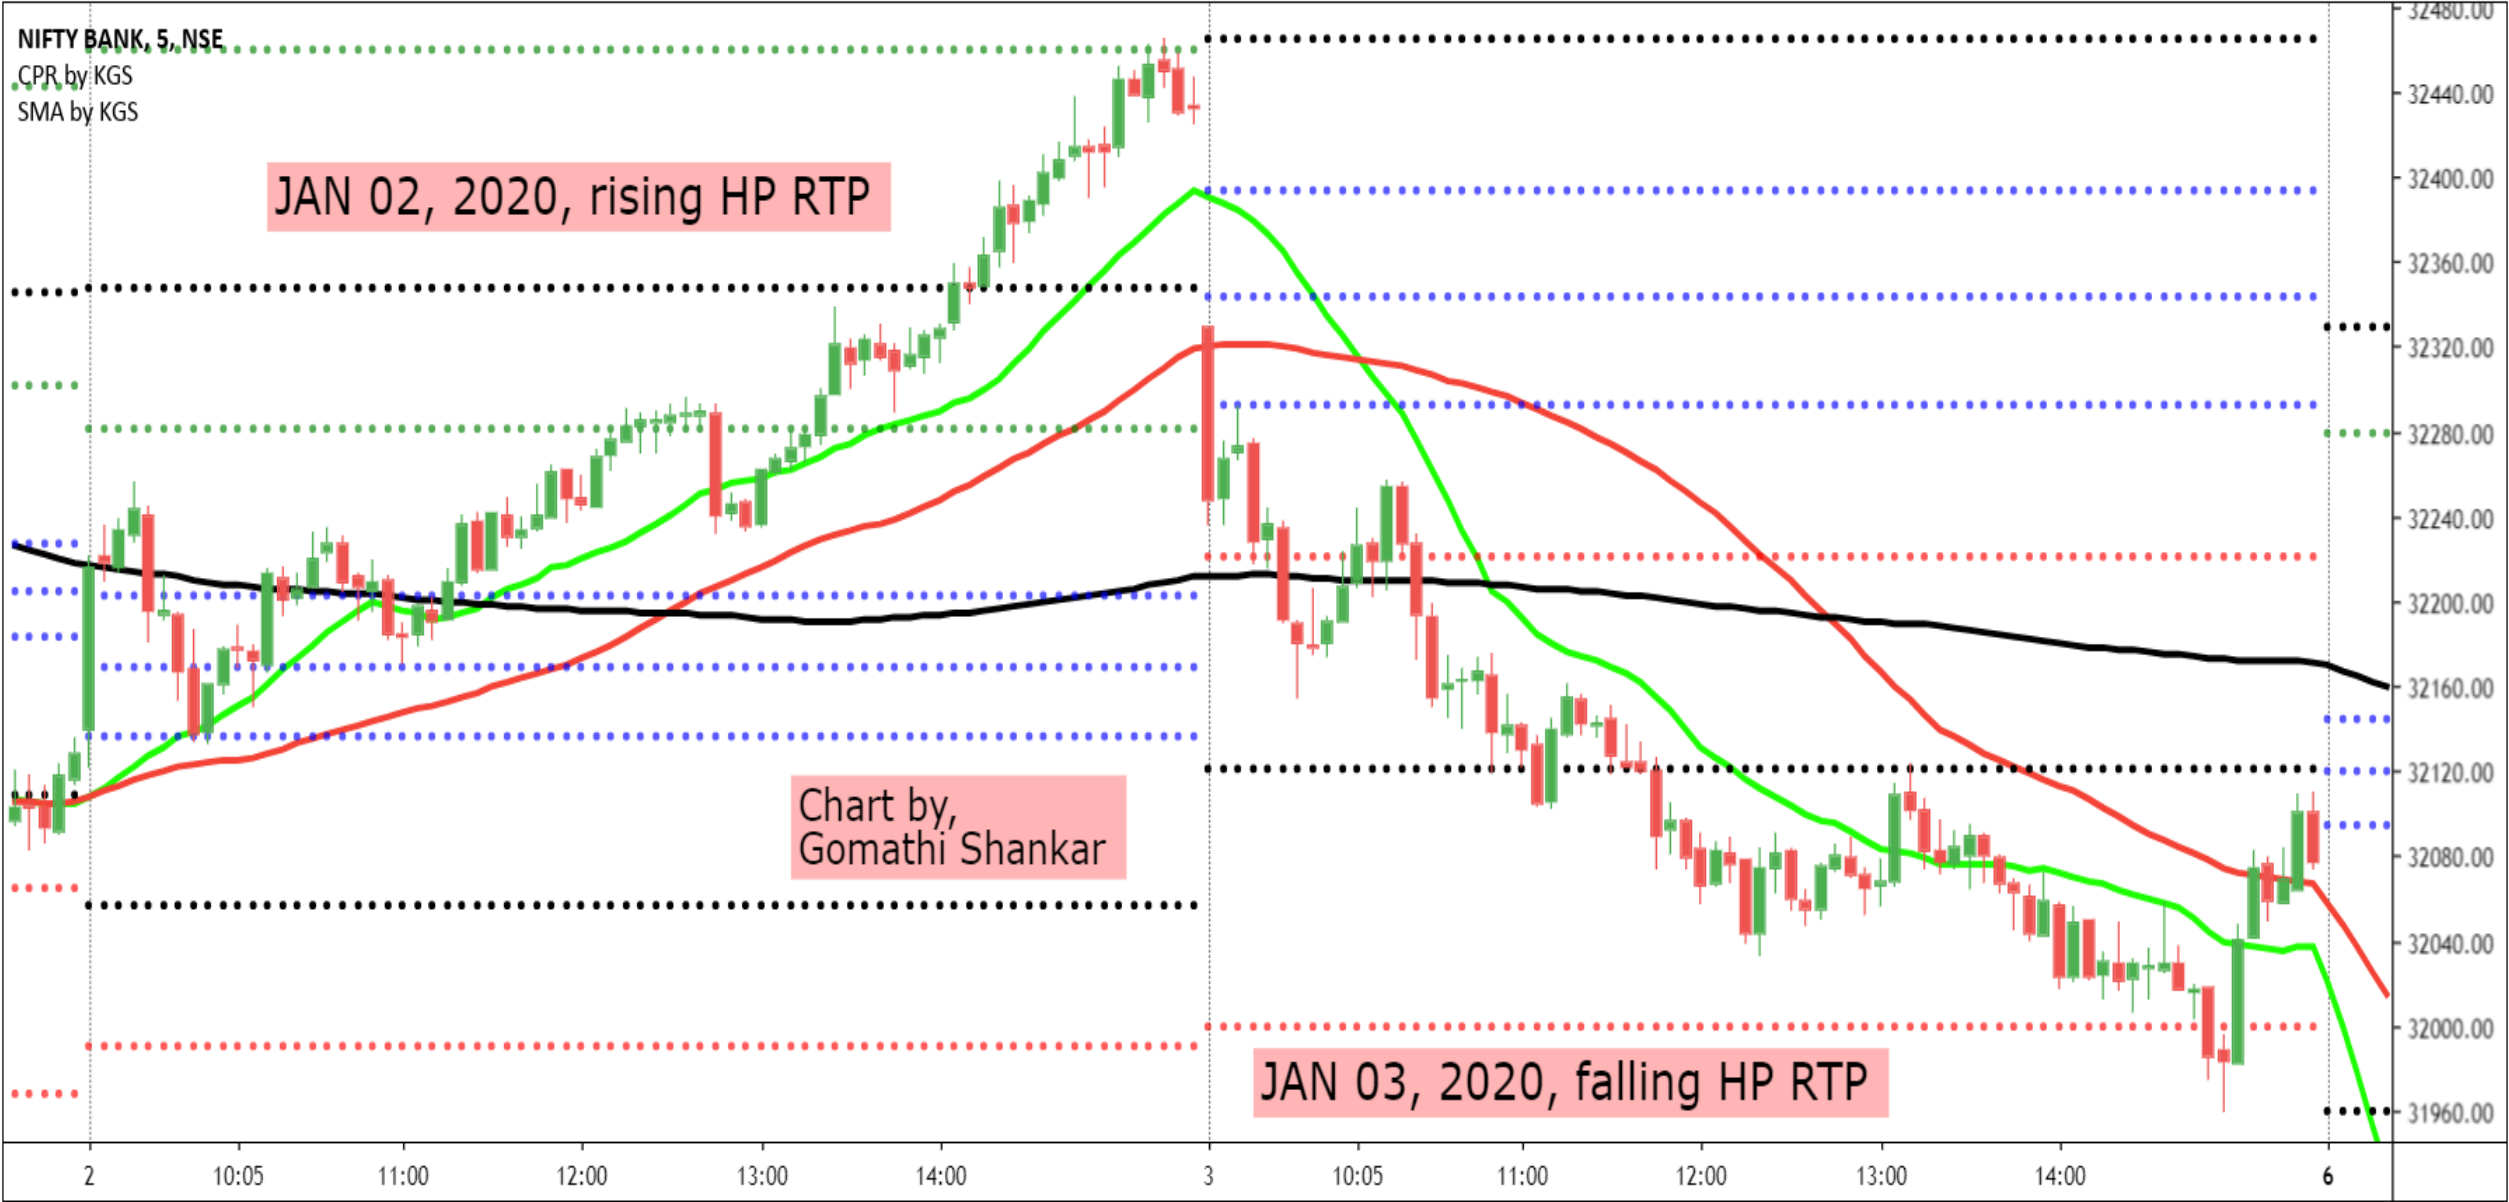

- When candles are above 200 and if 20-50 are forming RTP then we can expect the candles to break 200 easily due to the influence of RTP where 20-50 breaks 200 from top to bottom.
- It also denotes long unwinding or trend reversal if candles & 20-50 crosses 200 after several days.

Pivot Points

(use only for intraday 5 mins chart)

What is a Pivot Point?

- A pivot point is a technical analysis indicator, or calculations, used to determine the overall trend of the market over different time frames.
- The pivot point itself is simply the average of the high, low and closing prices from the previous trading day.
- On the subsequent day, trading above the pivot point is thought to indicate ongoing bullish sentiment, while trading below the pivot point indicates bearish sentiment.

Types of pivot points

There are 6 types of pivot points:

- Classic
- Traditional
- Fibonacci
- Demark
- Woodie
- Camarilla

All these type of pivot points
Tells us the intraday levels like
entry, exit, stop loss.

Why do we use CPR pivot points?

CPR not only shows the intraday levels like entry, exit, stop loss.

But, also the intraday trend through wide variety of strategies which will be discussed henceforth.

So, CPR is a dual role indicator

CPR Pivot Points Formula:

Expanded Floor Pivots Formula

$$R4 = R3 + (R2 - R1)$$

$$R3 = R1 + (\text{High} - \text{Low})$$

$$R2 = \text{Pivot} + (\text{High} - \text{Low})$$

$$R1 = 2 \times \text{Pivot} - \text{Low}$$

$$TC = (\text{Pivot} - BC) + \text{Pivot}$$

$$\text{Pivot} = (\text{High} + \text{Low} + \text{Close})/3$$

$$BC = (\text{High} + \text{Low})/2$$

$$S1 = 2 \times \text{Pivot} - \text{High}$$

$$S2 = \text{Pivot} - (\text{High} - \text{Low})$$

$$S3 = S1 - (\text{High} - \text{Low})$$

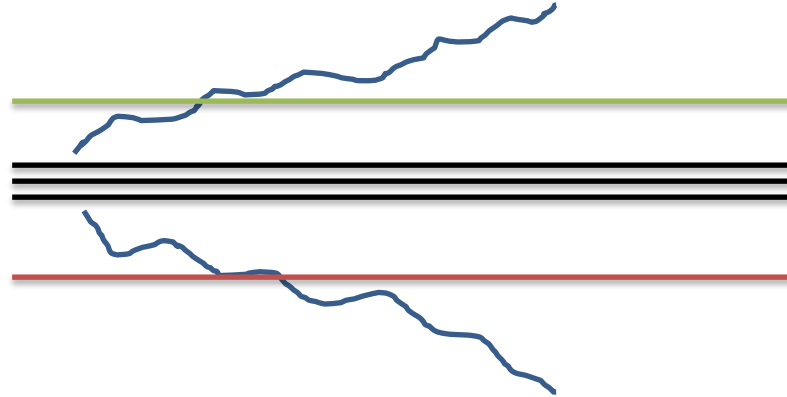

$$S4 = S3 - (S1 - S2)$$

CPR

TABLE 5.2: Expanded Formula

Moving average	CPR
Trending:	Trending:
• RTP (20-50 parallel) • HP-RTP (20-50 breaking 200)	• Narrow CPR • Inside CPR • Trend reversal CPR • Asc or Des CPR • Virgin CPR
Sideways:	Sideways:
• 20-50 flat & zig zag • 200 sma hate candles	• Wide CPR • Outside CPR • Camarilla + CPR • Asc or Des CPR • Virgin CPR

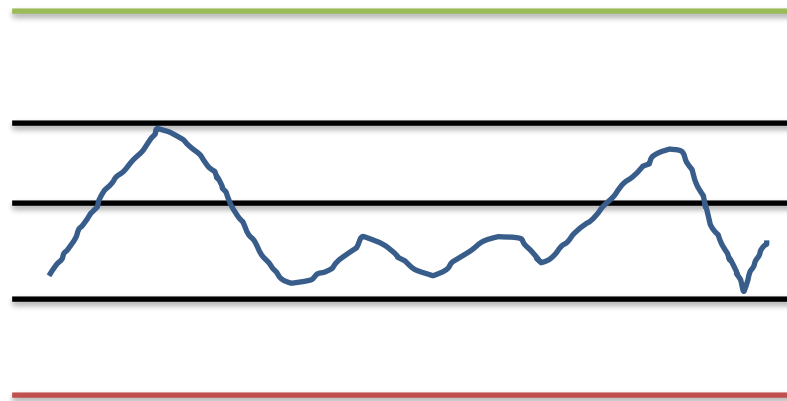

**Narrow CPR
(Trending day expected)**

R1 as well as PDH

S1 as well as PDL

**Wide CPR
(sideways day expected)**

R1 as well as PDH

S1 as well as PDL

Narrow CPR:

- Ncpr denotes trending day, but all Ncpr will not be a trending day because we need RTP in a Ncpr.
- $\text{Ncpr} + \text{RTP} = \text{trending day}.$
- If there is no RTP in a Ncpr then the market will be a sideways or less trending. So, we can expect a RTP and trending market on the next day.

Wide CPR:

- Wcpr denotes sideways day, but all Wcpr will not be a sideways day because we may get RTP in a Wcpr.
- In that case we need to book quick profits and exit.
- $\text{Wcpr} + 20\text{-}50 \text{ flat \& zig zag} = \text{sideways day}.$

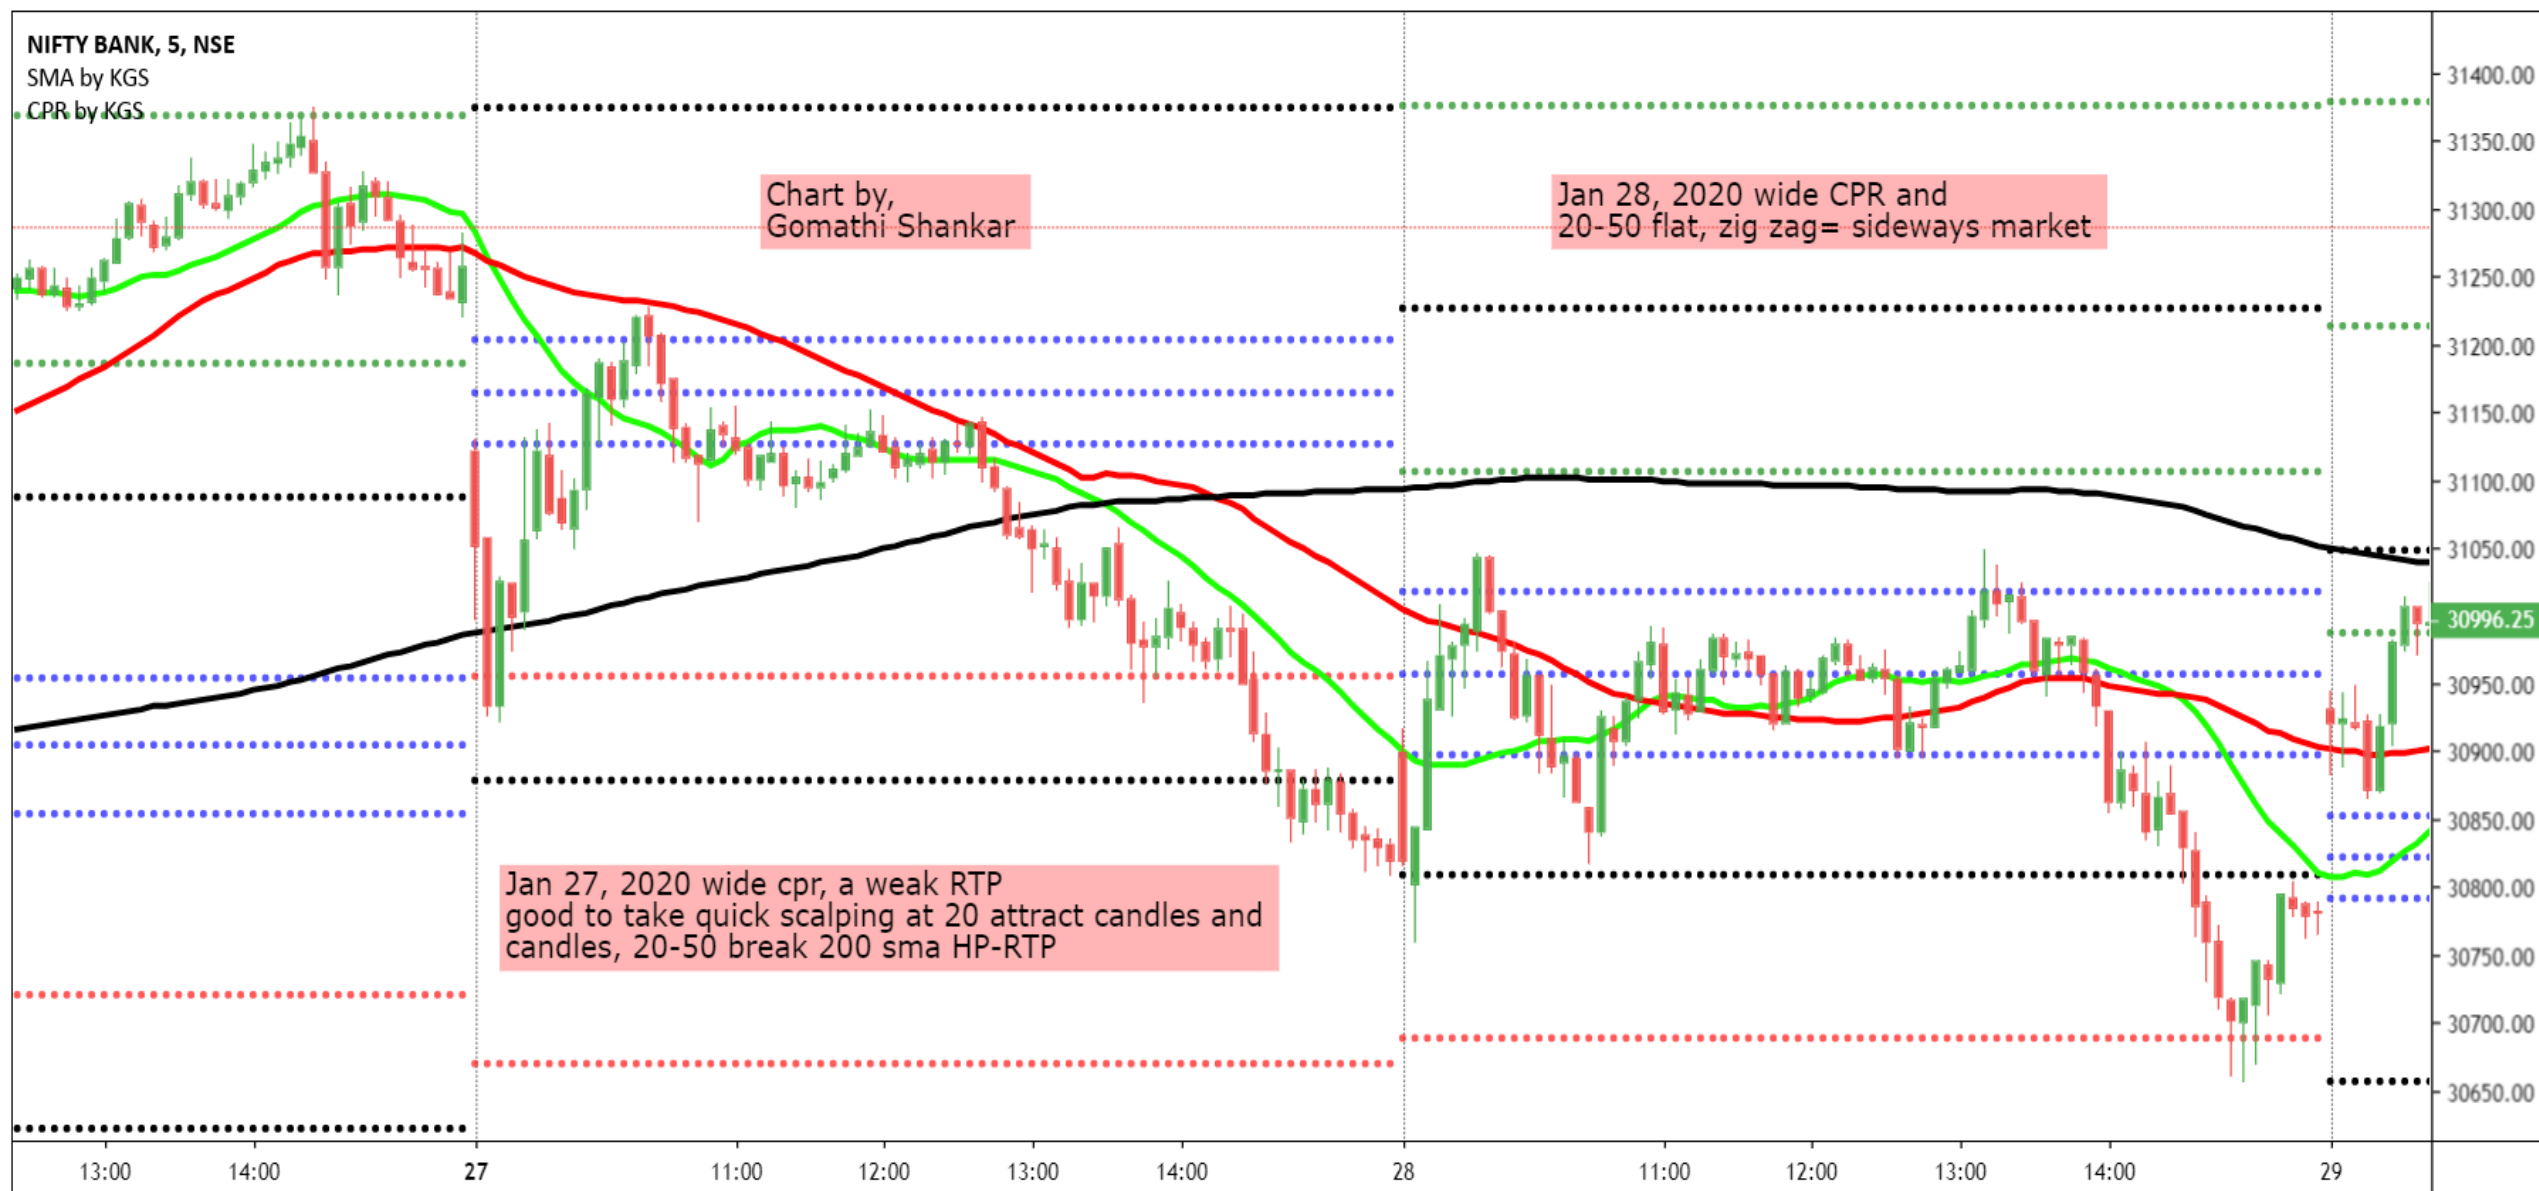

GomathiShankar published on TradingView.com, February 06, 2020 23:31:32 IST

NSE:BANKNIFTY, 5 31304.05 ▲ +302.10 (+0.97%) **O:**31289.80 **H:**31290.40 **L:**31269.90 **C:**31286.70

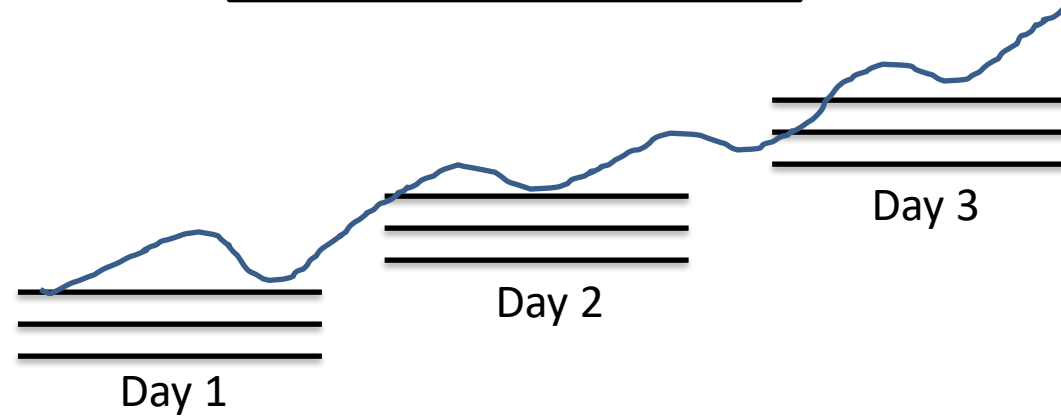

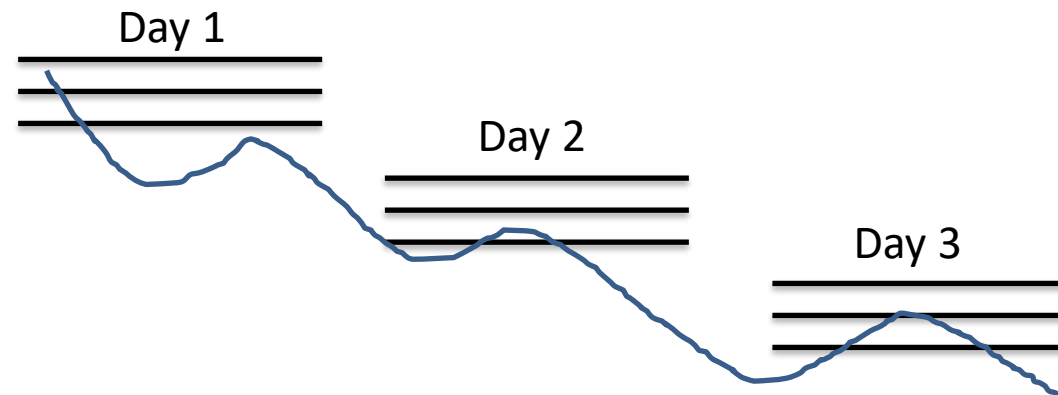

**Ascending CPR
(Bullish trend expected)**

**Descending CPR
(Bearish trend expected)**

Ascending cpr:

In an ascending cpr, the overall trend is assumed to be bullish so our intention should be on the long side only.

Market is expected to take a pull back or retracement at cpr and then the bull rally continues.

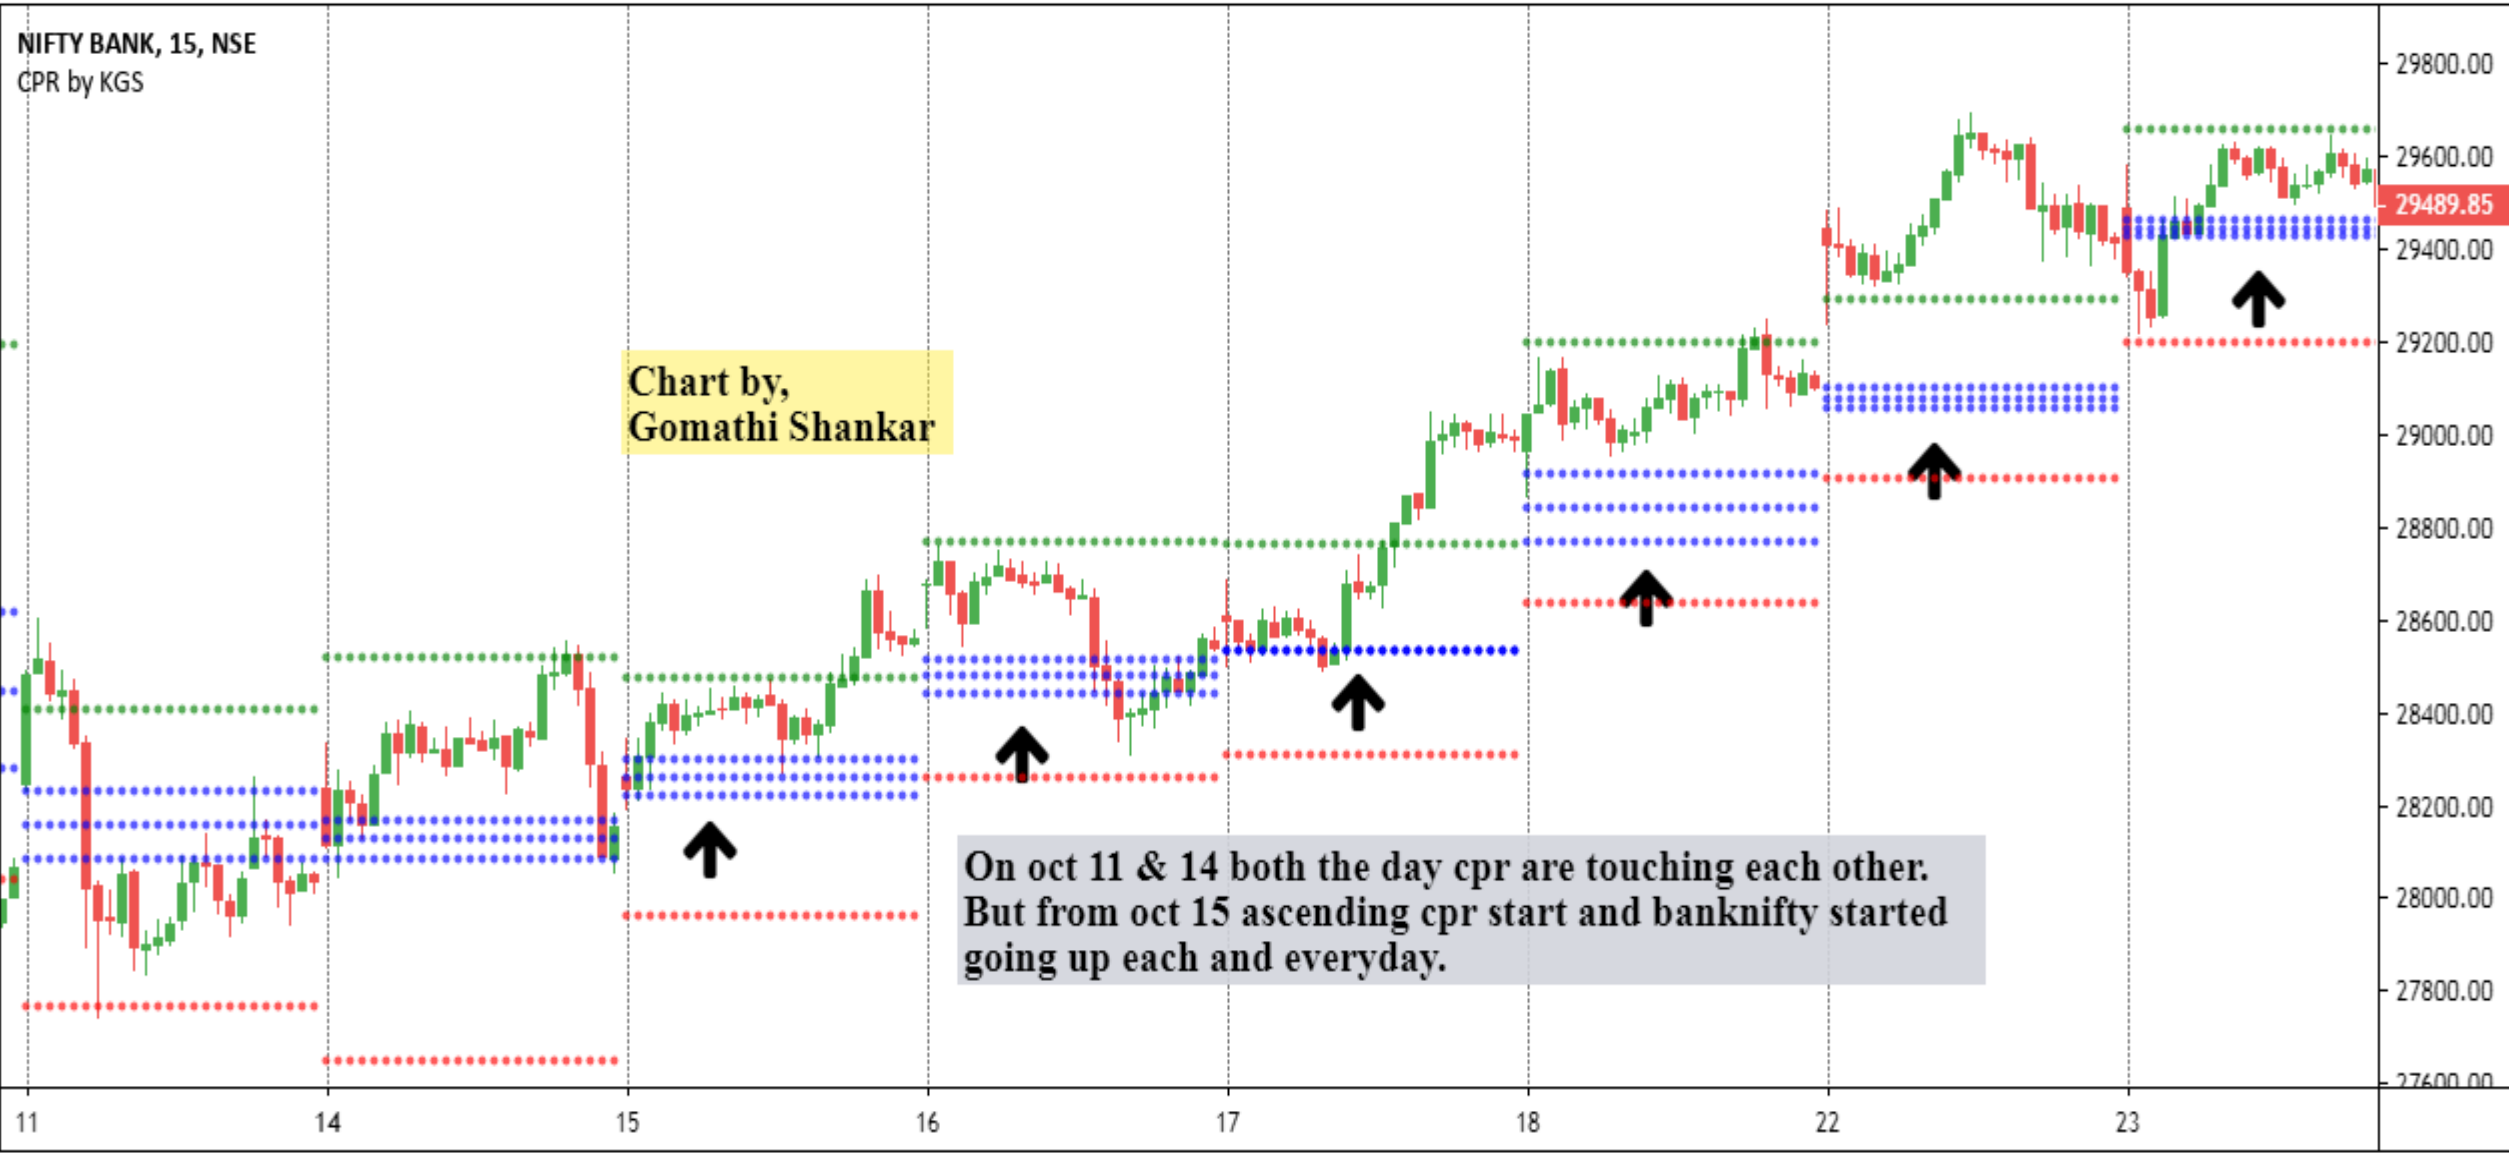

In this case PDL will not be broken, if it's broken and market close below PDL we can expect trend reversal.

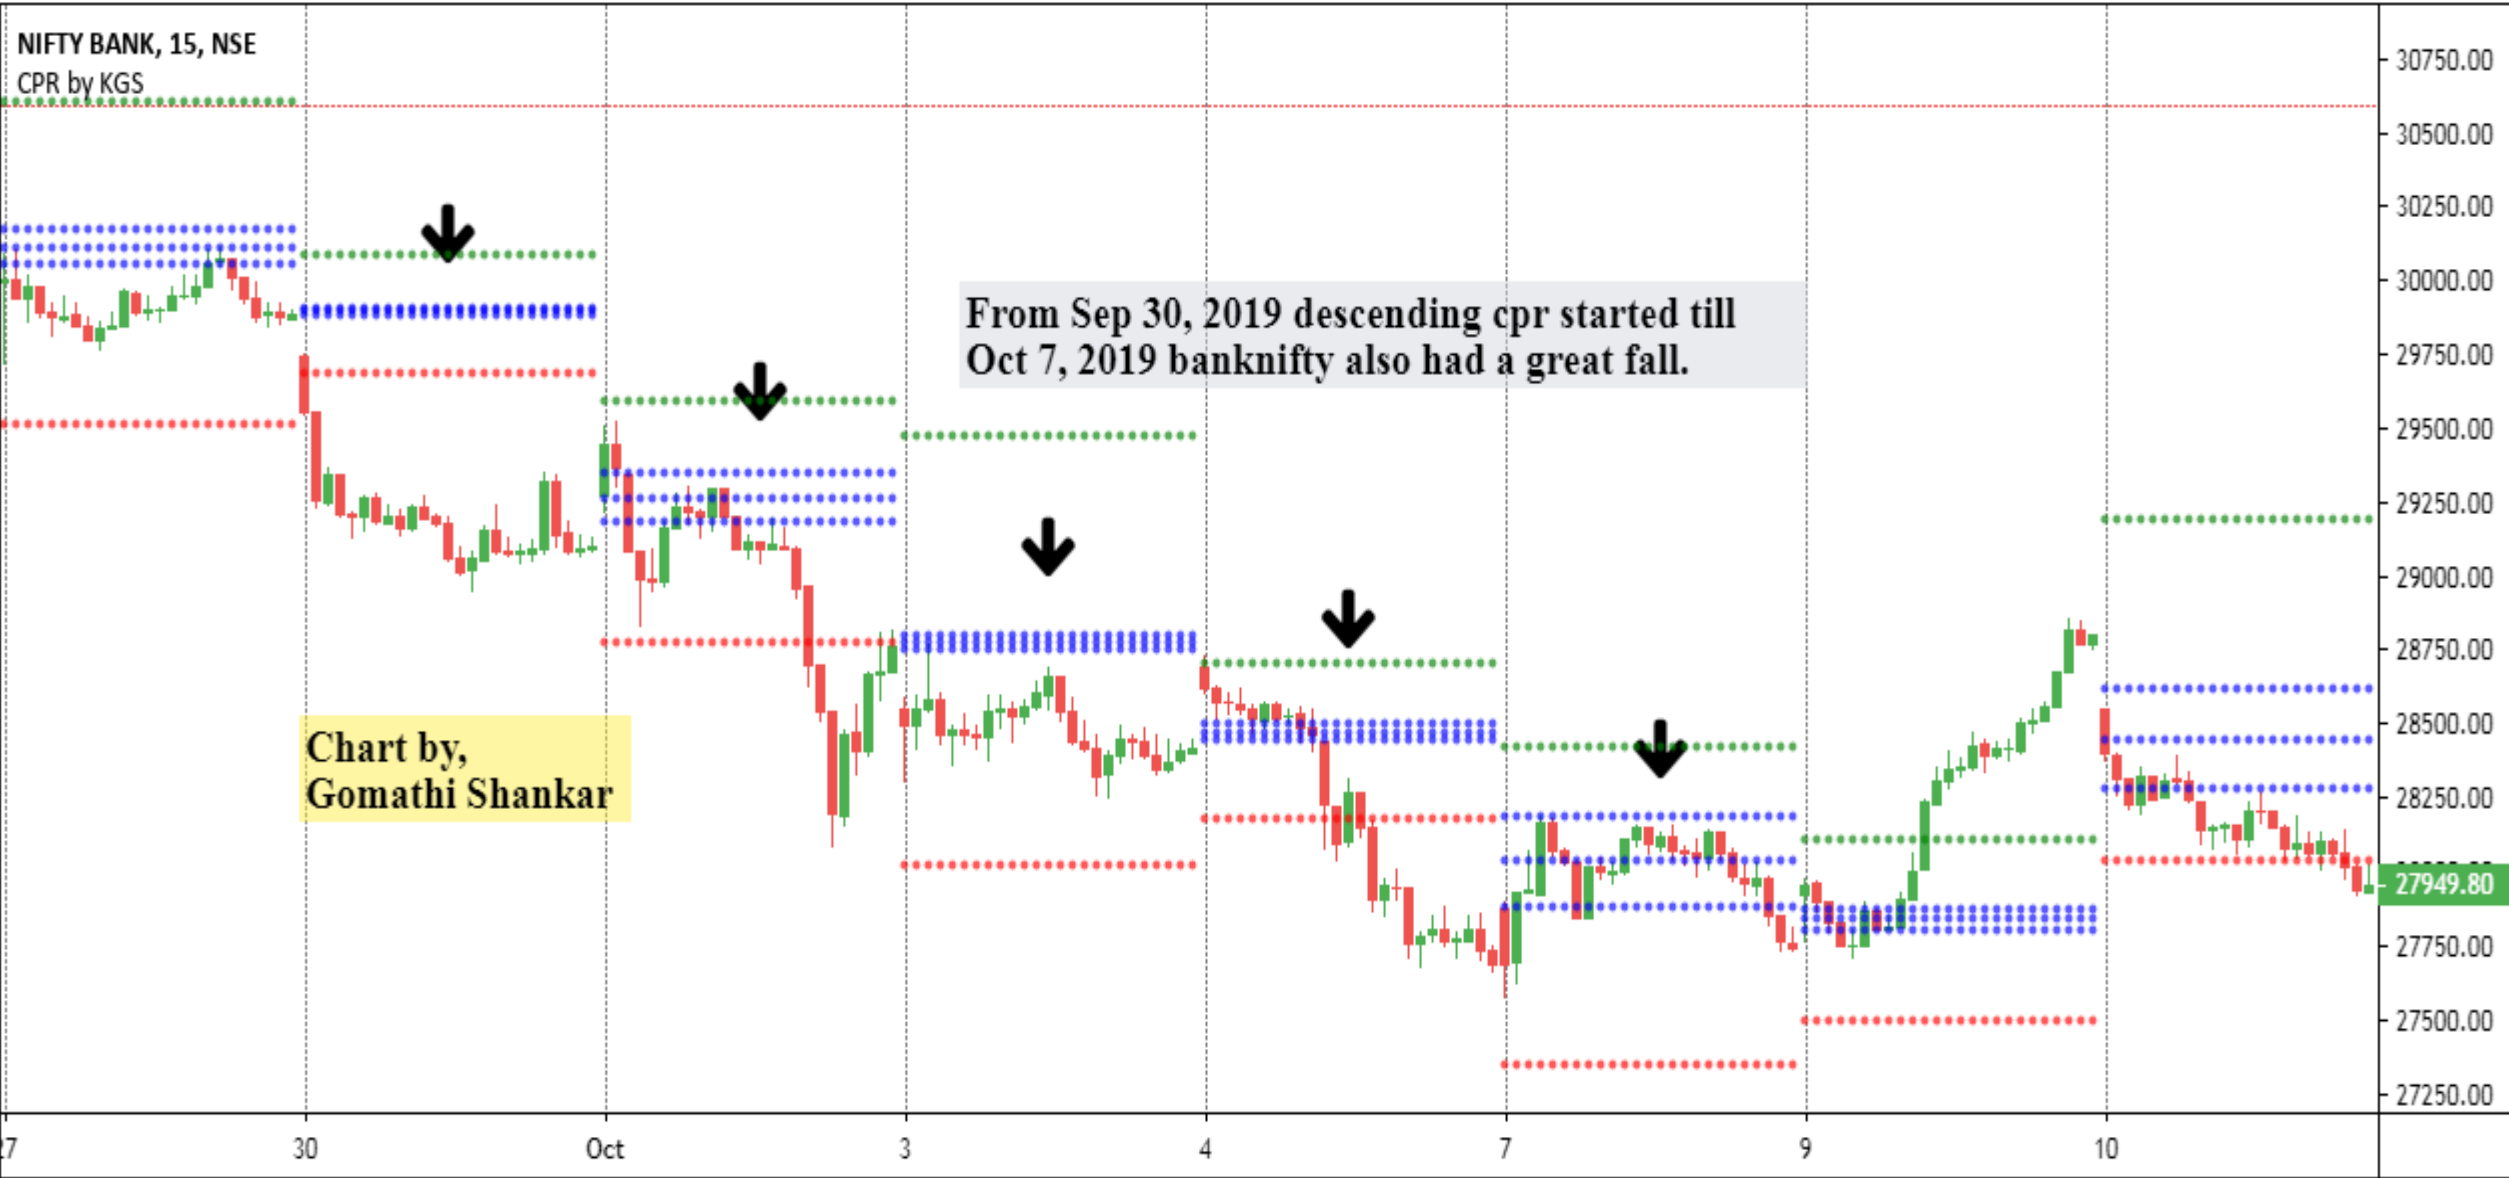

Descending cpr:

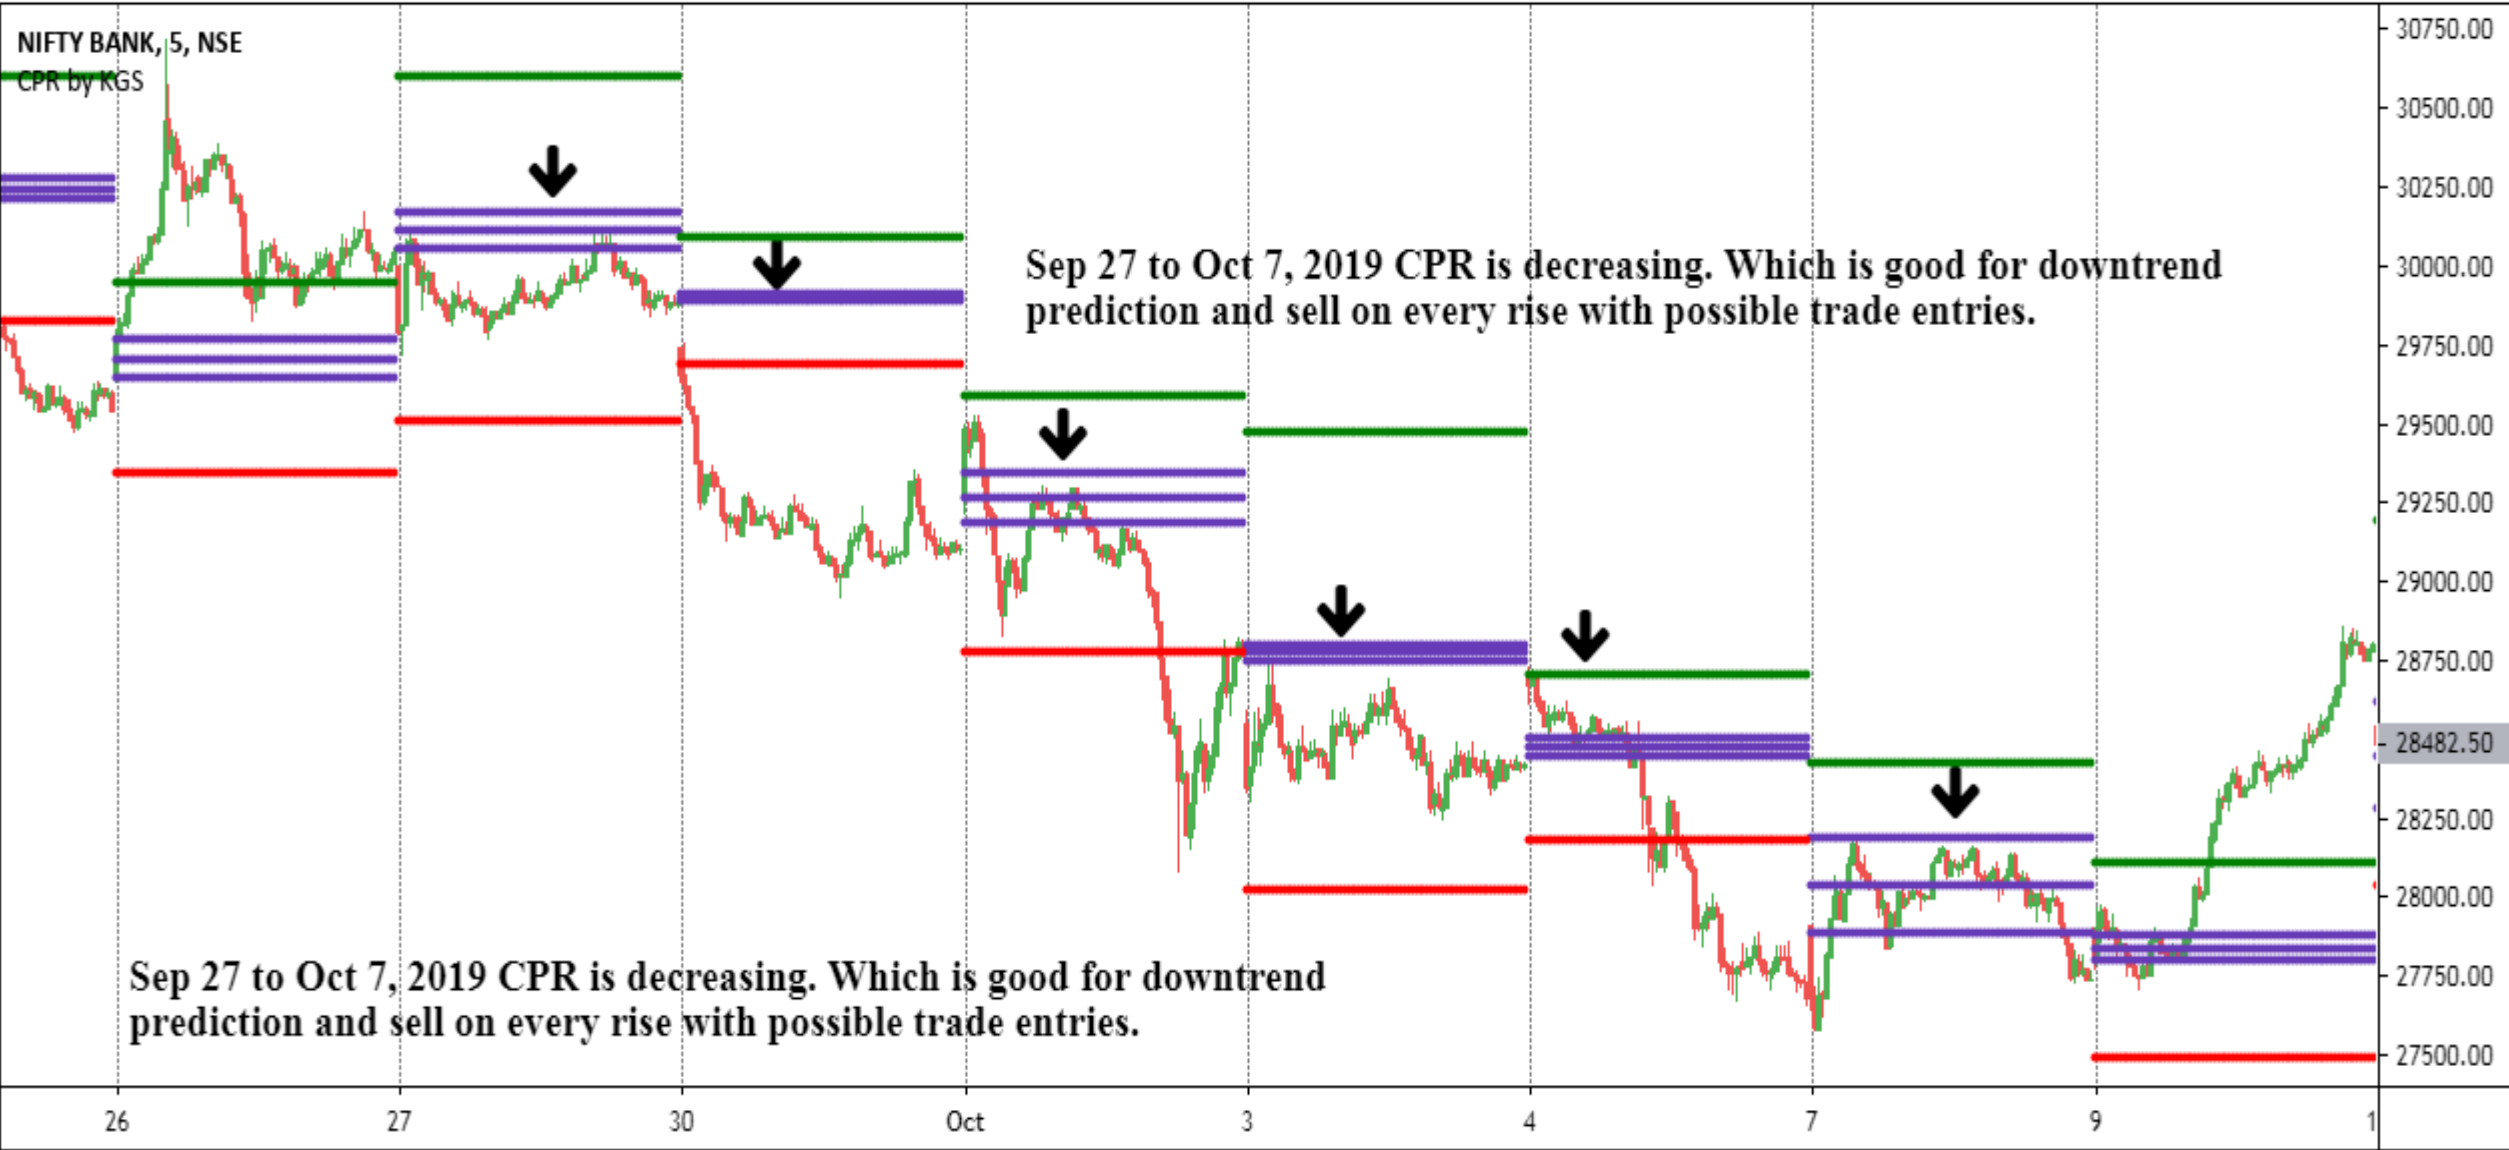

In a descending cpr, the overall trend is assumed to be bearish so our intention should be on the short side only.

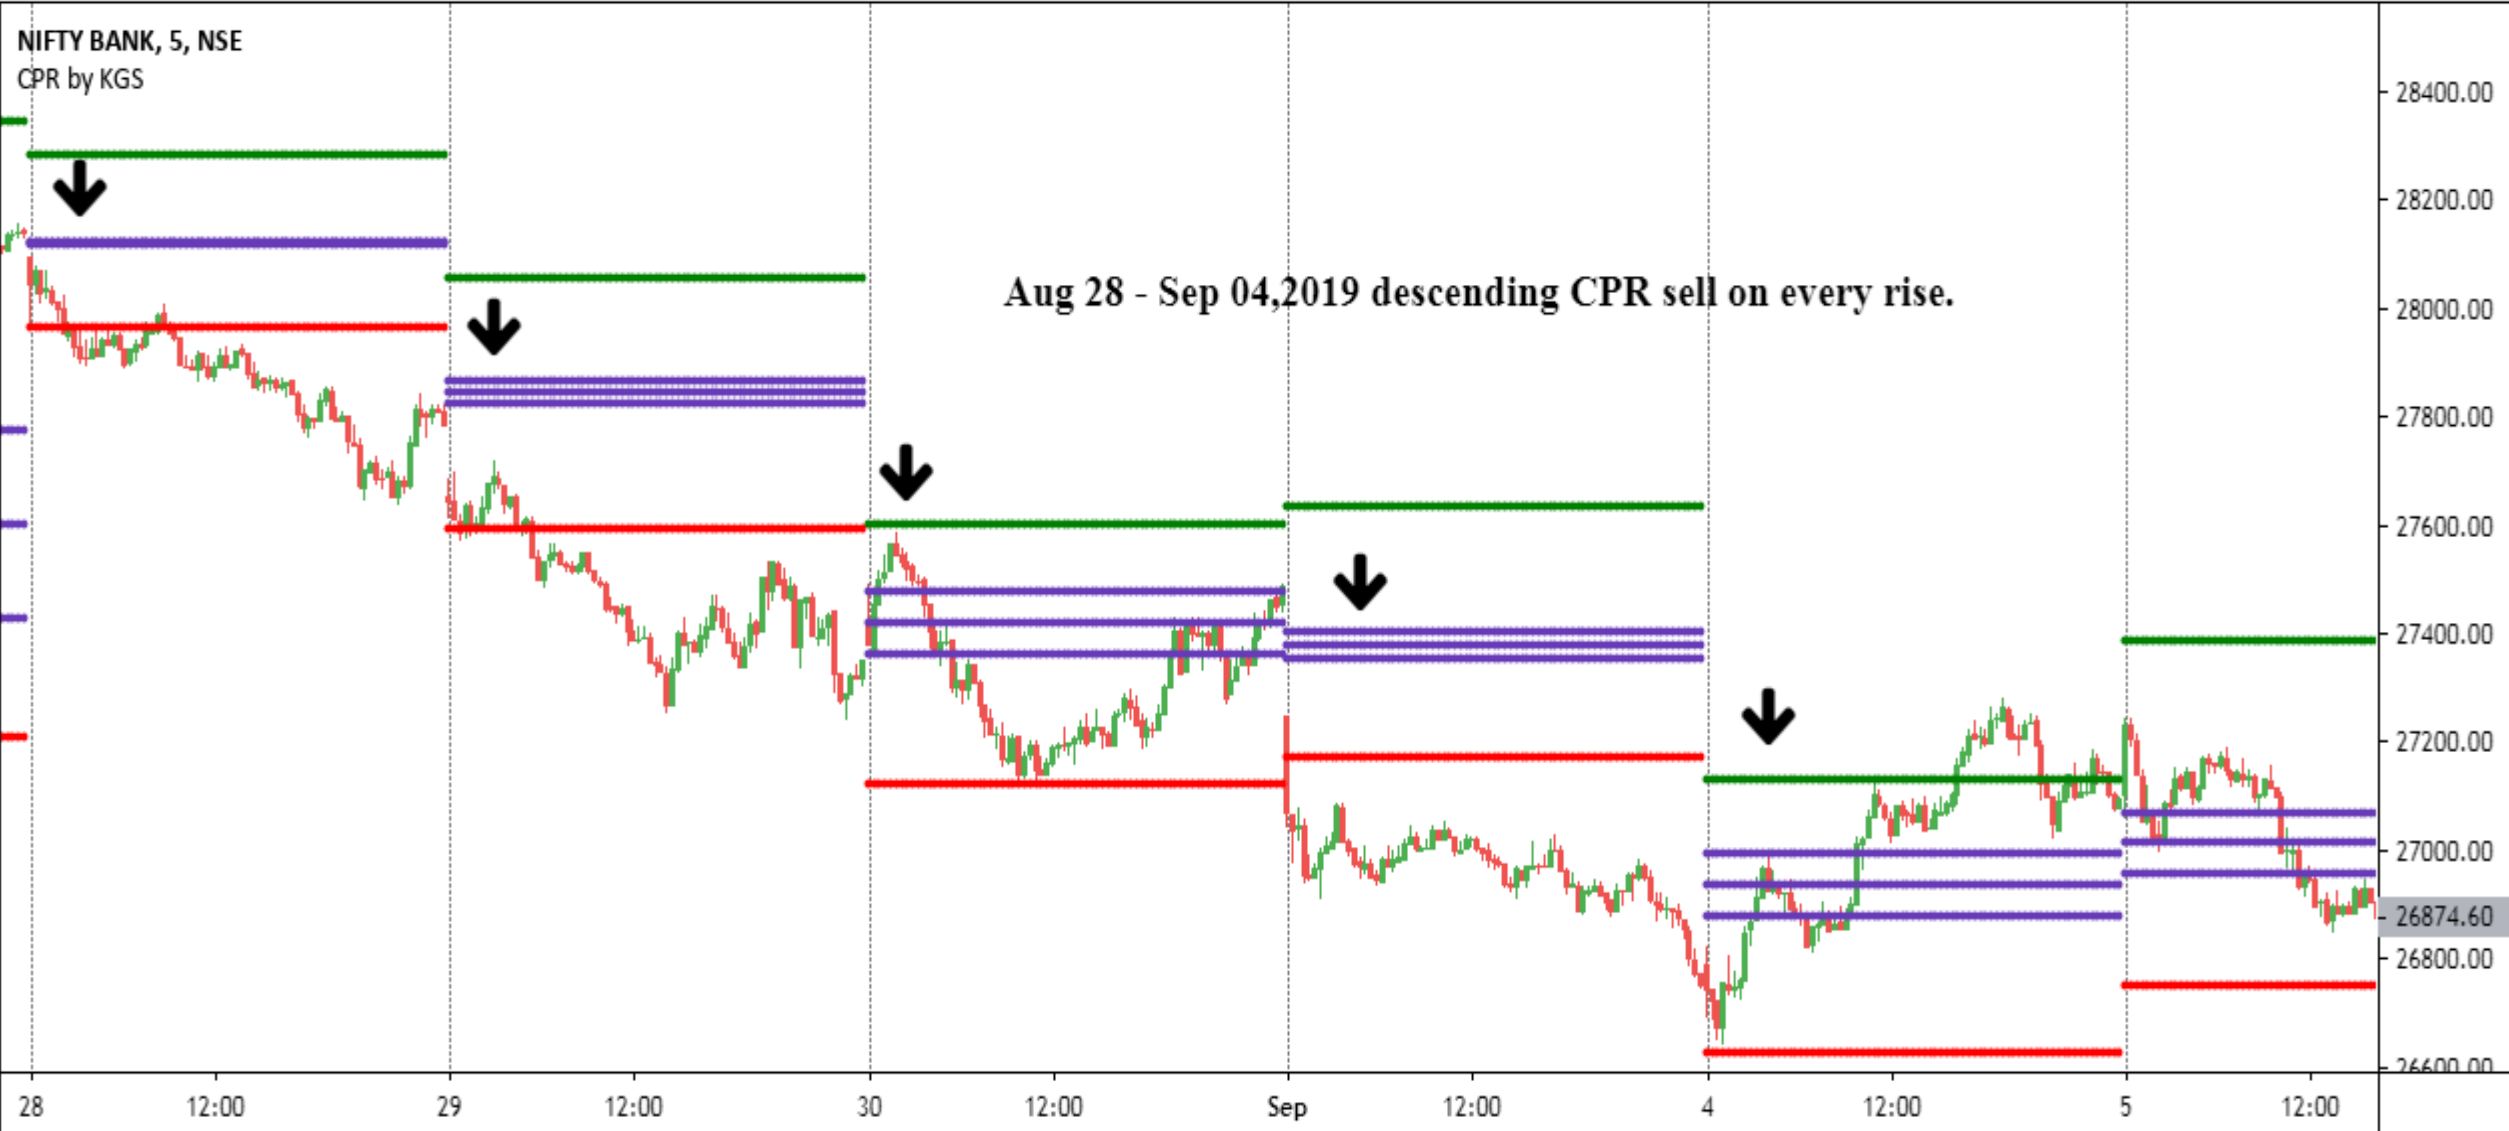

Market is expected to take a pull back or retracement at cpr and then the bear rally continues.

In this case PDH will not be broken, if it's broken and market close above PDH we can expect trend reversal.

OPEN TRICKS

DIRECT

Open above R1 and below S1

- If opening first three 5 minutes candles are above R1 or below S1 it will be a “TRENDING DAY” (**Green candles at R1 and Red candles at S1**)

REVERSAL

Open above R1 and below S1

- If opening first three 5 minutes candles are above R1 or below S1 it will immediately tends to reverse and get attracted to that day CPR levels. (**Red candles at R1 and Green candles at S1**)

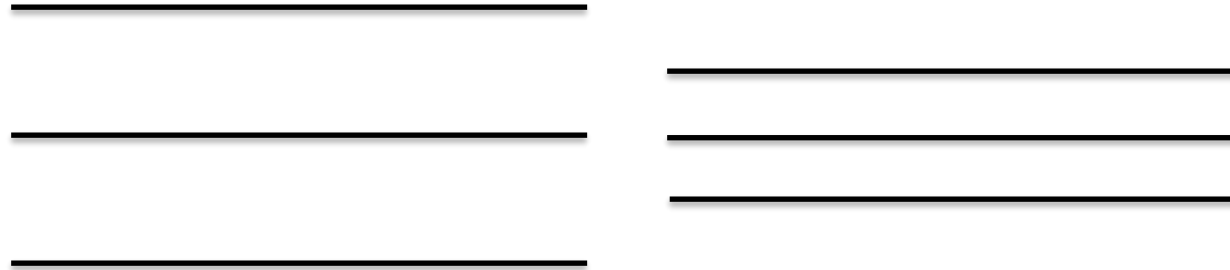

Inside CPR

DAY 1

DAY 2

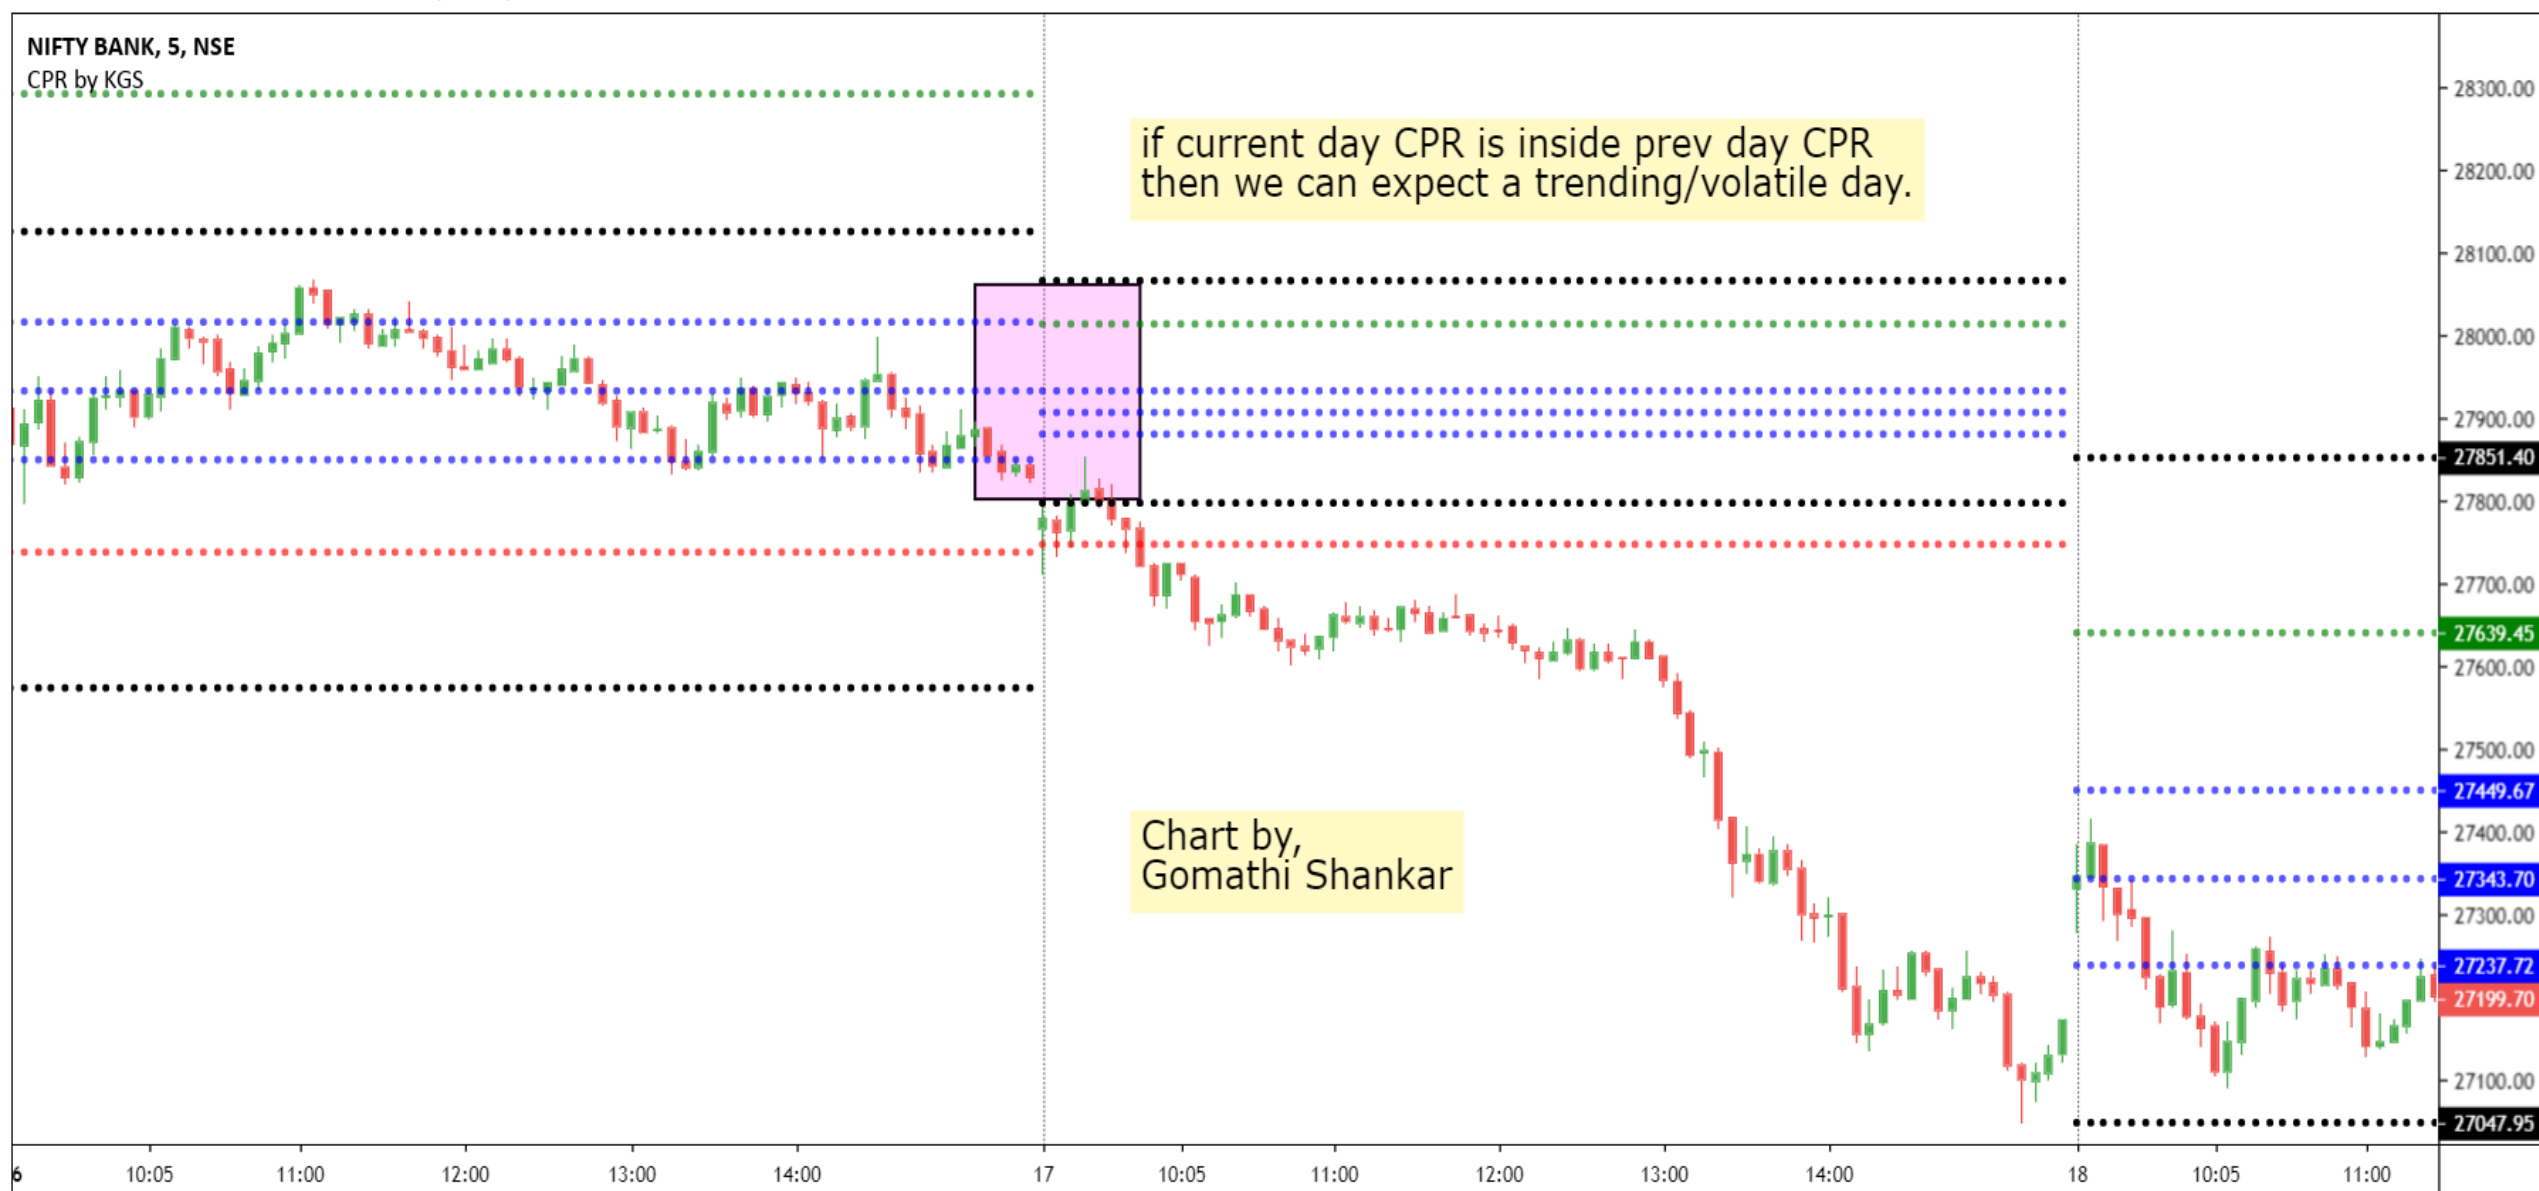

1. If day 2 CPR is inside day 1 CPR it's called as inside CPR.
2. Trending day expected.
3. RTP or HP-RTP expected.
4. If day 2 is not trending, day 3 will be a trending day.

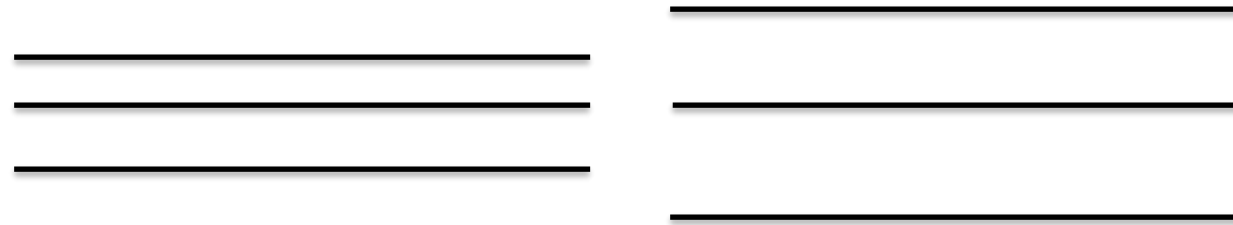

Outside CPR

DAY 1

DAY 2

1. If day 2 CPR is outside day 1 CPR it's called as outside CPR.
2. Sideways day expected
3. 20-50 flat/zig zag + 200 SMA hate candles expected.
4. If day 2 is having RTP/HP-RTP book small profits.

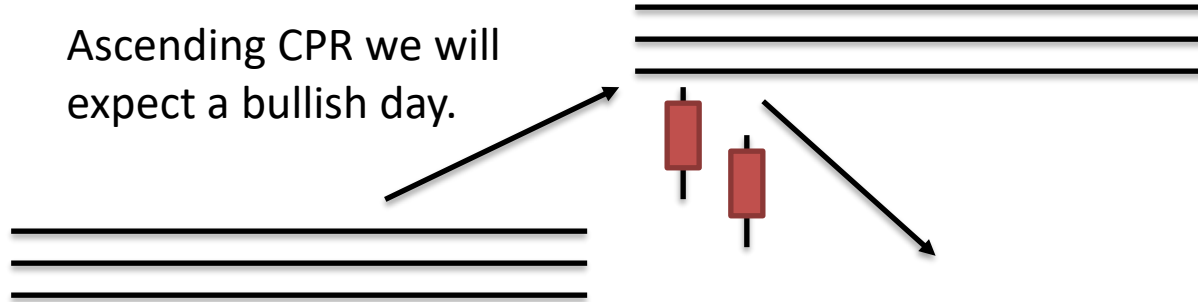

Trend reversal CPR

DAY 1

DAY 2

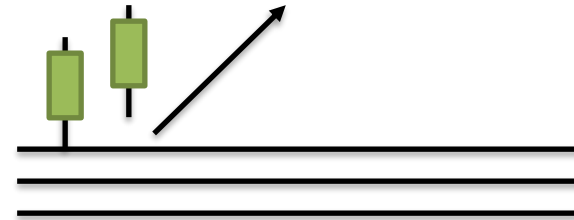

Ascending CPR we will expect a bullish day.

- But, day 2 candles will reject CPR and will go up or down changing the trend into bullish or bearish.
- RTP or HP-RTP can be expected

Descending CPR we will expect a bearish day.

NSE:BANKNIFTY, 5 19969.00 ▲ +355.10 (+1.81%) O:19988.15 H:19998.65 L:19891.75 C:19931.10

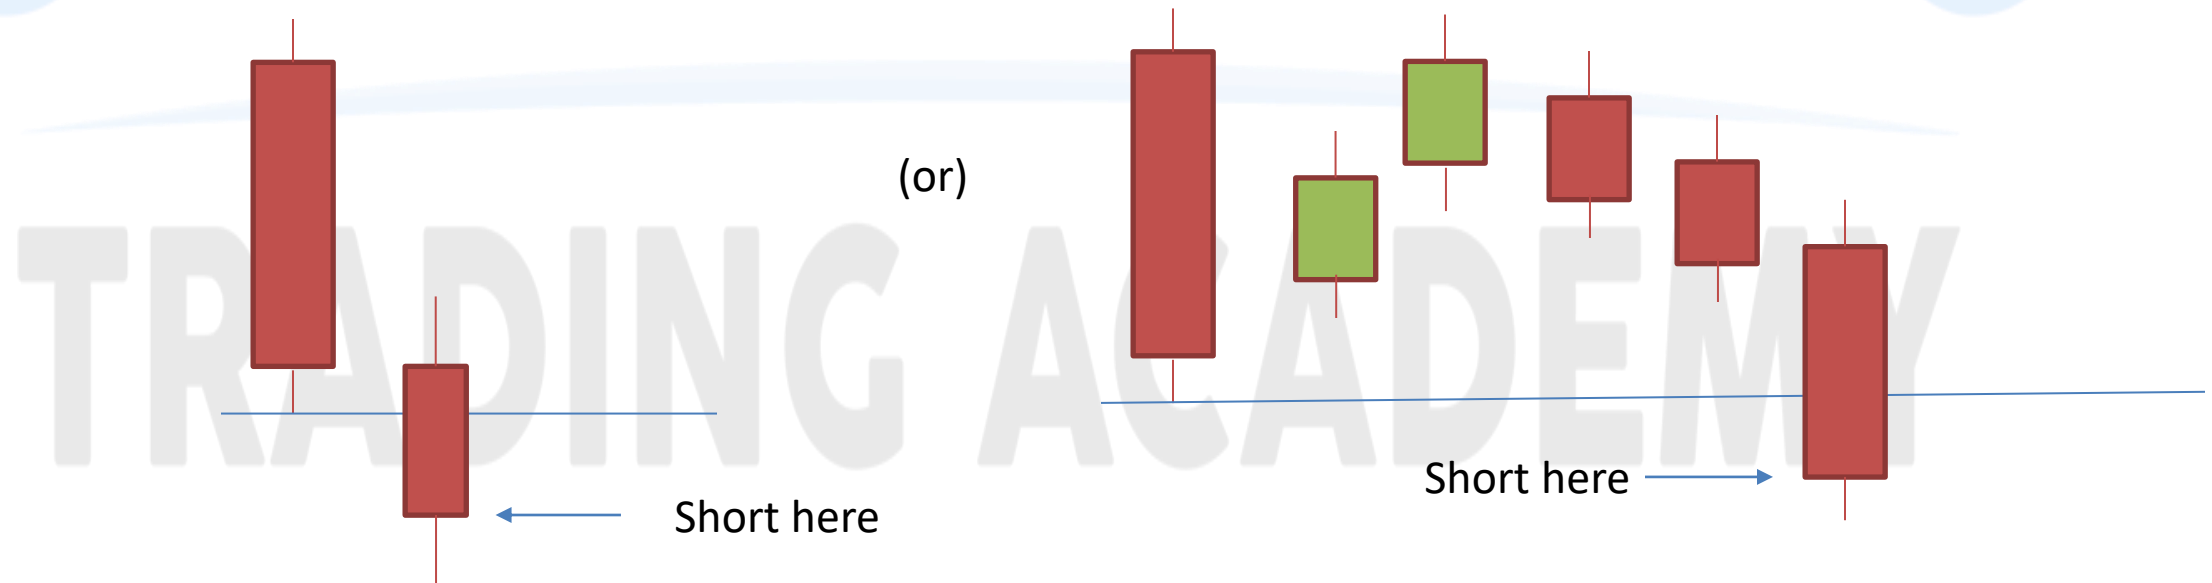

**Important candle psychology
(only for intraday 5 mins)**

REPETITIVE PATTERNS

TRADING ACADEMY

GIANT RED CANDLE

- The first candle of 5 mins chart is a giant red candle.
- This should be exactly at or near S1/PDL.
- This giant red candle low should be broken at anytime of the day and with another red candle close below this giant candle.
- Now, short position can be initiated at this closing red candle.
- Note: I have observed this personally in banknifty only for any other instruments kindly backtest once.

MARKET STUCK INSIDE R1/PDH & S1/PDL

- Whole day market stuck inside R1/PDH and S1/PDL.
- Sideways market is expected.
- Apply 200 sma hate candles tricks and dow theory.
- If there is no chance for 200 sma hate candles and dow theory then strictly avoid.

TRADING ACADEMY

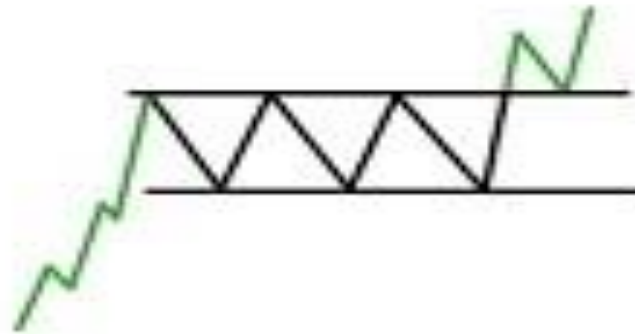

BIG BULL BREAK OUT (Bahubali or Hero candles)

Big bull break out is nothing but a sideways or range bound channel is broken upside by a single big bull candle.

It happens when there is no clear trend in the market and only sideways market occurs.

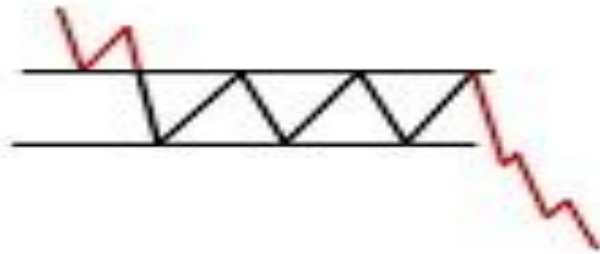

BIG BEAR BREAK OUT

(Bahubali or Hero candles)

Big bear break out is nothing but a sideways or range bound channel is broken downside by a single big bear candle.

It happens when there is no clear trend in the market and only sideways market occurs.

DOW THEORY

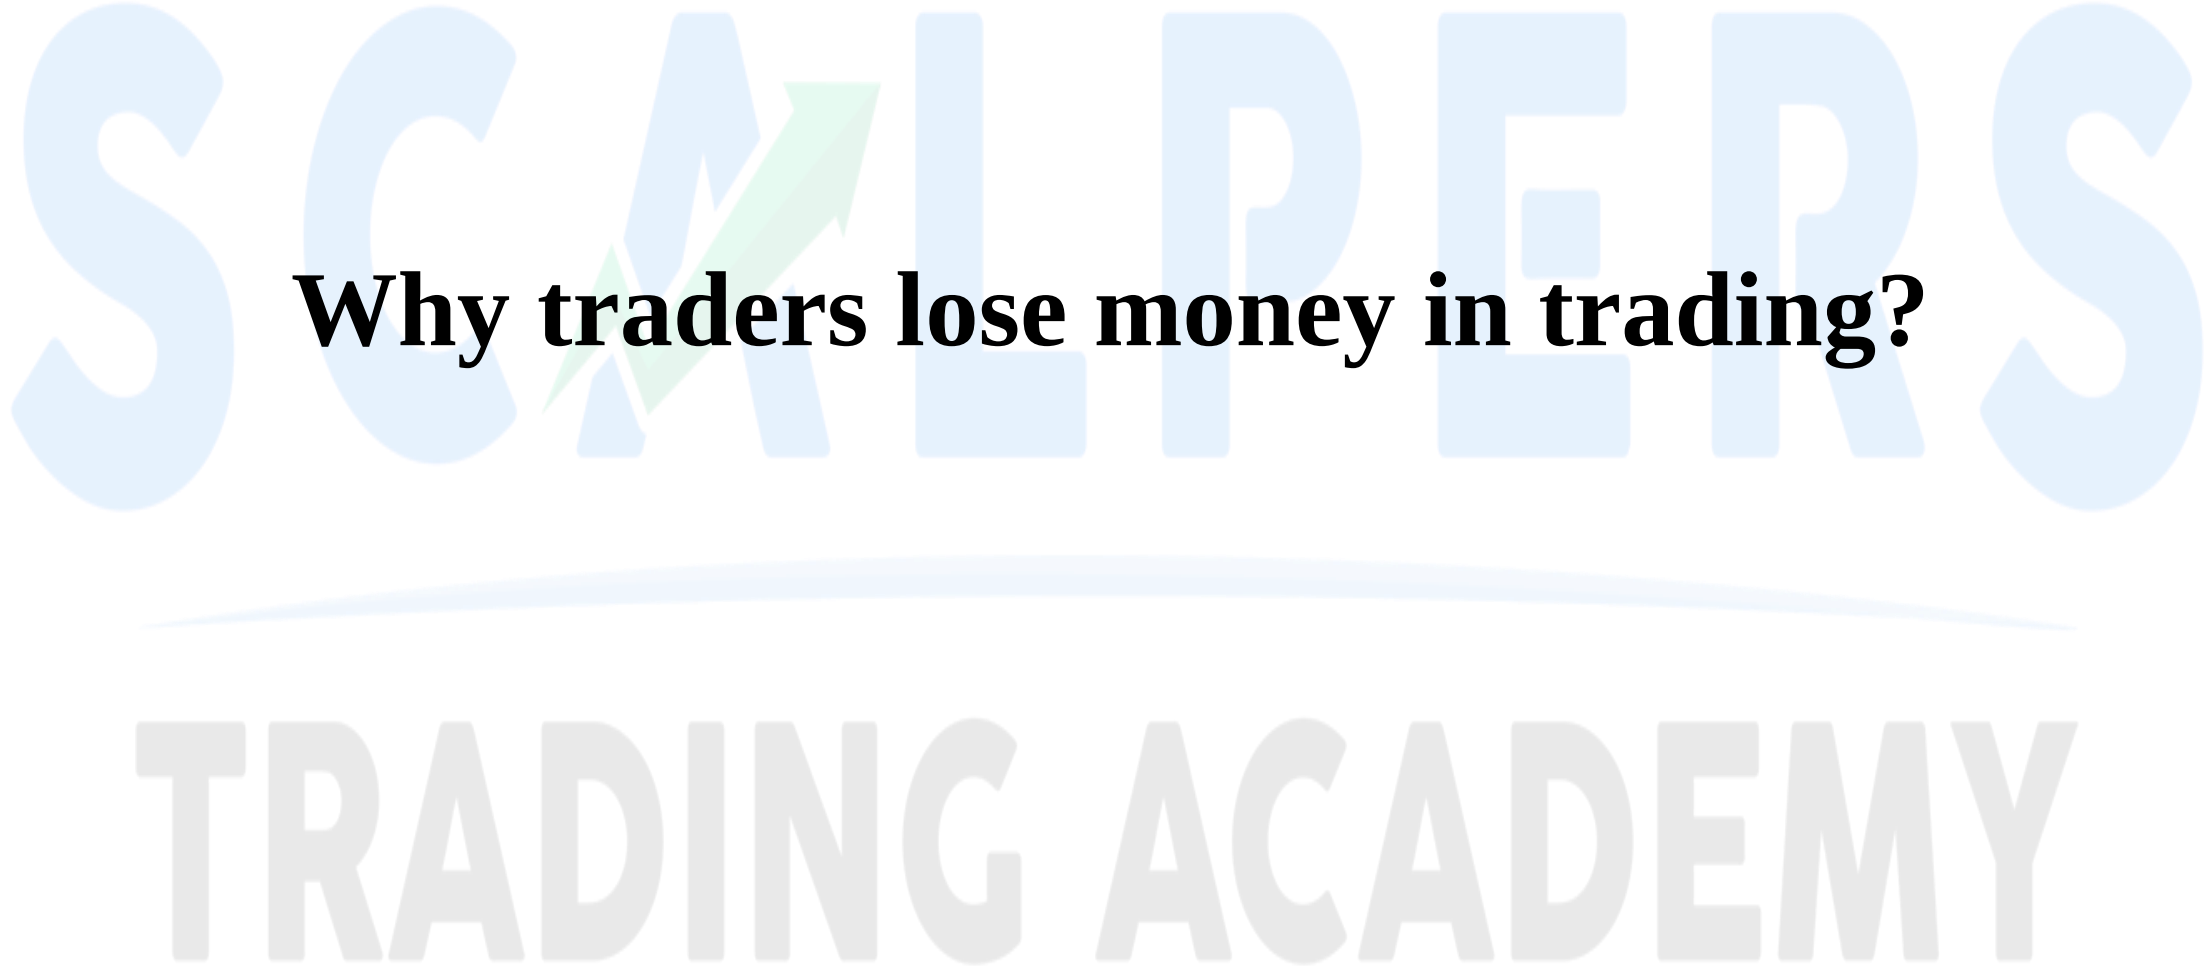

Stock selection methodologies.

For stock selection you can select any methodology but, you have to stick with our tricks for taking position.

Few commonly used stock selection methodologies:

- NR7
- Trendlines breakouts
- 2 days inside day
- Inside day
- Moving averages breakouts
- Narrow CPR

Why traders lose money in trading?

- **They don't know the trend.**

Now, you know how to identify the trend using SMA, CPR.

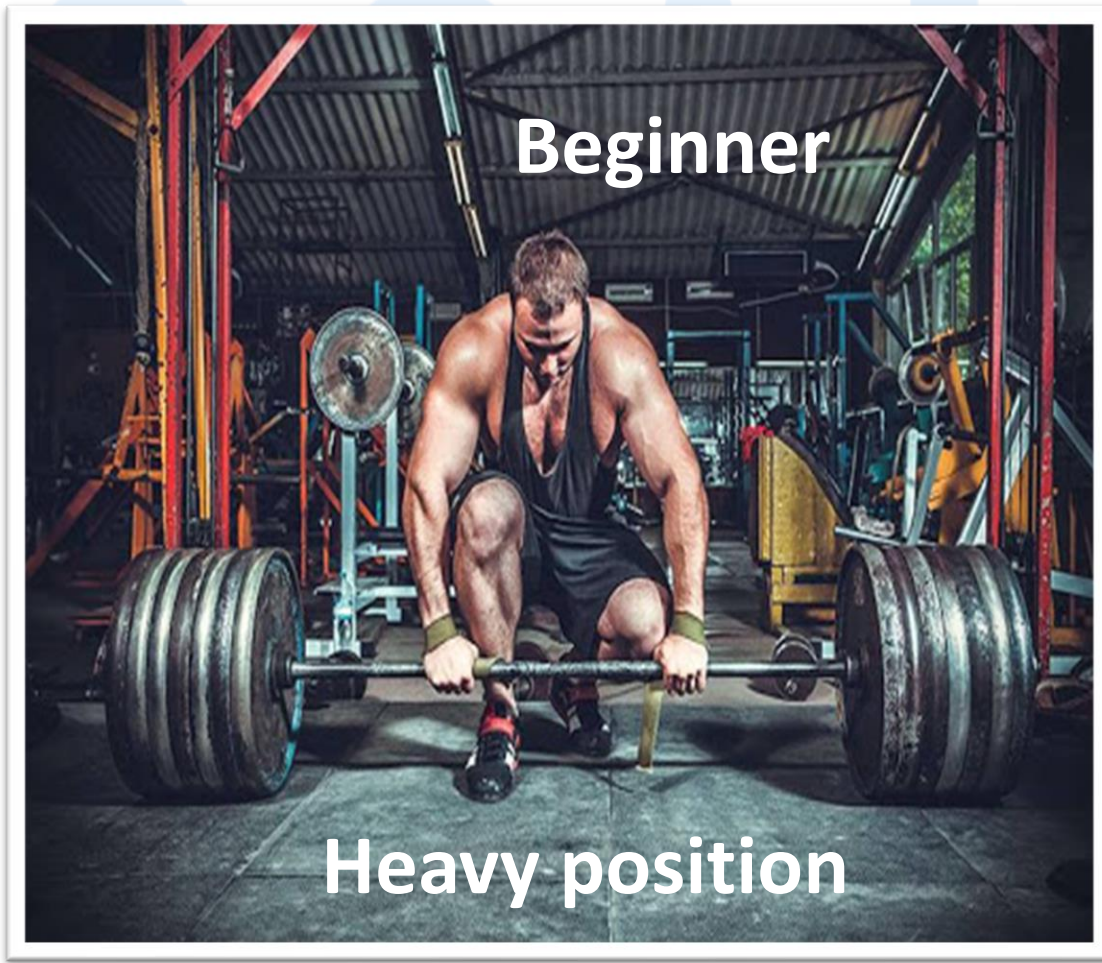

- **Multi tasking during trading.**

Most traders trade for money. They never consider trading as a business so they multi task while trading by watching 100 stocks in a single time, hearing music's, watching news channels, speaking/chatting through mobile phones.

- They don't know position sizing.

Taking heavy positions as if they're competing with warren buffet.

Risk management and Money management

Don't risk more than 2% per day. Take 2 trades per day with 1% risk each.

Capital : ₹ 1,00,000

Risk : 2% of capital which is ₹ 2,000 (2 trades ₹ 1,000/trade)

Position sizing:

Bank nifty stop loss : 25 points (your target should be minimum 25 pts)

Market lot : 20 quantities (1 lot)

Total risk in rupees : ₹ 500

Since, your risk is ₹ 1,000 you can place 1 more lot i.e. 2 lots only you should trade.

- Continues 3 days losses don't trade for 3 trading days. Go back to study mode, refresh your mind.
- When your total loss for the month becomes 10% stop trading for the entire month.
- If your in loss of 10% don't infuse further capital for the month.
- If your profitable take out your profits, keep the capital 1 L as it is.
- Maintaining a trade journal is compulsory, because trading is a business not a game.

Few words by your mentor:

- Imagine, You allowed to take only 12 trades a year. So, 1 trade per month. Now, will you take this trade?
- Think this again and again before taking any trade.
- Whether you win or lose, challenge yourself to maintain the starting capital at the end of the month.
- Take small profits initially build up confidence and positivity.
- Try playing test match with the markets, don't lose your wicket.

I wish you all success in your trading journey.

"I fear not the man who has practiced 10,000 kicks once, but I fear the man who has practiced one kick 10,000 times" by Bruce Lee.

"Take up one idea. Make that one idea your life; dream of it; think of it; live on that idea. Let the brain, the body, muscles, nerves, every part of your body be full of that idea, and just leave every other idea alone. This is the way to success, and this is the way great spiritual giants are produced." by Swami Vivekananda.

As a trading mentor, I advise you to practice my trading method again and again so that one day you can live your dream life of becoming a full time trader.

THANK YOU.!

"Together we grow, as a price action trading community"

- Gomathi Shankar (CPR by KGS)
