Acknowledgements

The process of writing a book is by necessity a solitary affair, but the content itself is inevitably a by-product of encounters with, and help from, many other people.

That has certainly been the case with this book, and I'm very grateful for those encounters, and for the insights, inspiration, and practical assistance many others have given me.

Needless to say, I owe a debt of gratitude to countless traders and astrologers past and present, who have inspired and encouraged me through their writing, their teaching, and their willingness to share their wisdom and experiences. While some of them are mentioned in the pages of this book, there are many, many more who deserve recognition. In some cases I've been especially fortunate in having my mentors and role models become my friends and colleagues as well, and I'm particularly grateful for these rewarding connections.

Software designers and computer programmers are the unsung heroes of modern research efforts, and their contributions are especially noteworthy in market astrology. Some of the ones who have helped develop the tools that have made this book possible include Carlos Almeida, Gary Christen, Alphee Lavoie, Bill Meridian, Sergei Tarassov, and Ray White.

I also want to acknowledge the huge contributions of the many hundreds of astrological, coaching, and consulting clients and students who have come to me during the past 40 years or so, mainly because they have so often given me opportunities to say to them the exact things that I most needed to hear myself. Special thanks are due to the ones who have Mercury retrograde in their natal horoscopes, but I'm grateful to all of you for trusting me with your secrets, your problems, and your self-esteem.

The months of preparation for this book included a lot of painstaking research and considerable amounts of number-crunching, and if it had all been left to me to do by myself, this book would never have been completed. My heartfelt thanks go to Doug Capehart for his invaluable assistance in that part of the work.

Above all I want to thank Patty Taylor for her passionate and persistent efforts in helping bring this book to completion. My Dear, your sharp eye in proofreading and your courageously candid comments on the text have done a lot to make this a better book. On top of that, your patient and forgiving willingness to put up with a husband who has all too often been hopelessly AWOL in the uncharted territory of writing a book has truly been amazing. Words can never fully express the depth of my gratitude and devotion to you.

Introduction:

The Astro-Trading Advantage

The study of planetary cycles and their correlation with market movements has been around for a long time, but for much of its history it has remained hidden in the shadows of the financial world. Market astrology was rarely talked about, and those who did actually discuss it did so in hushed tones, treating it as a closely-guarded secret that shouldn't be exposed to profane ears.

In many cases, those who talked about astrology in the markets at all did so with contempt and ridicule, making fun of it as preposterous superstition. Some others who were generally more open-minded still hesitated at using the term "astrology" in their discussions, preferring instead to talk about "astronomic phenomena" or "geocosmic influences" in the markets rather than to risk using words that might somehow lead to their being associated with psychics or charlatans.

But in many cases market astrology and astro-trading were deliberately preserved as carefully-protected secrets simply because the traders who benefited from astrology just weren't all that eager to share their methods with other people in the markets. They preferred to keep the hidden knowledge - and their personal trading profits - to themselves.

A century ago there were noteworthy traders whose success in the markets became legendary, but they too were rarely very open in explaining the planetary dynamics that lay behind their proprietary trading methods. There have also been many devoted students of astro-trading who have consciously chosen to be secretive about what they were doing, sometimes because of fearing embarrassment and sometimes because they were unsure about the ultimate value of their experimental methods. There have in fact been many traders who have glimpsed the potential of astrology in the markets and have gotten excited by the profitable possibilities that it offers, but who have never developed their understanding of astrological market methodologies well enough to apply them in their personal trading and then profit from the astro-trading advantage themselves.

But all that has radically changed during the past couple of decades. In many respects, the veil of secrecy has been lifted. Astrological trading methods have become much more widely accepted in the trading community as a whole, and have been featured in trading magazines and in books surveying contemporary approaches to market timing. More and more traders have been discovering the benefits of the astro-trading advantage in their own market experiences, and have successfully connected with still other traders who have shared their passion for planetary market timing, forming alliances and networking to support and encourage each others' investigations and trading insights.

Also during the past 25 years or so, the usefulness of astrology as a tool for market timing and forecasting has been extended enormously from the results of expanded research and from more disciplined back-testing. As improved tools and sharper thinking have enhanced the capabilities of mainstream trading, astro-trading has benefited, too. There have been remarkable advances in computerization, and historical market data has become much more accessible than it was in previous times. As a result it has become possible to test a larger variety of astro-trading hypotheses, and to quantify the results of those tests with increasing precision, contributing substantially to both the credibility and the creativity of market astrology as a maturing discipline.

Most important of all, however, is the fact that individual traders have increasingly understood their need for some kind of an edge that would help them compete effectively in a cutthroat market environment that is increasingly skewed by ever more sophisticated high-speed technologies. It is also an environment that is increasingly manipulated by forces which dwarf the resources of individual traders, and is dominated by the leverage of big market players controlling large blocks of trading capital. The astro-trading advantage offers individual traders a unique opportunity to rely on their personal knowledge and resourcefulness in ways that can help them contend with this complex and often challenging market environment as they strive to control their own financial destinies.

I've been fortunate to have been both a witness to and a participant in this growth of astro-trading into a more mature market discipline. I've been involved in astrological study and practice for more than four decades now, and more than three of those decades have been devoted almost exclusively to applying astrology to the markets. For nearly 25 years I've been publishing the *Financial Cycles Weekly* newsletter (currently available at [www. FinancialCyclesWeekly.com](http://www.FinancialCyclesWeekly.com)), and much of what I have learned about astro-trading has come through that experience.

About a dozen years ago I used what I had learned so far to create the ***Basic Stock Market Astrology Home Study Course***. Although some of the specific references in that course are a bit dated now, is still a viable resource. It is certainly worth investigating if you are a newcomer both to astrology and to active trading; you can find additional information at www.BasicMarketCourse.com.

Unlike the broad survey of information presented in the ***Basic Stock Market Astrology Home Study Course***, however, ***Mercury, Money and the Markets*** has a much narrower focus. Much of the past work in market astrology has focused either on long-term outer planet cycles or on the correlation of lunar dynamics with shorter-term market movements. While both of these approaches have given us extremely valuable information that can enhance our effectiveness in the markets, when we turn our attention to Mercury we are dealing with something remarkably different. Because it moves so rapidly, Mercury doesn't share the same characteristics exhibited by Jupiter, Saturn, and the other outer planets in influencing market mega-trends and long-term economic cycles. But at the other extreme, Mercury isn't exclusively a short-term, rapid-fire trading indicator, either (even though it has considerable strength in that capacity), since the patterns displayed by Mercury unfold more slowly than the cycles and phases of the Moon.

Mercury thus plays a unique role in helping us identify short-term trading opportunities, while at the same time it moves just slowly enough to make those opportunities potentially significant milestones in our trading experience. When we understand Mercury and its influence on market behavior, we can gain knowledge and insights that are particularly wellsuited to short-term, hit-and-run trading strategies that can give us both the power and the flexibility we need to be profitable and effective in today's complex trading environment.

While this book explores many practical examples of Mercury's role in market dynamics, ***Mercury, Money and the Markets*** is not intended to be simply a how-to book. Its purpose is to help you understand some of the complex and intriguing ways that Mercury impacts the markets, to get you excited about including Mercury dynamics in your own personal approach to astro-trading, and to provide you with a useful resource as you move forward with your own astro-trading research and design your own astro-trading systems.

With that in mind, this book makes a few assumptions which we should acknowledge at the outset. First of all, it assumes that there is in fact a correlation between the behavior of prices in the markets and planetary cycles and interactions. Our aim here is not to prove that such a correlation exists, nor to explain how and why that correlation functions. There have been many excellent studies that have more than adequately demonstrated that astrology really works, and that it works especially well when it is skillfully applied in active trading. You may want to turn to those studies if you are not already convinced that such a correlation is at work behind the scenes in day-to-day market activity. Once you have done so, return to these pages when you're ready to explore the astro-trading advantage for yourself.

This book also assumes that you are already aware of the basic rules and procedures for sensible trading in the markets, or that you are at least ready to learn and apply those rules before getting into the market yourself. Astro-trading, like any other kind of trading, involves considerable risk. When you put your money into the markets, you can lose all or part of that money.

While the tools and insights provided by astro-trading can give you a considerable advantage in the markets, it is not a magic bullet that effortlessly hits the bulls-eye in your trading target every time, or a

mystical shield that will automatically protect you from market losses. While the information in this book is based on extensive research and rigorous back testing, it does not guarantee that the techniques which have worked well in the past will infallibly do so in the future. In other words, you should under no circumstances trade with money that you cannot afford to lose, and you must be willing to assume personal responsibility for understanding the markets that you are trading and the full extent of the risks involved when you trade.

It's worth noting here as well that astro-trading is more than just simply applying astrological paradigms to the markets. To be truly effective, the astro-trader must also understand the fundamentals that lie beneath the stock or commodity being traded, with an eye to the external market forces, geopolitical and economic influences, and other factors which can influence the outcome of a trade, along with some basic knowledge of earnings, cash flow, supply and demand, and the other factors which go into a well-reasoned assessment of the potential for ongoing corporate profitability.

The competent astro-trader also needs to have a good core understanding of technical analysis - the assorted analytical tools and graphic techniques which can help us look at a chart of the historic price performance of a stock or commodity and draw some conclusions about future price trends and their sustainability. While you don't have to be an expert market technician to use astrology profitably in your trading, it's important that you don't ignore key technical indicators as you reach conclusions about what to trade and when to trade it.

Ideally, astro-trading is a seamless integration of fundamental analysis, technical analysis, and astrological insights. When we find sound fundamentals and a technical chart that indicates a potentially profitable trading opportunity, and then add the confirmation of back-tested astrological indicators to the mix, we can be much more confident in entering the markets and we can increase our likelihood of profiting through the astro-trading advantage.

In this book you will find many correlations between Mercury dynamics and important movements in the markets, which have been uncovered through extensive, systematic research and then back-tested to determine their reliability. While this information can be used to develop market forecasts with surprising accuracy, that is not the ultimate goal of this book. The assumption here is that getting real profits from your trading is more important to you than being right about what the markets are doing. If your personal approach to astro-trading includes disciplined money management of your trading capital and a realistic assessment of the risks that you are willing to accept, you will be far more likely to enjoy profitable results from your experiences in the markets.

Use the astrological insights about Mercury in this book to help you make clearer and more confident decisions about what you are trading and when you are trading it, but once you have entered a trade, I encourage you to be willing to surrender your need to be right about your analysis. Instead, pay close attention to what the movements of the market are actually telling you.

Above all, I hope that you will find ***Mercury, Money and the Markets*** an enjoyable reading experience. You'll encounter lots of pragmatic information here that you can apply to developing and refining your skills as an astro-trader. Along the way, there will also be some digressions and some tangential information that may at first seem to be irrelevant. But if you stay with the process, and have some fun as you do so, you will discover that you can integrate all of the diverse material in this book into a dynamic comprehension of the unique role that Mercury plays in the markets. You will also be well on your way to enjoying the full benefits of the astro-trading advantage for yourself.

Mercury in Myth and the Esoteric Tradition

As we look at the role of Mercury in the markets, we are of course primarily concerned with the practical results we can get in trading and in investing.

That's one of the great benefits of financial astrology. It gives us endless opportunities to test astrological hypotheses and to see in unequivocal, real-world terms what kinds of correlations actually exist between cosmic structures and ancient symbols and the day-to-day flow of contemporary human activities.

The markets are particularly unforgiving in this regard. When we look each day at price fluctuations, we have an opportunity to determine in no uncertain terms whether we have been successful or unsuccessful, whether our trades have brought us wins or losses, and we can keep score with precise numerical accuracy.

Above all, then, financial astrology and astro-trading demand a level of accountability that we rarely find in any other applications of the astrological craft.

But even though most of our work in astro-trading obliges us to focus on concrete results, we can also gain a great deal from the kind of richness that we find in astrological symbolism, and in the esoteric lore that provides the foundation for the astrological wisdom of the ages. When we get a glimpse of the cosmic dimensions of astrology, and when we begin to comprehend the incredible scope of astrological traditions over the passing centuries, it is a truly humbling experience.

That kind of humility is a prerequisite for real learning, and it is a virtue that is all too absent in market behavior. But when the vastness of our astrological heritage leaves us full of wonder, in that humbled and awe-stricken state we are most likely to be at our best in the trading environment.

It is, after all, when we are willing to admit our ignorance as we impartially observe the fluctuations of market activity that we can the greatest opportunities for trading success, rather than in those all too frequent occasions when we are somehow convinced that we actually know what's going on, and insist on using that blind conviction in our vain attempts to tell the market what to do. Mythology gives us an intuitive, right-brain experience that provides a counterpoint to the left-brain analysis we use so much in the markets. When we integrate the two into whole-brain thinking, we become much more effective as traders.

The markets truly have a mind of their own, and so it is even more appropriate that we examine Mercury and the markets to get a core understanding of the ebb and flow of information that creates the divergences and opportunities of the trading environment. And with Mercury we get an added bonus—a unique grounding in spiritual tradition and esoteric lore that ultimately serves us well in maintaining emotional balance and appropriate intellectual perspective as we seek to understand the vagaries of the markets, and to identify the most salient opportunities that perpetually await us in the never-ending stream of market data.

Before we examine some of the characteristics of Mercury in an astrological context and begin our exploration of the unusual connections between Mercury and the markets, it's thus worthwhile to recall the mythological connections that so enrich the literature of Mercurial lore. Mercury, of course, was the name that the Romans gave to the Messenger of the Gods, a well-known figure even in modern iconography, with his winged feet helping to speed him on his way as he delivers good news, bad news, and unexpected tidings to places near and far. His image remains a familiar one, at least when we visit a florist shop with the intention of having flowers delivered for some special occasion.

But Mercury in the Roman pantheon was part of a wholesale appropriation of deities from the Greek culture, and it was in that context that Mercury was known as Hermes. This Greek antecedent to Mercury is an intriguing figure in mythology, to say the least.

Hermes was the son of Maia, a nymph who lived in a cave and who had become impregnated during a tryst with Zeus, the king of the gods. Hermes was also the brother of Apollo. The Greek story tells us that on the very first day of his life, the infant Hermes decided to steal Apollo's oxen.

In order to escape detection, Hermes got some giant sandals which he tied to the feet of the oxen, with the toes of the sandals pointing backwards. Then, when Hermes led the oxen away, the footprints showed a trail heading in the opposite direction. After he had completed this stunt, Hermes finished the day back in his crib, smiling innocently at his mother.

Apollo, however, soon figured out what had happened to his cattle, and dragged the infant Hermes with him to appear before their father Zeus. As Hermes eventually confessed to his crime, Zeus replaced his initial anger with bemused curiosity, which gradually turned to outright admiration as he learned about the ingenious way that Hermes had disguised his theft. Zeus then gave Hermes a variety of tasks to perform, designed both as penance and as an indoctrination into some of the rudimentary guidelines of civilized society.

Mercury's role as a trickster is an important one, especially in the realm of astro-trading. In this role he is a god and expresses godlike qualities; yet he is not a god at all, acting in all-too-human ways as he exemplifies the fool who is in reality very wise. Like Mercury, the markets have a mind of their own, and we can be severely deceived if we think we can predict their every movement.

As the trickster, Mercury rebels against authority, poking fun at overly serious people and situations, reminding us to step back and reevaluate our most cherished assumptions. In his ability to invent intricate plans and convoluted schemes (which may or may not actually work), his behavior is a reflection of the penchant many traders have for devising complex methods of market analysis, becoming their own worst enemies in the process. When we remain cognizant of Mercury as the trickster, however, we can raise important questions instead of accepting things blindly as we engage with the markets.

It was Zeus who designated Hermes as the Messenger of the Gods. In that role his responsibilities included insuring the rights and safety of travelers, promoting commerce, and assisting in negotiations and treaties. As a guardian of thresholds, Hermes protected sacred spaces, keeping the unworthy out. It was he who allowed passages between the visible and invisible worlds.

The special staff that Zeus gave Hermes was crowned with snakes, and it had the power to cast spells, induce sleep, and aid Hermes in interpreting dreams. This caduceus could also make Hermes invisible, and it had the power to heal the sick (thus its traditional association with the healing arts and medical professions).

In other parts of the Greek mythology, the role of Hermes is decidedly ambiguous. He is both the archetypal thief himself and the opponent of thievery by stealth (as opposed to open robbery by force, which was more or less a fact of life in the ancient world). In essence, then, he was both outlaw and enforcer of the law; a nemesis of the cunning who calls upon his own extraordinary talents at subterfuge in maintaining the forward progress of social interaction.

But the mythological role of Mercury is not limited to the Roman and Greek contexts. The Greeks had active connections with Egypt, and Hermes became part of the Egyptian pantheon as well. It was as Hermes Trismegistus, "Hermes the Triple-Blessed", that he was embodied by Thoth, an officer of the divinely-privileged Egyptian royal court who appeared in a variety of animal forms. Typically Thoth was depicted as a stork, but sometimes he appeared as a jackal or a baboon.

Regardless of his specific appearance, however, Thoth as the Egyptian version of Hermes is much less a prankster and much more an agent of divine justice, social order, and earthly goodwill. He was, above all, an embodiment of a sacred presence in human activities, and an exponent of the underlying truth which transcends the diversity of material forms.

According to some esoteric traditions, Thoth was the first to cognize and systematize the symbolic

system that became the basis for the Major Arcana in tarot cards. These symbols have enormous archetypal power and were, as Ishmael Reed suggests in his 1972 novel *Mumbo Jumbo*, an attempt to codify the sacred fertility dance rites of the cult of Osiris. As Reed depicts it, Thoth told Osiris "that if Osiris would execute these dance steps for Thoth, he would illustrate them and then Osirian priests could determine what god or spirit possessed them as well as learn how to make these gods and spirits depart." And thus "Guides were initiated into the Book of Thoth, the 1st anthology written by the 1st choreographer."

It was also Thoth, in his Alexandrian Greek alter-identity Hermes Trismegistus, who was acknowledged as the author of the mysterious Emerald Tablet, which is doubtless the most pivotal ur-text of the ancient esoteric tradition. The Emerald Tablet was the foundation for centuries of alchemical lore, and it provides the philosophical perspective that underlies astrological work as well. Because it contains the core notion of correspondences between the macrocosm and the microcosm, it's also an important antecedent for us as astro-traders, not only because of our efforts to correlate planetary cycles to market movements, but also because it reminds us to look for the fractal relationships of market activities in different time frames, whether we are examining long-term monthly price charts or are trading one-minute price bars in a rapidly moving contract.

The Emerald Tablet itself is a remarkably brief document, so it's worth reproducing here in its entirety. It's useful as a focal point for meditation and reflection as we contemplate the mysteries of the markets, and it gives us a glimpse of the real scope of the power we are confronting when look at the role of Mercury.

The Emerald Tablet

It is Truth; Truth without lies; certain Truth—
That which is above is like that which is below;
And that which is below is like that which is above
To accomplish the miracles of the One Thing.

As all things came into being by the meditation of one,
So all things arose from this One Thing,
By a single act of creative adaptation.

Its father is the Sun, its mother is the Moon.
It was carried in the womb of the wind, and the earth is its nurse.
It is the father of all wonderful works in the universe.
Its power is perfect.

If it is cast on earth it will divide the element of earth from the element of fire,
Separating the subtle from the gross with gentle heat and one-pointed attention.
In its great wisdom it ascends gently from earth to heaven.
Again it descends to earth, then unites in itself
The force from things above to the force from things below.

Thus you shall call the glorious light of the whole world your own.
All obscurity and darkness will fall away from you.

This is the mightiest of all mighty powers,
For it will overcome every subtle thing
And has the power to penetrate every solid substance.

Thus was the world created.

For this reason I am called Hermes the Thrice-Greatest,
One in essence but Three in aspect,
For I possess three parts of the wisdom of the whole universe.

That which I have to say about the work of the Sun is completed.

This rendition of the Emerald Tablet, which I first published in *The Esoteric Review* newsletter in May, 1983, is an attempt to capture much of the essential poetry and mystery of earlier translations while at the same time providing a focus on the text as a guide to the validity of the insights that can only come through the practical alchemy of meditative experience and spiritual discipline. As such, it sometimes sacrifices more precise language in favor of aesthetics— for example, "that which is above" and "that which is below" would perhaps be more accurately translated as "that which is superior" and "that which is inferior", but in our current politically-correct environment those terms have connotations which tend to distract attention away from the true importance of the text.

Even so, the Emerald Tablet is not only a piece of inspired poetry and philosophy, and a means of connecting with the archetypal understandings of the ancient world. If it is also something which can have particular significance for us as astro-traders, especially in our examination of the specific ways that Mercury functions in the markets.

The attribution of the text provides our first clue to its understanding. While it was a common practice in the ancient world to attribute various writings to venerated historical figures and or even to deities, the fact that the Emerald Tablet is attributed to Hermes is especially significant in this case. The Emerald Tablet is not just something that was supposedly written by Hermes, it was also actually about Hermes himself, both as a personage and as a planet. We can thus expect to gain valuable insights into hermetic matters like alchemy and astrology when we ponder this document, but we can also expect it to have some correlation with the observable cycles of the planet Mercury itself.

The portions of the text which refer to "that which is above" and "that which is below" are particularly noteworthy in this regard, since Mercury makes two geocentric conjunctions with the Sun as a part of its regular orbital cycle. These are the superior conjunction, when Mercury is on the far side of the Sun as seen from the Earth's perspective, but is aligned with the Sun in the same degree of the zodiac; and the alignment of the Sun and Mercury when Mercury is between the Earth and the Sun, reaching its closest to Earth as it again ruler lines up with the Sun in the same degree of the zodiac (the inferior conjunction).

The superior conjunction of the Sun with Mercury occurs only when Mercury is in direct motion, and the inferior conjunction always takes place while Mercury is retrograde.

The information in the Emerald Tablet can thus give us more than just philosophical insights to ponder. It is also a commentary on physical planetary cycles and alignments, and as such it provides us with specific guidance in our efforts to understand the dynamic potential hidden in a set of observable and predictable planetary phenomena.

The Emerald Tablet is also important for us as astro-traders because it is about the process of change. The author of the document is not just Hermes, but Hermes Trismegistus, the triple-blessed. While triplicities are significant factors in many of the world's cultural and spiritual traditions, this designation of Hermes is more than just an idle affirmation of a cosmic triune nature. Hermes was unique in the ancient pantheon because he could successfully traverse all three worlds - the abode of the gods on Mount Olympus, the underworld of lost souls and hidden things, and the realm of human beings, that zone which is perpetually caught in the balance between the divine and the daemonic. This extraordinary ability to function comfortably in all three worlds was an essential part of Mercury's role as messenger of the gods. But it also gave him a unique part to play as the gatekeeper, as the Guardian of Thresholds in that nebulous realm between the worlds, where one state of being is transformed into another form of reality.

It was, of course, this capacity for transformation embodied by Mercury that made the Emerald Tablet so appealing to the ancient alchemists. As they labored diligently in their efforts to transmute lead into gold, they also sought to transform their own base and unrefined personal characteristics into more perfect expressions of the divine essence.

In doing so, they embraced one of the core paradoxes of what it means to be human - the perpetual

struggle to reconcile lowly instincts and animalistic tendencies with the nagging realization that we are called to higher things, that our destiny is to imbue our earthly existence with lofty ideals and ecstatic inspirations. In fact, this is at the root of the word "human" itself; the etymology of the word combines the root word found in "humus", the fertile soil of the earth, with the notion of "manas", the Indo-European term for mind. With Mercury, then, we have an embodiment of our unique mission as sentient humans - to use our creative intelligence consciously to transform the earth. When we deal with Mercury we come face-to-face with our own essential role as agents of change and transformation.

That association with the hermetic tradition with transformation is a critical factor in our encounter with the markets as well. As astro-traders we are primarily concerned with changes in trend, those occasions when a shift in market direction offer us specific opportunities to realign our thinking and our capital in more profitable ways. The ability to move freely between the worlds, and to embrace the divergences and transformations in mass behavior, are what astro-trading is all about.

Mercury is also associated with the activity of trading by virtue of his connection with commerce and with the transference of information and value. This is above all an active and dynamic process. Since Mercury is the Messenger of the Gods, when we engage in the markets we can gain the greatest benefit by tuning in to the information at hand, repeatedly asking ourselves "What's the real message here? What is the market telling us now about its own current temperament, about the intentions of other traders, and about the unique opportunities we are being offered for our own trading?"

The Emerald Tablet is often erroneously summarized as a simple statement that "as above, so below" is the governing principle of universal will. In actuality, however, the Emerald Tablet makes it clear that the flow of creative intelligence goes both ways - "that which is above is like that which is below, and that which is below is like that which is above." It does not describe a system in which an omnipotent divine force relentlessly imposes its will upon human affairs. Instead, it emphasizes the fact that creativity, communication, and adaptation emanate as much from Earth and from human affairs as they do from the celestial realms.

As astro-traders, when we align ourselves with these ancient hermetic principles and when we engage with Mercury's influence in the markets, we are participating in a primordial tradition of that gives us a very modern advantage in discovering more profitable trading and more profound rewards from our encounter with the markets. While our main focus is on the planetary correlations with the phenomena we can observe and the data we can back-test, if we add an awareness of the esoteric implications of our actions in the markets to our trading toolbox we can combine an intuitive, right-brain dimension with our left-brain analytical skills, creating an extraordinarily powerful whole-brain approach to our trading activity. When we come to the markets with fully integrated whole-brain awareness, we can't help but spontaneously identify remarkable trading opportunities that we might otherwise have missed. And, as we shall see later in this book, having some familiarity with Mercury myths and traditions can guide us toward specific trading strategies as well.

Trading can be an extremely tricky and even deceptive endeavor, and Mercury in his trickster role won't let us forget that fact. But Mercury also encourages the kind of precise thinking and rigorous record-keeping that can help us manage our trades and trading capital more effectively, and in that capacity Mercury guides and directs us toward more consistent trading performance. But it is through Mercury's role as an agent of change and as a guardian of transformational thresholds that we are given the biggest opportunities for experiences that can alter the course of our lives, taking us closer to a completely empowered expression of who we really are. With that kind of rarefied self-knowledge we can reach greater heights of personal fulfillment, and we can become more effective as astro-traders, too.

The Trading Triad

When we step back from the world of myth and move into the realm of modern astrotrading, we immediately become concerned with pragmatic market matters, with precise measurements, and with practical ways of preserving our capital as we maximize our profits. But if we are wise, we don't completely abandon Mercury myths and esoteric paradigms as we consider the trading opportunities that the markets are offering us now. Instead we integrate our right-brain esoteric awareness with our left-brain analysis to use the full power of whole-brain thinking in our trading.

If we pause to reflect on Mercury archetypes from ancient times, we can often find guidance that is surprisingly relevant to our contemporary circumstances, and discover parallels between the tasks performed by the Messenger of the Gods and our own challenges as we go into action in today's sophisticated market environment.

Like Hermes, for example, our role as astro-traders is to move effortlessly between the worlds, transcending thresholds. Market movements are essentially all about thresholds.

Almost before our eyes, a profitable trading position crosses an invisible threshold and suddenly becomes a loss.

A stock breaks out of a congested trading pattern and then gaps upward into a new trading range, crossing a threshold and creating an important technical signal.

An options play experiences the inexorable effects of time decay and begins to slide rapidly toward worthlessness. At some point a threshold is crossed, and it's time to abandon the trade.

Our task as astro-traders is to become adept at anticipating and negotiating thresholds, so that we can match our actions to the shifting moods of the markets and gain the rewards that come with accurate analysis, reliable intuition, precise communication, and speedy engagement in transactions. Comprehending and utilizing thresholds in the markets and in ourselves is unfortunately a skill which many traders miss completely, whether or not they are cognizant of Mercury myths and whether or not they try to apply astrological principles to their trading.

In many cases, the real problem is one of limited perspective. Effective trading is more than just buying and selling. The markets bring us lots of surprises and complexities, and real mastery of the trading process requires a willingness to broaden our perspectives and to develop our skills in three equally important areas.

We refer to those three areas of mastery as the Trading Triad. Each of them requires knowledge, insight, and disciplined practice, and if any of the three are missing from our engagement with the markets we are much more likely to be disappointed with the results we get from our trading. Whether we imagine the Trading Triad as an equilateral triangle or visualize it as a three-legged stool, we need to give attention to all three components, since all three of them are mutually interdependent. At the most basic level, we can refer to them simply as the Market, the Trade, and the Trader.

The Market

If we are going to trade effectively, we must have some understanding of what the Market as a whole is doing. We try to reach that understanding by observing market data and by asking questions: "What is the current mood and temperament of the market that we are trading? What are its characteristic dynamics, and what external and internal factors are influencing them? Is there a discernible market trend, and if so, how likely is it to change?"

Whether we arrive at our answers through exposure to the daily news, through the maze of recommendations and advice offered by market pundits, or through an awareness of the rhythmic influences of planetary cycles, our goal is to arrive at a reasonable understanding (or at least a well-informed opinion) about the current nature of the market as a whole.

As we prepare to enter a trade, it's important that we come to terms with the Market component of the

Trading Triad for one essential reason - the biggest factor in the price movement of any individual stock is the movement and trend of the market on a larger scale. The old trading adage tells us that a rising tide floats all boats, and that notion has been substantiated by research summarized in a 1964 Ph.D. dissertation by Benjamin F. King, Jr. at the University of Chicago, which showed that 70% of the tradable price action in an individual equity can be attributed to the predominant market trend. If we decide to trade against that trend we take on more risk than we need to, and unfortunately that greater risk doesn't always bring us greater rewards. But if we consistently include this critical part of the Trading Triad in our approach to the market opportunities that present themselves, we can be far more confident that we will ultimately experience trading success.

The Trade

Once we are satisfied with our analysis of the market as a whole, we can move to the second component of the Trading Triad, which is an analysis of the specific Trade that we are considering. Whether we are dealing with stocks, with commodities, or with options, the questions that we ask in this part of the Trading Triad are fairly simple ones: "Is this the right trade for me? Does it match the profile of my personal trading capital and my level of risk tolerance? Is this the right time for me to enter a position? If I enter a position, should I be long or short? What are the appropriate stop loss levels and price targets for this trade? Does this trade represent the best use of my trading capital right now, or are there better opportunities that I should explore? How long do I anticipate being in this trade?"

While the pertinent questions are direct enough, arriving at answers to them can potentially be complex and confusing. After all, there are innumerable trading tools, analytical tricks, technical indicators, black box trading systems, and other devices at our disposal, and it's often difficult to decide which tool or technique we should be using. In fact, most of the training programs, literature and folklore associated with trading focus on just this one subject - the Holy Grail search for an infallible trading methodology.

In mastering this second component of the Trading Triad, then, our task is to separate the wheat from the chaff, to find the answers that make enough sense to us to empower decisive action in the markets. Arriving at those answers requires rigorous back-testing, personal knowledge and experience, a healthy dose of skepticism and good judgment, and sometimes a little bit of luck as well. It also requires a willingness to submit ourselves to the kind of discipline which is essential for effective trading - an awareness of probabilities and risk-reward ratios, an adherence to disciplined money management, and the humility to make mistakes and learn from them. Without that kind of discipline and the hard work that it inevitably entails, our chances for success in the markets are greatly diminished. But if we wholeheartedly embrace this second component of the Trading Triad and really engage in active analysis of the Trade, the experience can be enormously energizing and often quite profitable as well.

The Trader

The third component of the Trading Triad is the one that is most often overlooked, and if we ignore it we invite disaster into our engagement with the markets. It is all about the Trader, the actual person who is seeking an understanding of the market trend in the first component of the Trading Triad and who is digging into the intricacies of trading analysis and execution while striving to master the second component. No matter how skilled we are at mastering the first two components of the Trading Triad, if we ignore the importance of refining our personal role as traders we will not get the results we seek. When that happens, we ourselves can become the reason for our failure in the markets- as Walt Kelly's cartoon character Pogo famously quipped, "We have met the enemy, and he is us!"

Any seasoned trader who is willing to speak honestly about his or her experience in the markets can attest to the validity and importance of this component of the Trading Triad. The more thoroughly we

understand ourselves, the more effective we can be as traders. But at one level or another, we all have the capacity for shooting ourselves in the foot, for taking all of our market experience and wise trading analysis and then ignoring it completely as we execute our trades on impulse, or in an emotional state overshadowed by fear or greed. Understanding ourselves as traders requires an in-depth look at our own psychology, at our habits and prejudices, and at the mental and emotional blockages which allow us to act against our better judgment. When we make self-mastery a part of our personal trading discipline, mastering the Trading Triad becomes a goal that we can actually achieve.

The Challenge of Mastery

When we have all three components of the Trading Triad in place- the Market, the Trade, and the Trader- we will have laid the foundation for a successful and rewarding career in the markets. Giving less than our best to any of the three Trading Triad components can lead to disappointment and frustration, and the process of mastering the Trading Triad can often seem quite challenging. It demands that we stretch ourselves to acquire new knowledge, to reach higher levels of competence, and to confront our most cherished strategies for self-sabotage. And, as in the world of sports competition or professional musical performance, real mastery only comes as a result of seemingly endless repetition and accumulated experience.

Fortunately, however, we have a unique advantage as astro-traders. Astrology is an extremely powerful tool, and when we make it a part of our quest to master all three Trading Triad components, it can help us speed up the process and increase our confidence as we move toward mastery.

When we apply an astrological understanding of planetary cycles to our analysis of long-term price trends, we gain valuable perspectives that can help us clarify and refine our diagnosis of current market conditions. Astrology can help us anticipate critical thresholds in the markets, so that we can be prepared for the profitable opportunities associated with upcoming inflection points and trend reversals.

When we study the dynamic display of planetary aspects and other interactions on a short-term basis, we have a chance to connect with the market's ebb and flow in ways that can help us take advantage of market momentum in positioning our trades. We can be more confident in knowing when to be aggressive in taking profits or protecting our assets, and when to be more tolerant of trading congestion or price consolidation.

And astrology is more than just a potent tool for improving our market timing. It's also a means of gaining a unique understanding of our own psychological makeup. We can use it to identify the unconscious patterns of behavior that might blind-side us if they go unobserved as we engage with the markets, and we can turn a knowledge of our individual horoscope into practical strategies that amplify our strengths for greater trading effectiveness. By using astrology in the markets we can not only time the markets more accurately; we can also time ourselves, so that we can improve our trading performance by capitalizing on our times of strength and by compensating for our times of weakness.

While this book focuses on the role of Mercury in market astrology and astro-trading, it does so with a recognition of the important contributions that astrology can make to mastering all three components of the Trading Triad. With that in mind, we'll begin with a look at Mercury in the astro-trader's natal horoscope. Then we'll explore a variety of ways that Mercury dynamics can be used to enhance our market analysis, and to add to our confidence as we make decisions and take risks in active trading.

Mercury in the Astro-Trader's Natal Horoscope

If you want to gain the full astro-trading advantage as you engage with the markets, it's vital that you look not only at the role that Mercury plays in the markets you are trading, but also at the way that Mercury functions in your own individual horoscope.

If you're a reasonably accomplished astrologer yourself, you probably have the necessary skills and experience to look at Mercury's role in your natal chart as a source of insight into the financial attitudes and trading strategies are most appropriate for you. If that's the case, you can use the information in this chapter to provide you with some guidelines for a Mercury-based analysis of the trading potentials revealed by your natal horoscope.

If you're not an astrologer, however, or if you simply want to focus on Mercury's role in the external trading environment, you may want to skip reading this chapter altogether. But if you make that choice, please don't ignore the importance of understanding your natal horoscope in refining your personal abilities as a trader. You certainly don't have to become an astrologer yourself to gain the benefits that astrology has to offer, just as you don't have to be an automobile mechanic in order to enjoy the benefits of driving a car.

If you're not already well-versed in horoscope analysis, your best course of action is to schedule a consultation with a competent professional astrologer. When you do so, be sure you're working with someone who not only has proven astrological expertise, but who also has personal experience in the markets as well. Come prepared with specific questions about your trading experience and your failures and successes in the markets. An intelligent interaction with a skilled astrologer will help you get in touch with the role that your natal Mercury can play in helping you identify opportunities and potential pitfalls in your trading.

Two Key Mercury Considerations

Mercury, because it is the planet closest to the Sun in the solar system, is never far away from the Sun in the natal horoscope. It is thus impossible for a geocentric natal horoscope to have a Sun/Mercury opposition. It's far more likely that we will find Mercury in the same zodiac sign that the Sun occupies in the natal chart, although it may be in the sign of the zodiac immediately preceding or following that of the Sun.

In understanding the role of Mercury in the natal horoscope, there are two main considerations that can color our individual approach to the markets, and if we fail to take them into account we risk greater liabilities in our trading, simply because we may be blind-sided by our own inability to identify why we do what we do in the markets. The first is the question of natal Mercury's position relative to that of the Sun, and the second is a consideration of the direction of Mercury's motion at the time of birth.

Mercury Prometheus and Epimetheus

When we find Mercury at an earlier degree of the zodiac than that of the natal Sun, no matter where the two bodies happen to fall in the natal horoscope, we can say that Mercury rises before the Sun, or is Mercury Prometheus. If it follows the Sun in zodiacal sequence, it is Mercury Epimetheus. This terminology comes from the mythological story of two brothers, Prometheus, who always faced

forward and looked into the future, and Epimetheus, who always looked backwards, observing and codifying events in the past.

In the natal horoscope Mercury Prometheus, rising before the Sun, is the morning star, visible just before dawn as long as it is not so close to the Sun that its glow is obliterated by the solar light. Mercury Epimetheus is an evening star, appearing in the western sky in the dusky twilight after the setting of the Sun.

Because we associate Mercury with mental traits and capacities, this position of Mercury relative to the Sun can give us some valuable insights into the kind of thinking and decision-making that we are most likely to exhibit in our trading activities.

If we are oblivious to this dynamic through our ignorance of the workings of the natal chart, we can find ourselves repeatedly making mistakes in our market behavior because our unexamined patterns of thought create the kind of booby-traps that can sabotage effective market analysis and accurate execution of our trades. But once we become conscious of these natal Mercury dynamics, we are more likely to be more tuned in to our thought processes as we approach the market environment, and we at least have an opportunity to temper or modify our thinking enough to perform more effectively as astro-traders.

With Mercury Prometheus in the natal chart, an astro-trader is likely to approach the markets from an intuitive, and sometimes impulsive, standpoint. More often than not, there will be a highly refined capacity for pattern recognition, which can be a valuable tool in spotting trading opportunities.

The kind of skill at rapid insight bestowed by Mercury Prometheus offers a distinct advantage to day-traders and to others who rely on quick and accurate assessments of possibilities in the market, allowing for speedy decision-making and the ability to enter trades at just the right time when suitable trading setups and confirming indicators appear. Mercury Prometheus focuses on transforming abstract thought into concrete reality, and this can often be a real benefit to traders who rely on quick and assertive action. But at times it can also be a liability, especially when it leads to precipitous action that ignores hidden risks and inconsistent indicators.

The trader with Mercury Epimetheus in the the natal horoscope, however, is typically much more deliberative in the trading process. This position of Mercury in the natal horoscope promotes the ability to gather and assimilate massive amounts of data, and the Mercury Epimetheus trader thus typically requires some time to digest and absorb the full implications of market complexities before committing to a trading position. Rigorous back-testing can be a salient strong point for any Mercury Epimetheus astro-trader, who in most cases will be highly focused on price history and traditional methods of market analysis.

But having Mercury Epimetheus can also promote "analysis paralysis," with the astro-trader becoming so absorbed in the intricacies of assessing opportunities accurately that the opportunities themselves get passed by without being taken advantage of. Without actually putting money on the line, the Mercury Epimetheus astro-trader isn't really a trader at all, but rather but a passive observer of the markets.

Natal Mercury in Motion

While there are many nuances to these distinctions in the relative positions of Mercury and the Sun in the natal horoscope, simply knowing whether Mercury is Promethean or Epimethean can provide a lot of leverage in modifying our trading behavior in appropriate ways. But those distinctions come into even sharper focus when we add a consideration of the kind of motion Mercury is in at the time of birth.

Most of the time, Mercury is in direct motion, moving rapidly through the degrees of the zodiac in ascending sequence. About three times each year, however, Mercury goes into the retrograde motion, and that retrograde phase will last a little more than three weeks, with a maximum duration of about 25

days. Mercury's progress slows down considerably at the time of the planetary stations, those points in its cycle when it moves from direct into retrograde motion (the retrograde station), and when it ceases its apparent backward motion and begins to move forward again (the direct station).

When we add a consideration of whether Mercury is retrograde or direct to our evaluation of the astro-trader's natal Mercury as Mercury Prometheus or Mercury Epimetheus, we can further refine our understanding of the mental predilections that can empower or inhibit effective performance in the markets.

If Mercury in the natal horoscope is both Prometheus and retrograde, we can expect the intuitive and insightful capabilities to be much more self-referred, creating a mental configuration that will sometimes almost defiantly ignore external signals and potentially pertinent information as the astro-trader makes decisions in the market.

The astro-trader with Mercury Prometheus retrograde will somehow just know in advance what the markets are going to do, and may trade impulsively, plunging into market positions solely on the basis of that highly-internalized insight, whether or not that insight matches the reality of the market at the moment.

While there are times when this tendency can manifest itself as spurts of uncanny brilliance in trading behavior, there are unfortunately also many occasions when it will produce major missteps and errors of judgment.

It is thus especially important for astro-traders with Mercury Prometheus retrograde in their natal horoscopes to exercise high levels of discipline in money management, with specific and inviolable strategies for getting out of losing positions rapidly. Mechanical trading systems that compel unwavering compliance with market signals can be especially useful for astro-traders with Mercury Prometheus retrograde in their natal charts.

If an astro-trader has Mercury Epimetheus in retrograde motion in the natal horoscope, the typical Mercury Epimetheus need for analysis and historical understanding doesn't go away. But unlike an astro-trader with Mercury Epimetheus direct, the Mercury Epimetheus retrograde astro-trader will sometimes look at the results of back-testing and will examine traditional approaches to specific trade setups and market circumstances, and then willfully and rebelliously choose to ignore that potentially valuable information. Whether or not a Mercury Epimetheus retrograde astro-trader actually takes a trade, there will often be a powerful inner conviction that even though the carefully-sifted evidence suggests a particular outcome in the markets, somehow "this time it's different", and irrational or erratic trading behavior can be the result.

Should individuals with Mercury Epimetheus retrograde in their natal horoscopes even think about trading at all? Perhaps not, especially if the would-be trader consistently behaves in the damn-the-torpedoes manner just described. But even so, learning to trade effectively is all about recognizing our natural tendencies and prejudices, and then figuring out how to take action consciously in spite of those tendencies, choosing instead to follow specific rules and strategies to get specific results. That decision to go beyond the limits of our predilections may present some real challenges, but it is nevertheless a matter of individual choice and determination. Making that choice is a highly personal matter, and it's of course possible to certain individuals with natal Mercury Epimetheus and retrograde to come to that decision. If they do choose to trade, however, they need to take extra pains to create rigorous trading rules and to follow them relentlessly.

Mercury and the Money Houses

While a consideration of both Mercury's position relative to the natal Sun and of its motion at the time

of birth can give us useful insights into trading potential, these are certainly not the only factors that we can consider in evaluating the role of Mercury in the astro-trader's natal horoscope.

While it is always an inadequate exercise when we try to evaluate a natal chart without doing a comprehensive analysis of the many natal factors that combine within it, it's nevertheless useful to look at Mercury's role as a case in isolation, mainly because Mercury plays such an important part in helping us understand the complex thought processes that go into the process of trading. In fact, trading is almost entirely a mental activity, and the more we know about how we think as astro-traders, the more rapidly and comfortably we can move toward real mastery of the markets.

As a basic approach, it's useful to consider Mercury's relationship to the planetary rulers of the money houses in the natal chart: the second house, which is associated with core values and retained resources; the fifth house, which is the focal point in the horoscope that is related to speculation and investments, along with the ability to take chances and to put money at risk; the eighth house, which is about other people's money, indebtedness, and trading on margin; and the eleventh house, which the ancient astrologers referred to as the House of Acquisition, the portion of the natal horoscope that tells us about our ability to acquire wealth and to gain rewards from the risks that we take.

In each case, we are concerned with the planet which rules the zodiac sign on the cusp of the house in question. My personal preference is to use traditional rulerships in natal horoscope analysis, but it's also acceptable to use modern planetary rulerships or even a combination of modern and traditional techniques.

In the traditional system of astrology, Aries is ruled by Mars, Taurus is ruled by Venus, Gemini is ruled by Mercury, Cancer is ruled by the Moon, Leo is ruled by the Sun, Virgo is ruled by Mercury, Libra is ruled by Venus, Scorpio is ruled by Mars, Sagittarius is ruled by Jupiter, Capricorn is ruled by Saturn, Aquarius is also ruled by Saturn, and Pisces is ruled by Jupiter.

The modern system of zodiacal rulerships assigns the same planetary rulers to Aries through Libra and to Sagittarius and Capricorn, but gives rulership of Scorpio to Pluto, of Aquarius to Uranus, and of Pisces to Neptune.

Note that the planetary ruler of a house does not necessarily need to be located in that house itself to claim its rulership. It may show up at any location in the natal chart, and wherever it turns up, it is that planet that we want to look at with regard to its relationship to natal Mercury. That relationship may be expressed as one of the of the approximate angular relationships known as planetary aspects, or it may involve midpoint structures, planetary pictures, mutual receptions, or parallels and contraparallels in declination.

As we examine the relationships of Mercury with the rulers of the money houses in the horoscope, we should ask ourselves all of the key questions that are a part of competent horoscope analysis: "Are the planetary aspects applying or separating? Are they stressful, or are they harmonious? Do they pull in the influences of additional planets as well? Are they a part of chart patterns like T-squares or Grand Trines, or do they activate symmetrical alignments in the horoscope? Are there planetary relationships expressed through dispositors that give us additional information about Mercury's role?"

The answers to all these questions depends, of course, on the configurations that are found in the particular horoscope under consideration, but just asking the questions while examining the chart will often inspire useful insights into the role that Mercury plays in describing the thought processes and mental biases that we can expect the astro-trader to exhibit.

Mercury Ruling Money Houses

When Mercury is the ruler of one or more of the money houses in the natal horoscope of an astro-trader, it deserves particular attention. Mercury can function as an amplifying force, pumping up the volume on everything that is associated with the particular house that it rules.

The astro-trader may be preoccupied with thinking about those matters, and that thought process is typically externalized as writing or conversation. There can also be cases in which travel is also included as a means of Mercury expression, for example in the case of a trader with Mercury ruling the natal eighth house who frequently travels to conferences and workshops that are about minimizing trading risk and managing tax situations or margin accounts more effectively.

In other cases we may find that the Mercury amplification of a natal money house remains entirely focused on the implications of that house in the trading process itself, and based on the strength of Mercury in the natal chart we can spot the individual's potential for problems in the trading process, or identify the particular strengths that can make him or her unusually successful in the markets.

In every case, however, with Mercury involved as the ruler of a natal money house we need to pay particular attention to Mercury's relationship to other planets in the horoscope. If there is a Mercury aspect, a relationship of dispositorship, or another type of Mercury connection with a specific planet, the role of Mercury will be colored and modified by the nature of the planet involved. The more deeply we can explore Mercury's connection with that planet, the more insights we are likely to gain into the trader's mental makeup and its potential influence on trading behavior.

The role of Mercury as an influence in an astro-trader's natal horoscope is even stronger if Mercury is both the ruler of a money house and is also unaspected by other natal planets. This condition, which the astrological tradition calls a peregrine planet, is an indication that Mercury is extraordinarily powerful, and will likely become an overwhelming influence in the astro-trader's thinking and behavior.

While having a peregrine Mercury in the natal chart can lend incredible strength and versatility to the astro-trader's capabilities, it can also bring its share of challenges. Astro-traders with a peregrine Mercury ruling a money house in the natal horoscope need to be especially cautious about over-thinking their trades, or about believing that they can outsmart the market. When traders allow themselves to indulge in such excesses, Mercury is quite likely to put in an appearance in his trickster role, offering the trader unanticipated twists and turns that can prove to be both humbling and expensive.

Even so, with Mercury as the ruler of one or two money houses the natal horoscope, there will always be other money houses which are ruled by different planets. That's why it's important to determine whether or not Mercury has specific connections with those other planets.

When that's the case, an examination of Mercury's interactions with those other planets will typically give us a much greater understanding of the astro-trader's thought processes and their manifestations in market behavior.

Although the purpose of this book is not to provide a comprehensive guide to natal horoscope analysis, it does have the aim of encouraging a thorough examination of the ways that Mercury can interact with other planets and factors in the birth charts of astro-traders. With that in mind, here are some general guidelines for examining Mercury and its relationships with the planets that rule the money houses of a natal chart:

Mercury and the Sun

Because Mercury in a geocentric horoscope is never more than 28° away from the position of the Sun, we don't have to consider planetary aspects between these two bodies. We should, however, take a look at the other potential dynamics that we have just described, especially mutual receptions, planetary pictures, and symmetrical alignments. Most of all, though, it's useful to get a core understanding of whether Mercury in the natal chart is Prometheus or Epimetheus, and to the factor in the corresponding characteristics that we have already described.

In each case, the connections between Mercury and the Sun will tell us something about the degree to which the astro-trader personally identifies with the process of market analysis. A strong sense of

individual ownership of the conclusions reached about the possibilities for a successful trade will sometimes create potential problems for the trader, who may become so convinced that the analysis is correct that he or she tries to tell the market what to do, rather than simply observing market actions and adjusting trading strategies and positions accordingly.

Mercury and the Moon

When the Moon is the planetary ruler of one of the money houses in the chart, and when Mercury is involved in some kind of notable relationship with the Moon, it's an especially important interaction for us to take into account. The Moon in the astro-trader's chart will tell us a lot about the nature of the individual's emotions, and a great deal of success in trading is connected with our ability to recognize and manage our emotional fluctuations.

If there is a problematical relationship between Mercury and the Moon in the natal horoscope of an astro-trader, we can gain extremely useful insights into potential obstacles to effective trading. Along with those insights we have an opportunity to come up with creative strategies for managing the emotions in ways that can make a profitable difference in trading effectiveness.

Mercury and Venus

As the lesser benefic of traditional astrology, Venus has a role as one of the money planets in the astro-trader's horoscope. Its relationship to Mercury can help us understand the trader's core sense of values, the ability of the trader to refine and improve trading plans and strategies, and the trader's tendency to be attracted to certain types of market dynamics or specific trade set-ups.

A positive connection between Venus and Mercury can open up lots of profitable opportunities for an astro-trader. But Venus has a strongly magnetic role in the natal horoscope, and there are even times when we can avoid potential trading mistakes by expanding our knowledge of what we find naturally attractive, especially when that attraction is so compelling that it creates blind spots in our ability to analyze market opportunities correctly.

Mercury and Mars

When Mars is the ruler of one of the money houses in the horoscope, it plays a particularly significant role in describing our ability to take action in the markets. Its connection with natal Mercury will let us know how to evaluate our ability to move from trading theory and market analysis into the role of active risk-taking. It is thus a vital factor in understanding our ability to be effective in the markets, since a strong Mercury/Mars connection will typically empower a trader to follow through in translating trading insights into profitable buying and selling.

It's particularly interesting to examine Mercury/Mars dynamics when the astro-trader's Mercury is both Epimetheus and retrograde. When that happens, Mars can either act in a way that allows the trader to compensate for Mercury's position and motion, or it can exacerbate the circumstances to such an extreme that it makes it obvious that this is an individual who will be likely to face insurmountable difficulties in the trading environment that make it difficult, if not impossible, to succeed at profitable trading.

Mercury and Jupiter

The conventional understanding of Jupiter in a natal horoscope is that it brings lots of good things into the life of the native, and that can certainly be the case as we examine its role in the natal horoscope of an astro-trader. When it is the ruler of one of the money houses in the horoscope, Jupiter expands the emphasis on that part of the chart enormously.

While that can often provide extraordinary opportunities for an astro-trader, it can also be something to watch out for, since a strong Jupiter influence in active connection with natal Mercury can lead to the kind of expansive thinking that may result in over-trading or in taking market positions that are too large for effective money management.

Good trading always involves a clear sense of dedication to specific trading rules, and an overactive Jupiter can sometimes convince us to throw those rules out the window and take chances that we shouldn't be taking.

Mercury and Saturn

It is when we examine connections between Mercury and Saturn as the ruler of one of the horoscope's money houses that we can best get an understanding of the kinds of rules and structures that are most appropriate in promoting the individual's effectiveness in trading.

Traders with strong and positive Mercury/Saturn dynamics in their natal charts are typically deep thinkers, and they tend to take trading rules and responsibilities very seriously. Although Saturn can occasionally indicate major blockages in the trading experience, including big losses in the markets, it can also give us clues about the kinds of approaches to time and money management that can create the limits that are so essential to profitable market activity.

When we look at Mercury/Saturn relationships we come face-to-face with the paradoxical adage which reminds us that "Losers in the markets think about winning, but winners in the markets think about losing." That may seem counter-intuitive, but it is the kind of understanding that encourages us to enter concrete stop-loss orders with our trades, and to take money off the table when our market positions become profitable.

Mercury and Uranus

We take Uranus into consideration only if we are applying modern rulership associations to our analysis of the money houses in the astro-trader's horoscope. When natal Mercury is in an energetic connection with Uranus, the astro-trader's thought processes are typically extremely quick, sometimes to the point of being precipitous and ill-advised.

A positive Mercury/Uranus combination can enhance the trader's capacity for electrifying connections with fast-paced market dynamics, and there is often an "easy come, easy go" mentality that's not completely inappropriate for effective trading, especially for day-trading or short-term swing trades.

This planetary relationship can especially amplify and accelerate the analytical skills of an astro-trader with Mercury Prometheus in the natal chart, but it underscores the need for the precautions that are required for that kind of quick-draw involvement with trading opportunities. Astro-Traders with a strong or significant natal Mercury/Uranus emphasis need to be particularly cautious about innovation simply for the sake of innovation, especially when trading tools and methods are concerned.

Mercury and Neptune

With Neptune as the modern ruler of a money house in an astro-trader's natal horoscope, there can be a strong emphasis on the power of intuition in the trading process, especially when Mercury is in a favorable relationship with Neptune. Experienced traders who have spent years becoming attuned to the ebb and flow of market rhythms can often rely on intuition as a seemingly infallible guide to taking the right action at the right time in the markets, but it's typically not wise to trust intuitive insights too much as an astro-trader, especially if the trader is relatively new to the ins and outs of trading.

A debilitated Mercury connection with Neptune in the natal horoscope can also indicate a susceptibility to get-rich-quick propositions or Ponzi schemes, or even worse, suggest a great capacity for self-deception, and it goes without saying that these tendencies can be fatal to a successful trading career.

Mercury and Pluto

When we find Pluto serving as the modern ruler of a money house in a natal chart, it can give us a hint about the astro-trader's potential for dealing with big money and large-scale trading positions. This is especially true if Mercury has a favorable relationship with Pluto in the natal chart, but even that kind of big-money connection carries a word of warning: unless the trader has an ample supply of trading capital, and unless there is also an ability to take big trading losses in stride, the astro-trader may unwittingly enter positions that can have a devastating impact on the long-term outcome of trading activities, even to the point of bankrupting the trader and putting an end to market activity once and for all. This potential challenge is especially deserving of close examination when Pluto is the ruler of the eighth house in an astro-trader's natal horoscope, which can indicate the possibility of over-extension of margin indebtedness, or for taking on extensive risks with other people's money.

Example Horoscopes

To get a clearer picture of the ways that Mercury can function in a trader's natal horoscope, let's examine a couple of sample charts and explore the Mercury dynamics in them. As we do so, we can see some of the factors which can lead to either success or to failure in the markets.

A Successful Speculator

Our first horoscope is the chart of an individual who had a long and extremely successful career in business and the markets. He had an excellent knack for identifying profitable opportunities, and was able to leverage those opportunities consistently in acquiring and preserving a large personal fortune. Mercury in his natal chart is both Epimetheus and direct, so we can immediately see that he has a tendency to analyze trading situations carefully. Note as well that Mercury is in its dignity in the sign of Virgo, a factor which adds considerable weight to this trader's ability to apply his analytical skills to the markets and then profit from that analysis.

Geocentric
Tropical
Koch
True Node

When we look at the fifth house in this chart, we find Sagittarius on the cusp, ruled by Jupiter, which is conjunct the trader's natal Mars. This combination not only expands the size and scope of the trader's speculative moves, but also contributes to his ability to take successful action in the markets. Although there is no aspect here between Jupiter and Mercury, Mercury in Virgo is in the sign which is the detriment of Jupiter. This factor can keep Jupiter from going completely wild, so even though the trader might take extremely large positions in the markets, he is capable of paying attention to the potential downside in the risks that he takes. This ability to think about the consequences of losing is a vital part of a successful trading career.

With Gemini on the cusp of the eleventh house in the chart, we turn to Mercury as the planetary ruler. Mercury is the strongest planet in this horoscope, so this trader definitely has the ability to take money off the table in order to bring in healthy profits from trading activities. With Mercury conjunct Venus, we can expect those profits to be quite rewarding financially, and their size is enhanced even more by the Mercury/Apollon semi-square. With Mercury trine both Neptune and Vulcanus, this trader is likely to the find imaginative and powerful ways of reaping rewards that might escape others, and with Mercury quincunx Hades he may occasionally have opportunities to cash in on market divergences that have implications which others may find uncomfortable or even repulsive.

The Sun is the ruler of this trader's second house, and the Sun is posited in the second house itself as well. This individual is thus likely to identify quite strongly with the wealth he accumulates, and others are likely to see him first and foremost as someone who is rich without necessarily comprehending the techniques or motivations which lead him to affluence. Mercury doesn't have a strong connection with the Sun in this chart, so it's unlikely that this individual will communicate very much about his real financial status.

Aquarius is on the cusp of the eighth house in this successful speculator's natal horoscope, so we will consider Saturn, the traditional ruler of Aquarius, as well as Uranus, the modern ruler, in understanding this trader's approach to other people's money. Saturn, of course, acts as an inhibiting factor here, so this trader is likely to take financial transactions with others very seriously, especially as a means of defining

who he really is. Saturn is extremely weak in this chart, however, so this trader is unlikely to set many limits in using other people's money to his own advantage. With Uranus as the co-ruler of the house, he is capable of making market moves that can take others by surprise. Once again, though, there is not a strong connection between Mercury and Uranus in this chart, so he is unlikely as well to give very much thought to the impact that his actions may have on the counterparties to his trades.

Because Mercury has its strongest association with the eleventh house in this chart, it's clear that this trader's principal preoccupation is with the returns he can get from the risks that he is willing to take. While this horoscope includes many indications of trading ability and financial success, Mercury's key role is in helping this trader use his extraordinary mental abilities to bring in exceptional rewards from his trading activity.

As to the nature of the trader's mental activity itself, we can gain some additional insights by examining Mercury's connection with some key planetary midpoints in the horoscope. Mercury is semi-square the Moon/Zeus midpoint, indicating an extremely lively mind with lots of creative insights and the kind of strong emotional edge of that can sometimes cloud the mental process. This can enhance the awareness of profitable opportunities, but it can also be problematical if too much emotion gets filtered into the trading process. This trader is thus likely to make his share of mistakes in the markets, especially when he becomes too impulsive in following through with some of the profitable opportunities that he discovers. Mercury's activation of the natal Zeus/Admetos midpoint provides a good counterpoint, however, because it strengthens the trader's tendency to think things through carefully, and to prepare thoroughly before committing large amounts of capital.

Even so, with Mercury semi-square the Uranus/Pluto midpoint, this trader is likely to have a strong tendency to change his mind rather quickly. This may be because he spots new and presumably better opportunities which can rapidly lure him away from a planned course of action, but it may also be because he sometimes experiences disappointments with the results he is getting, and then suddenly decides to look for greener pastures. With Mercury in opposition to the midpoint of Hades and the Midheaven in this natal chart, it's clear that this trader is not at all high-minded in his approach to the markets. He is likely to have a very low opinion of the counter-parties in his trades, even though he may keep his negative feelings to himself. Above all, he is clearly capable of the kind of ruthless, cutthroat behavior that will help him make sure that he is getting the big profits that he seeks.

A Chronic Loser in the Markets

Chronic Loser
Male Chart

*Geocentric:
Tropical
Koch
True Node*

The second natal horoscope that we will examine is the birth chart of an individual whose entire professional life has put him in ongoing contact with the markets and with trading activity, but who has been singularly unsuccessful in his trading efforts. He has Mercury Prometheus and retrograde, which is the hallmark of the market plunger who impulsively puts money at risk and adamantly refuses to pay attention to the information the market is offering him about potential shifts in trend.

The Mercury Prometheus and retrograde motif in this horoscope is echoed in Mercury's relationships through dispositorship. Neptune has some prominence in this horoscope because of its close conjunction with the Midheaven. This configuration is not unusual in the natal charts of individuals who spend time in the Navy, who have major problems with alcohol or drugs, or who have over-active imaginations. In this case, all three correlations are true for this traders, and much of that planetary energy is transferred to Mercury. Because Neptune in his chart is dispossited by Mercury and is in the face of Mercury as well, his thought process is often informed by flights of imaginative fancy or by perceptions muddled by alcohol abuse. But the interplay of planetary influences doesn't stop there. Mercury is in turn dispossited by Mars, so this is an individual who spends very little time in thinking things over, but is far more likely to take precipitous action instead. That tendency is reflected in his behavior in the markets.

With Aries on the cusp of the fifth house in this horoscope, it is in fact Mars which drives this individual's push toward risk-taking and speculation. Although the influence of Mercury does little or nothing to slow Mars down in this case, Mars itself is posited in the third house of the horoscope, so the trader is likely to believe that he has given adequate thought to his trading decisions. In fact he may feel that his impulsive traits and the big risks that he takes are actually a means of personal self-expression. That personal identification with his positions in the markets is amplified due to the influence of a separating square of Mars to the Ascendant in the natal chart.

The eleventh house in this trader's horoscope has Venus as its ruler. Mercury is in the triplicity and the face of Venus, and with Venus disposed by Saturn, this individual is likely to feel that the rewards he gets from his trading activity are woefully inadequate. And, with the imbalance between risk and reward that this chart demonstrates, his assessment will be right in many cases.

Saturn is also the ruler of the second house in this trader's natal chart, and Mercury is in the terms of Saturn. This individual is thus likely to experience big shortfalls in personal finances, and it's quite likely that he may find it extremely difficult to get ahead, or even to break even when money matters of any sort are concerned.

While some individuals who have Saturn as a second-house ruler are able to marshal its energies to provide financial structure and security, in this case that seems unlikely, since Saturn is extremely weak and is disposed by Mars. When things get tough financially, the tendency is thus not to institute more checks and balances, but rather to plunge ahead with even bigger risks, in the hopes that a dramatic roll of the dice will magically produce a financial turnaround.

The eighth house also presents its share of challenges. With Cancer on the cusp, this house is ruled by the Moon, so there is considerable emotion involved with this individual's connections to taxes, insurance, indebtedness, trading margin, and other people's money. The Moon is not only disposed by Mars, it is also in the terms and face of Mars, so the emotional expressions can be particularly intense, and are likely to activate bursts of anger or belligerence. Needless to say, such emotional extremes are not congruent with the kind of internal balance required for effective trading.

When we look at Mercury's role as a potential activator of planetary midpoints in this natal horoscope, we find only one significant planetary picture: Mercury is sesquiquadrate to the midpoint of Saturn and the Aries Point in the chart. This planetary picture is the signature of the conclusion of a work project, of the termination of a contract, and of layoffs of a workforce. In the case of this particular chart, the individual has had repeated experiences with such matters.

But Mercury's activation of the Saturn/Aries midpoint is also important in another context. It is emblematic of the individual's general mindset and attitude, both in approaching the markets and in dealing with life in general—the belief and core understanding that the world as a whole is a negative place, and that there are severe limits to the benefits that life offers. While other traders may perceive the markets as an endless stream of opportunities, this individual is likely to have extremely low expectations of success, even though his compulsive behavior as a gambler in the markets is driven by the persistent illusion that maybe just this once he'll get lucky and make a big score.

Horoscope Synthesis and the Astro-Trading Advantage

Note that in examining these charts, we aren't looking for particular Mercury signatures that infallibly signal failure or success in the markets. Our goal is instead to come to a comprehensive and dynamic understanding of the way that Mercury functions in the natal chart, particularly with regard to the money houses, and with a special emphasis on the trader's ability to handle risk appropriately. That understanding comes about through a process of synthesis; as we combine observations at different levels, and combine and contrast the indicators we discover in the individual horoscope, we can arrive at a composite picture of the role that Mercury plays. That understanding in turn can become the basis for a more thorough examination of the trader's natal chart, with the aim of developing specific trading disciplines and market strategies that take full advantage of the individual's unique capabilities.

While Mercury clearly plays a different role in each of these natal horoscopes, there is one important point of commonality: an examination of Mercury helps us come to a comprehensive understanding of the mental makeup and characteristic thought processes of the individual trader. That's why connecting

with Mercury in the natal chart can offer us such a big advantage in the trading environment. Unless we can understand what we think, how we think, and why we think that way, we have little hope of modifying our thought processes, and instead are likely to become the victims of our habits and prejudices.

Unless we can control the way that we think, we simply can't learn to trade effectively. Someone once commented that "trading is a form of psychological brain surgery," and that observation is even more appropriate in the light of the role that Mercury can play in our behavior as traders. When we understand the unique ways that Mercury functions for us as individual traders, and then observe our trading behaviors from the Mercury perspective, we have an extraordinary opportunity to change our thoughts, to change our actions, and to change the results that we get from our trading.

Mercury in Money Horoscopes

As traders we are concerned with the interaction of price and time in the markets. We use market charts to depict the passage of time on the horizontal axis, and add notations on the vertical axis to record fluctuations in the price of the stock or commodity we are tracking.

In actuality, when we look at a market chart we are not only concerned with the specific price of the stock or commodity we are trading, but also with how that price has changed over time, and what the history of price fluctuations can tell us about the potential for more price fluctuations in the future. Indeed, the current price trend that's reflected in a market chart is not only the result of negotiations between buyers and sellers; it is also a representation of expectations about future value as well.

When we apply astrology to the markets, the most obvious correlations are with the axis of time. After all, planetary alignments take place at specific moments in time, and planetary cycles repeat at regular time intervals. Time itself is something that we measure in clearly-defined increments, and in our work with the markets the relative value of those increments doesn't change.

When it comes to price in the markets, however, things immediately get more complicated. There are of course ways of correlating specific planetary positions in the zodiac with numerical values that can be associated with price values on a market chart, and by tracking a planet's change in position over time we can often gain valuable insights into price trends in a market. But at a fundamental level, there's much more to price than numerical equivalents. Whether the market we are trading is accounted for in dollars, euros, or yen, the current price action is not just about pips or points. Nor is it simply a way of codifying degrees of confidence about the sustainability of prices in the future. It's also intrinsically connected with money, and with our perceptions of monetary value.

The value of money is not static. It fluctuates dramatically over time, and any attempt to assess the value of a currency has to consider that fluctuation if it is to be useful in making decisions in commerce or in the markets. While various economists in the past century have devised formulas for computing the value of money over time, the notion of a time/ money connection is in itself not new. In fact, Leonardo of Pisa, popularly known as Fibonacci, specifically included time-value in his monumental work *Liber Abaci*, which was first published in 1202.

While Fibonacci is best remembered as the originator of the Fibonacci series, a numerical sequence that describes geometric patterns of growth in nature (and in the markets as well), *Liber Abaci* is not just a discussion of that concept. It is a comprehensive textbook of basic mathematics, and of the practical applications of mathematical principles in commercial enterprises. The problems and examples in the book display an extremely sophisticated understanding of the fluid complexities of currencies and exchange rates, and of the changing value of money over time.

Shifts in monetary value also influence the action of the markets, and that influence goes beyond the realm of mathematical connections. The impact of the changing value of money on market activity, in particular those shifts in value created by changes in central bank monetary policy, was the subject of a study by Ben S. Bernanke and Kenneth Kuttner in 2003. Bernanke presented their findings in lectures at Widener University in Pennsylvania and at the London School of Economics in October of that year.

"We find that unanticipated changes in monetary policy affect stock prices not so much by influencing expected dividends or the risk-free interest rate," Bernanke said, "but rather by affecting the perceived riskiness of stocks. A tightening of monetary policy, for example, leads investors to view stocks as riskier investments and thus to demand a higher return to hold stocks. For a given path of expected dividends, a higher expected return can be achieved only by a fall in the current stock price."

To get an even richer understanding of the psychological dimensions of value and risk and their connections with money, we can also turn to astrology. Astrology as a symbolic system has a lot to tell us about value, and a study of astrological texts will reveal many planetary associations with money. For example, Venus and Jupiter are sometimes referred to as the money planets in horoscopes, because

traditional astrology considered them the lesser and greater benefics, the bringers of good things, including money, in small or large quantities.

In modern astrology Pluto is also associated with money, especially in the context of the kind of transformational power that can be wielded when large amounts of capital come into play. And, as Georgia Stathis has pointed out in her innovative studies of monetary history, long-term Pluto cycles have some significant correspondences with the evolution of currencies and with major shifts in the nature of money itself.

Because monetary value always has some connections with how we feel about certain goods or services, about the wisdom of buying or selling a particular stock, or about other types of monetary transactions between consenting parties, there is also an emotional component to money. While it may be an oversimplification to say that money is nothing more than a crystallization of emotions, when we deal with the role of money in the markets we can't afford to ignore feelings. At least that's a reasonable conclusion when we consider the research done by Bernanke and Kuttner in 2003.

In simpler terms, we can see money's emotional component in everyday commerce as well. A item with a \$1,000 price tag may seem exorbitantly over-priced to one individual, while another person may consider it a real bargain—the dollar amount remains the same, but the two individuals have distinctly different feelings about its worth.

In general, money is a subject that carries a big emotional charge, as is easily demonstrated when we witness a political debate or engage in dinner-table conversation about the family budget. The astrological factor most closely associated with emotional energy is the Moon, and an examination of the role that the Moon plays in a natal horoscope can often provide useful insights into an individual's attitudes about money.

But even though markets are driven by emotional extremes of fear and greed, in this book we are particularly concerned with money's connection to Mercury rather than to any other planets. When we look at Mercury in the horoscope of an individual or a business, we get a glimpse of money as a transactional force in commerce and communication.

Mercury emphasizes one of the key characteristics of money: while it can be accumulated and hoarded, it has its greatest value when it is circulated, fulfilling its function as a medium of exchange.

That characteristic of money is, of course, especially important to us as traders, and it's particularly significant if we intend to bring the astro-trading advantage to our engagement with the markets. Mercury not only connects us to the movement of the markets; it also links us to the money flow that makes up the shifting value which is based in the give-and-take dynamic of the markets themselves, as well as in expectations of price fluctuations and future value.

With that Mercury connection in mind, we can gain valuable information about currencies and financial institutions when we examine their horoscopes with Mercury as a focal point. As we do so, however, we need to remember that Mercury in this context is acting as a messenger, and that the message Mercury is delivering is best understood by examining the other planets that Mercury activates in the horoscope.

The most direct way of examining the horoscope message that Mercury is giving us is by looking at those charts on a 90-degree dial, a horoscopic representation that emphasizes eighth-harmonic planetary relationships. The 90-degree dial has a moveable pointer, and if we align that pointer with the position of Mercury in the chart, we can immediately see the key planets and planetary midpoint structures that Mercury activates in the eighth harmonic, either conjoining the sensitive point or aspecting it in an opposition, a square, a sesquiquadrate, or a semi-square. In each case, those planetary pictures can provide us with useful clues about the true nature of the currency or institution and its potential impact on the trading environment.

Although there are many horoscopes that can provide us with useful information in understanding

money and its relationship to the markets, we can get a good sense of the astrological signals we should pay attention to by looking at just a few examples. Two types of charts are presented here: first, some key horoscopes relating to currencies themselves, and secondly, a few representative horoscopes of stock exchanges.

While a quick look at each chart through the Mercury filter will give us some key insights that can give us a starting point for a more thorough investigation, the comments here are not intended as a complete analysis. They are just an illustration of the value we can find when we begin our examination of financial horoscopes by looking at the role that Mercury plays; when we consider current astrological influences on these charts as a tool in forecasting economic or market trends, our task is enormously simplified when we view them through the Mercury lens.

Free Coinage Act London,
England Dec 301666
12:00:00 PM LMT

The Free Coinage Act

This British law effectively transformed global currency structures, for the first time removing coinage as an exclusively royal prerogative and setting the stage for future central banks, currency manipulations, and financial panics. Mercury activates the Neptune/ Kronos midpoint in this chart, the astrological signature of large-scale deceptions from the top down. It's also within orb of the Saturn/Admetos midpoint, indicating a total standstill and the creation of long-term structures and relationships.

U.S. Coinage Act
New York, NY
Apr 2 1792
12:00:00 PM LMT

The U.S. Dollar

The birthday of the dollar was the passage of the U.S. Coinage Act in 1792. With a noon chart for the event, Mercury activates the Midheaven/Ascendant midpoint, giving it a solid connection to general commerce and social interactions. The Midheaven/Jupiter connection hints of popularity, wide public acceptance, and positive expectations. But the Saturn/ Admetos midpoint that we saw activated in the Free Coinage Act is even more strongly emphasized here, emblematic of scarcity, restriction, and long-lasting structures and institutions.

U.S. Treasury Washington DC
Sep 21789 12:00:00 PMLMT

U.S. Treasury

Mercury in this chart precisely aligns with Vulcanus; this is thus first and foremost a picture of the power of the state. With the Venus/True Lunar Node midpoint in play, the public role of the Treasury is generally seen as beneficial, but the activation of the Saturn/ Apollon midpoint reveals a role in creating widespread social separations and distinctions. The activation of the Uranus/Poseidon midpoint is also telling— while the Treasury has a role as a life-sustaining force, it is also an instrument of propaganda.

U.S. Paper Currency Act

Congress authorized paper currency in the U.S. to help finance the Civil War; the Mars/ Hades midpoint is about slavery, conflict, and atrocities. The sense of separation and desperation is reinforced by the emphasis on the Saturn/Aries Point midpoint. The activation of the Cupido/True Lunar Node midpoint suggests public acceptance of the currency for the common good, while the Venus/Apollon midpoint reveals its inflationary nature. With the Uranus/Kronos midpoint emphasized, the power of the state is suddenly and forcefully imposed.

Federal Reserve Bank

The authorization of the Federal Reserve was a watershed event in financial history, and with Saturn activated in this horoscope a new structure was clearly being created. Looking through the Mercury lens reveals the key role that Apollon plays— the Pluto/Apollon midpoint indicates a modest beginning that leads to very big consequences; the Sun/Apollon midpoint says that this is an institution that's highly successful in sustaining itself; and the Aries Point/Apollon midpoint reveals its global influence and importance.

Federal Reserve Operatio
Washington DC Nov 16 1914
12:00:00 PM EST

Federal Reserve Operations

The chart for the start of Fed operations has Mercury aligned with Cupido, which, along with the activation of the Moon/Ascendant midpoint, indicates the central bank's acceptance as a social institution with a lot of public influence. But Mercury also aligns with Hades, so this institution contributes to poverty and corruption, and with the activation of the Chiron/Admetos midpoint it consistently creates problems even as it ostensibly tries to do good.

Bretton Woods Act
Washington, DC Jul 31 1945
12:00:00 PM

Bretton Woods Act

The Bretton Woods Agreement was reached on July 22, 1944 to fix international currency exchange rates; this chart is for its ratification by the U.S. Congress a year later. It's interesting because Mercury once again activates the Saturn/Admetos midpoint that figured prominently in the Free Coinage Act and U.S. dollar charts. This was an extremely forceful event, as evidenced by the Uranus/Zeus midpoint; with the activation of the Kronos/Apollon midpoint we see the power of the state expanding internationally.

Dollar/Gold Stopped
Washington, DC Aug 15 1971
12:00:00 PM

Dollar/Gold Convertibility Ends

U.S. President Richard M. Nixon's surprise announcement that the dollar would no longer be redeemable in gold, and would be allowed to float in value versus other currencies, effectively ended the Bretton Woods Agreement. Mercury at the Zeus/Kronos midpoint is the signature of bold leadership in an act of war (reinforced by the warlike attitude described by Mars/Vulcanus), and the powerful Sun/Pluto midpoint signals an increasing flow of vital substances. The announcement came just three days after a Neptune station; the activation of the Moon/Neptune midpoint indicates deception of the public.

Japanese Yen Tokyo, Tokyo
May 101871 12:00:00 PMLMT

Japanese Yen

The horoscope for the yen reveals that currency's unique relationship to the Japanese social structure. The activation of the Sun/Cupido midpoint shows a strong sense of community, while the Venus/Apollon midpoint emphasizes harmony and equanimity as core values. With Mercury also activating the Sun/Admetos midpoint, there's an indication of perseverance and conservative thinking, with a high value placed on the concept of the homeland in general and on real estate in particular.

**Euro First Trade Frankfurt am Main,
Germa Jan 41999 7:00:00 AM CET**

Euro

There are many precursor charts to the creation of the euro, which went into effect on January 1, 1999; this First-Trade horoscope is especially important, with Mercury triggering the Ascendant/Aries Point, signifying the currency's global role and indicating a constant stream of meetings in a variety of meeting places. The Sun/Pluto midpoint is linked to the distribution of vital resources, but with the activation of the Hades/Zeus midpoint there's a lack of purposeful behavior in favor of compulsory inactivity. The Admetos/Poseidon midpoint suggests that high-minded ideas get rejected, and with the activation of the Moon/Uranus midpoint there's upheaval and unrest among the public, with an ambitious, energetic woman playing a key role.

NYSE_McWhirter New York,
NY May 171792 7:52:00
AM EST

New York Stock Exchange

The unusual time notation for this chart comes from the work of Louise McWhirter; the chart is remarkably reliable as a forecasting tool. With Mercury's alignment with Pluto, the NYSE is definitely involved with money and power. The activation of the Zeus/Aries Point midpoint indicates an aggressive player on the world stage, strongly linked to the machinery of economics. The Midheaven/Jupiter midpoint signals abiding optimism, while the Midheaven/Poseidon midpoint adds an idealistic dimension. The picture is tempered, however, by the Admetos/Vulcanus midpoint, showing major setbacks and obstacles at the hand of fate.

Securities & Exchange Commission

With the Chiron/Zeus midpoint activated, the Securities and Exchange Commission is clearly meant to exhibit forceful regulatory leadership, but often has problems doing so. The Mars/True Lunar Node midpoint provokes a constant pull toward collusion instead of regulation. But the Sun/Uranus midpoint activation indicates that the SEC will sometimes act in surprisingly energetic ways that can impact the direction of the markets.

Paris Bourse Paris, France
Nov 151823 12:00:00
PMLMT

Paris Bourse

The horoscope for the Paris Bourse is included here because it provides an interesting contrast to the NYSE chart. Despite its antiquity, this stock exchange is hardly a major player on the world stage. The activation of the Sun/True Lunar Node midpoint emphasizes its communal connection to the public and its role as a witness to important events rather than as an agent of significant action.

Bombay Stock Exchange

Mercury aligns with the True Lunar Node in this chart, so this stock exchange emphasizes connections and relationships. Mercury triggering the Mars/Apollon midpoint is a sign of accountability, and it also signals a tendency toward rising markets. The activation of the Midheaven/Aries Point midpoint signifies public conversations that can have a global impact, but with Mercury hitting the Uranus/Cupido midpoint, much of that communication is self-congratulatory. With the activation of the Mars/Neptune midpoint, the action on this exchange can at times seem inspired by genius, but it can also appear to be completely insane.

Mercury & First-Trade Charts

One of the key tools that we have for astro-trading analysis is the First-Trade horoscope, which is an astrological chart cast for the time of the opening bell on the day the stock was first publicly traded. The position of Mercury in a First-Trade chart is particularly worth noting, because it is associated with key communications related to the stock.

Mercury in the First-Trade horoscope is especially important when companies make announcements about their quarterly earnings. If Mercury is not strongly aspected at the time of an earnings announcement, the earnings report will not necessarily have a big influence on the price of the stock. But if First-Trade Mercury is strongly aspected when an earnings announcement is made, there can sometimes be significant earnings surprises, either positive or negative ones, depending on the nature of the planetary aspects that occur. The effect can be particularly strong when Jupiter or Saturn are involved, and the most significant earnings surprises can occur when an earnings announcement coincides with either a direct or retrograde station of one of these two planets, with the planet conjoining First-Trade Mercury.

It's worth noting, then, the times and zodiacal positions of Jupiter and Saturn stations, and then scanning your database of First-Trade horoscopes to determine which stocks have Mercury in a position to experience a conjunction with the stationing planet.

This effect on earnings announcements can be especially strong if Mercury is near the ascendant or the midheaven in a First-Trade horoscope, since the chart angles are especially sensitive points. But in every case, paying attention to Jupiter and Saturn stations that align with First-Trade Mercury at the time of an earnings announcement has the potential to open the door to profitable astro-trading opportunities.

Trading with First-Trade Mercury during earnings season can offer some real advantages, but they are limited because of the relative rarity of earnings announcements. But the usefulness of First-Trade horoscopes doesn't stop there. While there are many profitable applications of First-Trade charts in astro-trading, they are most often best used as base charts for evaluating the suitability of specific trades, whether or not earnings announcements are forthcoming.

In making that evaluation, the positions of transiting planets, secondary progressed planets, and converse progressed planets are observed, with special attention to their aspects to key points in the First-Trade horoscope, especially the chart angles as well as the First-Trade Sun and the First-Trade Moon. The primary resource detailing this technique is Bill Meridian's fine book on *Planetary Stock Trading*.

While it is not a substitute for that approach to First-Trade charts, the Mercury method illustrated in this chapter can also be applied to First-Trade horoscopes with good results. By putting a First-Trade chart on a 90-degree dial and moving the pointer to the Mercury position, the astro-trader can get a quick look at significant structures within the chart. If any of the activated midpoints include the key First-Trade planets or points, they will be especially important when they are triggered by transits or progressions.

Mercury Aspects and Angles

Mercury doesn't act in isolation in its connections with market trends and turning points. Some of its most powerful correlations with market behavior coincide with particular interactions between Mercury and other planets.

Traditional astrology puts a great deal of emphasis on specific angular relationships between pairs of planets, known to astrologers as planetary aspects. In the second century A.D. Claudius Ptolemy defined the most important aspects as the conjunction, with the two planets at the same degree of the zodiac; the sextile, with an angle of 60° between the two planets; the square, with a 90° separation between the two planets; the trine, with an angular separation of 120° ; and the opposition, with the two planets 180° apart.

Although Ptolemy's work with planetary angles became the basis for a key component of the astrological tradition in mediaeval times and in the modern world as well, astrologers in other eras have added to this set of Ptolemaic aspects some additional specific angular relationships worth noting, including the semisextile, a 30° angle of separation; the semisquare, a 45° angle of separation; the quintile, a 72° angle of separation; the sesquiquadrate, 135° angle of separation; the biquintile, a 144° angle of separation; and the quincunx, a 150° angle of separation.

More recent research in the financial applications of astrology has shown the importance of aspects from the ninth harmonic (multiples of 40°), the twenty-fourth harmonic (multiples of 15°), and the fortieth harmonic (multiples of 9°).

Although the planetary aspects give us convenient signposts in our study of dynamic planetary relationships, coordinating planetary cycles with the movements of the markets requires extensive empirical analysis which is unfettered by a blind adherence to astrological conventions. When we study the angular relationships of Mercury to other planets and look at their correlations to significant market actions, we soon discover that there are far more degrees of arc opening which are active in the markets than those described by the limited set of traditional astrological aspects, and even the more modern additions to the Ptolemaic aspects don't give us the complete picture.

We can thus take two approaches in exploring specific Mercury interactions with other planets as influences in the markets - we can either work with the traditional astrological aspects and back-test the activity of the markets we are studying when those aspects occur, or we can look at the price action of the markets themselves, identifying key turning points, and then observe which specific angular relationships occur at those important times.

When we begin with the traditional planetary aspects, we inevitably find that there are some cases in which clearly delineated shifts in market trend occur. But we also typically find many instances in which there seems to be little or no correlation between a specific Mercury aspect and a key reversal in the markets. When that happens, the best we can do is to determine the statistical probability of rate change in market direction when a particular aspect occurs. This is useful information when there is an extremely high or low correlation between the planets and the markets, but much of the time we wind up with data that has little use to us in pragmatic market forecasting or astro-trading timing.

On the other hand, if we begin with market analysis and then work our way back to a determination of the highest probability angles of separation between Mercury and other planets when noteworthy market activity occurs, we can sidestep many of the inconveniences of dealing with probabilities and focus our attention instead on the specific angular relationships that are most likely to correlate with significant market highs and lows. When we take that approach, the best strategy is to examine systematically Mercury's relationship with each individual planet in turn, coordinating repeated iterations of each complete synodic cycle with historical price data from the market we are studying.

As an example, here is what we have found in looking at Mercury's relationships with other planets in an analysis of price trends in the S&P 500. Because the cycles of relationship between Mercury and

other planets have varying durations, the number of examples that we have been able to examine in each instance also vary. But because Mercury itself moves so rapidly, and because we have an ample amount of data for the S&P 500 to examine, we have been able to reach some potentially useful conclusions about the connections between these Mercury cycles and key turning points in this stock index.

Mercury and the Moon

The Moon moves more rapidly than Mercury, so it is the active factor in determining the length of the cycle of angular relationships, except for some modifications when Mercury is near a station and is thus moving more slowly. Our analysis has shown that the S&P is most likely to reach a trading top when the angle of arc opening between the Moon and Mercury is 54° , with a trading low most likely to occur when that angle is 150° .

Although there is plenty of data on hand to back up this conclusion, it's nevertheless worth noting that since the lunar cycle is only approximately 28 days long we are unlikely to get major tops and bottoms in the S&P with every iteration of the cycle. There are times as well when the Moon/Mercury signals invert, with an expected high becoming a low and vice-versa. Even so, because of the likelihood of short-term trend reversals, it's worth noting these specific Moon/Mercury angles and flagging the dates that they occur when we do our monthly market analysis. If they coincide with other important astro-trading signals, they can be a useful confirming factor in our day-to-day trading decisions.

Mercury and the Sun

As an inner planet, one which orbits the Sun from within the orbital path of the Earth, Mercury will always appear near the Sun from our geocentric point of view. We thus have a limited range of possible angular relationships to consider in this case.

Our research has shown that highs in the S&P are most likely to occur when Mercury is approaching its conjunction with the Sun and is separated from the Sun by angles of 3° , 14° , or 22° , and also when it is departing from its conjunction with the Sun and is separated by an angle of 23° . On aggregate, then, we can look for the greatest probability of tradable highs in the S&P when Mercury is 22° or 23° away from the Sun, whether the angle is waxing or waning.

Lows in the S&P are most likely to occur when Mercury is moving towards its conjunction and is separated from the Sun by 18° or 25° , and when it is separating from its conjunction and has an angular relationship with the Sun of either 17° or 18° . The Mercury/ Sun angle of 18° is thus particularly significant in helping us to identify potential lows in the S&P 500.

Mercury and Venus

Venus also has its orbit within the orbital path of the Earth, so once again we are limited in the range of potential angular relationships that we can consider.

In all cases, however, the most significant action in the S&P seems to occur when Mercury is moving towards its conjunction with Venus. Potential highs in the S&P are most likely to occur with an angle of separation of 65° , and an angle of 40° between Mercury and Venus is the most likely to bring a trading bottom.

Mercury and Mars

When we get to Mars we begin our considerations of Mercury's relationship with planets outside the orbit of the Earth, so with Mars and with all the planetary bodies that follow we have the full 360° spectrum of potential angular relationships to consider.

Highs in the S&P 500 are most likely to occur with Mercury/Mars angles of 140° and 223°, as well as the degree areas ranging from 268° to 275° and from 290° to 303°. We can look for lows in the S&P 500 when there is a 117° angle of separation between Mercury and Mars, or during the degree ranges of 28° to 35°, 70° to 71°, and 183° to 184°.

Mercury and Jupiter

Jupiter is the planet of growth and expansion, so perhaps it's little wonder that we find a lot of correlations between Mercury/Jupiter angles and a high probability of tops and bottoms in the S&P.

The S&P is most likely to hit highs when the angular separation between Mercury and Jupiter is 24°, 96°, 165°, 248°, 300°, or 340°. We are most likely to see lows in the index occur when the Mercury/Jupiter angle is 196°, 218°, or between 44° and 45°.

Mercury and Saturn

Saturn is all about constriction and limitation, and there are noticeably fewer correlations between market highs and lows in the S&P 500 and the angular relationship between Mercury and Saturn.

When that angle is either 83° or 196° , we are the most likely to see tops in the S&P. We can look for lows in the S&P when the angular relationship between Mercury and Saturn is either 161° or 309° .

Mercury and Uranus

The correlation between Mercury/Uranus angles and the highs and lows in the S&P is even more clear-cut.

When that angle of separation is 67° , the S&P is most likely to hit a high. When it is 316° , we can look for a greater probability of a low in the S&P 500.

Mercury and Neptune

The S&P 500 is most likely to hit a trading top when the angle of separation between Mercury and Neptune is 90° . When that angle is either 226° or 293° , there is the greatest likelihood of seeing the S&P form a significant bottom.

Mercury and Pluto

When the angular relationship between Mercury and Pluto is 145° , we are most likely see a top in the S&P. When the angle is 296° , then we can look for a low in the S&P.

Mercury and Cupido

The angular relationships between Mercury and the transneptunian factors are also significant. The transneptunians are the hypothetical planets proposed a century ago by the German astrologer Alfred Witte; ideas about the potential impact of their interactions with other planets can be found in Witte's book *Rules for Planetary Pictures*.

Cupido is the innermost transneptunian factor, and when the Mercury/Cupido angle is either 106° or 193° , the S&P 500 has the greatest probability of reaching a high. When the Mercury/Cupido angle is either 305° or 341° , there is a likelihood of a low in the S&P.

Mercury and Hades

The angular relationship between Mercury and the transneptunian factor Hades is most likely to coincide with a top in the S&P when it is either 178° , 274° , or 354° . There is the highest likelihood of a low in the S&P 500 when the Mercury/Hades angle is 143° .

Mercury and Zeus

Mercury's angular relationship to Zeus seems to be particularly active in coinciding with significant support and resistance in the trading dynamic of the S&P 500.

When the Mercury/Zeus angle of separation is 71° , 169° , or 250° , we are most likely to see the S&P hitting resistance and forming a trading top. When the Mercury/Zeus angle is 356° , or when it falls in the degree range between 34° and 38° , we can look for evidence of support in the S&P and for the formation of trading lows.

Mercury and Kronos

When we find an angular relationship between Mercury and Kronos of 168° , 267° , or 345° , we are likely to see a top in the S&P 500. When the Mercury/Kronos angle of separation is either 91° or 134° , we are the most likely to see a low in the S&P.

Mercury and Apollon

The Mercury/Apollon separation is the most likely to coincide with a high in the S&P 500 when it is 55° , 151° , or 233° . We can look for a greater probability of significant trading lows in the S&P when the Mercury/Apollon angular separation is 338° , or when it falls between 22° and 23° .

Mercury and Admetos

The most significant angular relationships between Mercury and Admetos in terms of their correspondence with highs in the S&P are angles of 23° , 206° , 289° , and 303° . When the Mercury/Admetos angular separation is either 128° or 173° , we have the greatest probability of seeing lows in the S&P 500.

Mercury and Vulcanus

The S&P 500 is most likely to hit a top when there is an angular separation between Mercury and Vulcanus of 145° . However, when that angle is either 67° or 112° , we can typically expect to see a greater likelihood of a low in the S&P.

Mercury and Poseidon

The Mercury/Poseidon angles most likely to coincide with highs in the S&P 500 are 41° , 123° , and 193° . When the Mercury/Poseidon angle is either 9° or 321° , there is the greatest probability of our observing the S&P 500 forming a low.

A Couple of Practical Astro-Trading Reminders

In considering Mercury's angular separations from other planets and their potential relationship with significant turning points in the S&P 500, it's important to keep a couple of facts in mind.

First of all, the angular separations that we have described here are only statements of probability. While they will often coincide with reversal dates in the S&P 500, there are certainly many instances in which no such correspondence is evident or when the signals invert, and we get a high instead of a low, or a low instead of a high. Although these angular relationships can often give us a significant edge in our trading by improving our ability to spot higher-probability opportunities for market trend reversals, they don't coincide with expected shifts in market trend 100% of the time.

Secondly we must remember that even when these Mercury angles prove to be accurate, we shouldn't try to trade solely on the basis of the timing signals they provide. They are best applied as astro-trading tools when we combine them with other astrological and technical indicators. On the occasions when other market timing indicators suggest that a significant turning point is at hand, the consideration of these angular relationships between Mercury and other planets can provide us with additional confirmation for our trading decisions, allowing us to be more confident in entering our trades.

Remember as well that this research on the relationship between Mercury angles and tops and bottoms in the S&P applies only to that specific index. When we are trading individual stocks or commodities, or when we are considering other market indices, then we have to do the back-testing and analysis of those markets as well.

In other words, these examples with the S&P 500 are intended to serve as a model for the kind of analysis that can be applied to any market situation, as long as sufficient historical price data is available. It is only through careful observation and rigorous back-testing that we can reach conclusions about which angular relationships are the most important for any specific market, but once we have done that research, we then have a powerful tool to add to our decision-making process as astro-traders.

Mercury Retrograde

Once you get past the basic introduction to astrology, once you have learned what your Sun sign is and have explored the generic advice delivered by daily Sun sign horoscope columns, one of the first things that you learn about astrology is to beware of Mercury retrograde periods. These are the times when, as seen from the Earth's perspective, Mercury appears to be moving backwards in the sky. It's an optical illusion, of course, created by the varying speeds of planetary orbits around the Sun, but it's nevertheless a significant phenomenon, and one that we need to take into account as we consider Mercury's importance for us as astro-traders.

When Mercury is retrograde, according to the conventional wisdom, everything goes wrong. But even if we don't agree with the conventional wisdom, and choose not to buy into the superstitious notion that a retrograde Mercury inevitably means disastrous doom and gloom, we still have to deal with the phenomenon, and we can do so in creative and productive ways. When Mercury goes into retrograde motion it definitely gives us some challenges. But it also provides some advantages as well, and that's what we need to be aware of as astro-traders.

This phenomenon is not a rare occurrence, since Mercury goes into retrograde motion about three times each year. In fact, Mercury is retrograde roughly 18% of each calendar year, due to the fact that whenever it is retrograde it maintains its apparent backward motion for about three weeks each time. Knowing that Mercury will be retrograde 18% of the time reminds us of the Pareto principle, the famous 80/20 rule which tells us that we can get about 80% of our results from 20% of our effort. Based on this approximation of the 80/20 principle, the times when Mercury is in retrograde motion can actually be opportunities for us to work on the important decisions and preparations that help us be in positions of the greatest advantage during the remaining 82% of the year. As astro-traders, we can use Mercury retrograde periods to do the things that can give us an extra edge in our market activities when Mercury is in direct motion.

When Mercury is retrograde we inevitably confront a variety of communications challenges. We can also experience an impact on travel, with interruptions, inconvenient obstacles, or unexpected delays complicating our ability to get from one place to another. When Mercury is retrograde equipment can malfunction more than usual, with computers breaking down, copy machines failing to function properly, and internet connections getting lost.

Important documents that are signed when Mercury is retrograde, such as leases, contracts, and commercial agreements, often fail to work out as anticipated, and sometimes contain errors that escape our attention, but that would have been glaring under other circumstances. The caveat here is always to take the extra time to read the fine print in any contract that needs to be signed while Mercury is in retrograde motion. If we have to execute agreements while Mercury is retrograde then we certainly can choose to do so, but only after we have gone over the paperwork four or five times, had it checked out by an attorney, and done whatever else is necessary to add an extra margin of certainty and safety to the transaction.

With Mercury retrograde there are obstacles that occur both internally and externally, in our own consciousness and in the world around us. They can impact our personal ability to keep our heads straight in dealing with other people, and because of the necessary redundancy required for handling Mercury retrograde periods properly, it often takes us a great deal more time and effort to get less done than we might otherwise expect.

Mercury retrograde is also strongly associated with challenges in trade and commercial activity. That is one of the reasons we pay particular attention to Mercury retrograde cycles in the markets. But a Mercury retrograde period can influence the behavior of the markets in other ways as well. Not only does Mercury retrograde impact commercial activity itself; it can also influence global affairs and the potential for international tensions. These are the kinds of events that can impact war and peace issues,

international trade, expectations relating to the availability of critical raw materials, and other fundamentals which can influence market behavior. While we may not need to understand everything that's going on in the world completely in order to be effective in the markets, when Mercury goes into retrograde motion it gives us a clear signal that we need to pay closer attention to geopolitical affairs.

Educational and cultural activities are also impacted by Mercury retrograde periods, so we may need to make allowances in those areas as well. Whether we are trying to make plans, start projects, create projections, or are simply making an effort to push things forward, we typically have to contend with skewed results when Mercury is in retrograde motion.

Relationships at both a personal level and a professional level also come under pressure and can suffer substantially when Mercury is in retrograde motion. There are more misunderstandings and more miscommunication, and there is a strong tendency to generate more hard feelings than usual. Because that's the case, we may find that our personal levels of emotional balance and self-confidence also tend to suffer when Mercury is retrograde, and this kind of disturbance can impinge on our ability to move effortlessly through normal daily transactions.

This effect is especially important when we are actively trading in the markets. If as traders we are second-guessing ourselves or are getting confused about market directions, or if we are simply not completely at ease in the trading environment, our results are likely to suffer. We will, of course, feel the Mercury impact financially in those contexts.

One of the things that's particularly interesting about the Mercury retrograde phenomenon is that its effects can manifest in a surprising variety of ways. In some cases we can experience the Mercury retrograde impact quite directly and rapidly; in other instances the results take place more slowly and tangentially. At still other times we can see recurring effects of actions taken while Mercury is retrograde, with the recurrences plugging in to future Mercury retrograde cycles. As a way of illustrating this kind of Mercury retrograde influence, here's an example of my own decision-making process during a Mercury retrograde period.

A Sobering Lesson

It was one of my most memorable Mercury retrograde experiences; it occurred a couple of decades ago when I got a late-afternoon phone call from my father. He had decided to trade cars, he told me, and was at that moment at an automobile dealership which had offered him a wonderful deal on his next motor vehicle acquisition. In his negotiations with the car dealer there was an option on the table which would give him a generous trade-in allowance for the car he was currently driving, a fairly new Peugeot sedan with substantially less than 50,000 miles on the odometer.

But, my dad informed me, he had remembered that the car that I was then driving was literally on its last legs, barely providing me with basic transportation, and very much in need of replacement. So, my father said, if I would be willing to purchase his nearly-new Peugeot for a sum that was somewhat less than the trade-in allowance he was being offered, he was willing to make that happen and renegotiate his pending deal, making up the price difference out of his pocket in order to put me behind the wheel of a more serviceable vehicle.

There was only one catch. Time was of the essence, my father insisted, and the whole proposition had to go into effect that same day if it was to be accomplished at all. It was a take-it-or-leave-it offer.

I glanced at my astrological calendar, and saw, as I was already well aware, that Mercury was in retrograde motion at the time. Remembering the textbook warnings about making important purchases with Mercury retrograde I hesitated, about to decline his generous offer. But then I had second thoughts.

I did in fact need a new car. The offer of the Peugeot was an upgrade that far exceeded my previous expectations about coming up with a replacement vehicle. And after all, I reasoned, this was a car that

my father had purchased new and then taken good care of, with documented records of all the regular maintenance that had been required.

It was clear to me that this was an extraordinary opportunity. I knew that Mercury was retrograde, but if I couldn't trust my own father in a situation like this, then who could I trust?

I gritted my teeth, made a quick decision, and agreed to meet my father within the hour take care of the necessary paperwork. Several hours later I was ensconced behind the wheel of my nearly-new Peugeot, opening the moon-roof and breathing the fresh air as I observed the radiant Moon itself on my drive home in the darkness.

The Peugeot gave me a great deal of delight. I enjoyed riding along in comfort and loved the welcome contrast it provided to the noisy rides I had tolerated in the rickety clunker that my new car had replaced. I was pleased by the reactions of my friends and colleagues, who were effusive in their admiration of the fact that I was now driving a much classier car than I had been accustomed to.

Everything went smoothly for the next several months, and I soon banished all memories of the apprehensions I had originally felt about negotiating an important purchase while Mercury was retrograde.

But then something happened. The air conditioner on my almost-new Peugeot stopped functioning.

I took it in for repair at a shop run by a reliable and trustworthy mechanic, a Romanian who specialized in keeping European cars going. He did a diagnosis, and told me what it would take to get the cooling system running again. It was a more costly repair than I was really prepared to handle at the time, but I decided to bite the bullet and go ahead with it. And while the car was in the shop, I realized that Mercury was retrograde once again.

I managed to make ends meet while taking care of this unanticipated expense, and once again forgot about the Mercury retrograde dynamic as I plunged back into my exhilaration at driving a really nice car. This high state of ecstasy persisted for a few more months as I drove around, running errands and going to appointments, taking great pride in the fine vehicle that I had been blessed with. But just like clockwork, Mercury went retrograde again, and once again my Peugeot was in the shop for major repairs.

It didn't take too many more iterations of this cycle for me to comprehend the dilemma that I had unwittingly embraced. Every time Mercury went retrograde, my classy new vehicle suffered some expensive debilitation. After five or six of these episodes, I made the tardy but inevitable decision to part company with my prized Peugeot. I was still on speaking terms with my father, and we never discussed the Mercury retrograde factor in my purchase of the car, but I knew in no uncertain terms that I needed to pay attention to astrological dynamics in spite of my desire to honor the bonds of blood and paternal generosity.

It was a difficult and sobering lesson, to say the least. It certainly demonstrated the validity of a major astrological caveat - never buy a vehicle when Mercury is retrograde, no matter how much you know about the car and how trustworthy the source may be. But it was also important to me individually because it marked the time when I made a personal commitment to become a professional astrologer. After all, based on my own somewhat painful personal experience, I had learned that astrology really works!

I mention this personal incident not just because it is an example of the strange and potentially disastrous effects that can occur with Mercury retrograde, but also because it illustrates some key principles about the Mercury retrograde phenomenon that we can transfer to our experiences as astro-traders. To begin with, it focuses on a critical notion which we need to keep in mind if we are going to be effective in dealing with Mercury retrograde periods in the markets - when Mercury is retrograde, we need to be especially cautious about trying to find exceptions to the rules.

That's what I was doing when I made the decision to purchase the car while Mercury was

retrograde, even though I knew that this particular Mercury phenomenon was supposed to have an effect on contracts and transportation. When Mercury is in retrograde motion, we sometimes look for all kinds of justifications and rationalizations for ignoring our trading rules, and if we succumb to that seduction we can experience devastating results.

Whether we are simply second-guessing ourselves in our market analysis, or whether we are taking trading positions that are too large or ignoring market signals that are telling us to get out of a trade or to adjust our stops, we are unnecessarily increasing our risk. If we feel that we can profitably allow ourselves an exception to our trading rules while Mercury is in retrograde motion, we are typically making a very big mistake.

A Business Disaster

In one sense, that desire to find exceptions to the rules is what Ford Motor Company was experiencing in 1957, when it announced that it was introducing a new line of automobiles.

Throughout the summer months of that year, Ford ran an advertising campaign based on mystery and intrigue. Rather than following the industry norm of promoting the great new features and benefits to be found in their upcoming product introduction, Ford chose instead to try to build consumer buzz by hinting that something really big was on the way, without explicitly revealing what it was.

Ford's magazine ads showed blurred pictures of an unidentifiable car speeding by, announcing that "Lately, some mysterious automobiles have been seen on the roads."

When the new cars were shipped to Ford dealerships across the country, they were all covered by tarps on the transport trucks, so that no one could see what they really looked like.

The Ford dealers were all sworn to absolute secrecy, with the promise that they would not in any way reveal the new line of cars until the actual day of the product launch.

That date was proclaimed in advance as E-Day, short for Edsel Day - September 4, 1957. At the appointed time on E-Day, all the Ford dealers in America simultaneously unveiled four models of the new Edsels to a curious public in a coordinated launch of grand proportions.

The Edsel definitely stood out from other automobiles. It was a big, fancy car with dramatic fins in the back and one truly distinguishing feature - a strange oval-shaped grill mounted vertically on the front of the vehicle.

The immediate response was that the car looked weird! One automotive commentator quipped that the Edsel looked like an Oldsmobile sucking a lemon, while another countered that it really bore more resemblance to a Pontiac pushing a toilet seat.

Nevertheless, the Edsel created quite a stir. A telegram sent to Ford corporate headquarters in the early morning hours of September 5, 1957, from L. F. Jarrett, the owner of Ford dealership Jarrett Motors in Albany, New York, testified to this fact. Addressed to N. K. Vanderzee, the Assistant General Sales Manager of the Edsel Division at Ford Motor Company in Dearborn, Michigan, the telegram read:

EDSEL SHOWING BEST EXPERIENCED IN PAST 30 YEARS. MORE THAN 4,800 PEOPLE IN ATTENDANCE. CARS PARKED DOUBLE FOR THREE CITY BLOCKS. TEN SALESMEN UNABLE TO PROPERLY HANDLE CROWDS. LITERATURE EXHAUSTED BY TWELVE NOON. HAVE DELIVERED FROM STOCK TWO CITATIONS, TWO PACERS, ONE CORSAIR, ONE BERMUDA. ENTIRE ORGANIZATION MOST ENTHUSIASTIC BUT COMPLETELY EXHAUSTED. EXCELLENT PROSPECT OF WRITING FIFTEEN ORDERS NEXT FEW DAYS.

By all outward appearances, the Edsel introduction was a smashing success. But what Mr. Jarrett did not understand was the real set of numbers that the company had in mind. On E-Day he had sold a total of six new Edsels, but that outstanding sales day didn't measure up to the company's expectations.

The Ford Motor Company had become so convinced in advance that it had an absolute winner with the Edsel that it not only released four different models of the new car; it created an entirely new division of the company exclusively to manufacture and distribute the Edsel, spending vast amounts of money in the process.

But the big expenses weren't going to be a problem. The company's number crunchers had come up with an astonishing sales projection - each dealership would sell this wildly popular new car at an average rate of four units of each of the four models per day. With 12,000 Ford dealerships across the country selling 16 cars every day, the sales projections were astronomical.

L. F. Jarrett at Jarrett Motors in Albany, a seasoned veteran in the car business, was overwhelmingly enthusiastic about having sold six units on the opening day, when the crowds were backed up for blocks hoping just to get a glimpse of the new mystery car, and he optimistically figured that he could probably sell 15 more cars during the next several days. He was very happy with those numbers, but the company hadn't told him what its sales expectations actually were.

Edsel Introduction

Sure enough, the horoscope for that historic product launch on September 4, 1957 had Mercury in retrograde motion at 21°51' Virgo. In examining this horoscope, however, we not only note the position of retrograde Mercury, but also the position of Saturn, which was at 8°07' Sagittarius at the time. As it turned out, this Saturn position was to become especially significant in the story of the Edsel.

There continued to be strong publicity for the Edsel during the first few days following its introduction, but sales soon began to lag.

It didn't take long for it become apparent that nobody really liked the weird new car, and very few people were actually willing to buy one of the strange-looking gas guzzlers, especially since Ford's competitors were introducing smaller, more fuel-efficient models.

Ford brought out its new 1959 line of Edsels in September, 1958, and the sales numbers were still tepid. Even though Ford's publicity department put out the word proclaiming the outstanding success of the original Edsel models, the public apparently wasn't convinced.

Another year went by; in September 1959 the 1960 Edsels were unveiled, and Ford's advertising included games and puzzles which encouraged prospective buyers to guess what great new features the latest models were going to have. But that was to be the end of the line for the Edsel.

End of the Edsel

On January 27, 1960 a letter went out from Divisional Sales Managers of the Ford Motor Company to Ford dealers across the country, explaining that anyone who had purchased a 1960 Edsel prior to November 19, 1959 could get a \$300 rebate on their Edsel if they wanted to trade it in a for a different Ford car. The company instituted a certificate program with its dealers to provide the rebates on the trade-in, because as of November 19, 1959 Ford had decided to cut its losses and stop all future production of the Edsel. The company had lost more than \$400 million on the Edsel debacle, roughly equivalent to \$3 billion in today's currency.

What's noteworthy here is that on November 19, 1959, when the Edsel was discontinued, transiting Mercury, once again in retrograde motion, had moved to conjoin the position of Saturn in the E-Day horoscope for the Edsel introduction. Mercury had crossed that Saturn point before that time, but the first time it did so in retrograde motion was on the day the Edsel died.

Flash Crash

While the Edsel story is a sad tale of a large-scale business disaster under the influence of Mercury retrograde, it is certainly not the only time that this planetary phenomenon has had a noticeable impact on business activities. A more recent example that directly relates to the markets was the case of BATS.

That acronym originally stood for Better Alternative Trading System. The firm, operating simply as BATS, provided computer processing for stock market transactions, and originally met with big success, growing to the point where it was handling approximately 11% of all market transactions through its clearinghouse operation.

Based on its success, BATS decided to have an Initial Public Offering, putting shares of its stock on the market on March 23, 2012. The shares were first made available at 10:30 a.m. that day, with Mercury retrograde. This is a particularly interesting horoscope because at the time of the IPO, Mercury was at 29°57' Pisces. Just minutes prior to the opening bell that day, transiting Mercury moved backwards over the 0° Aries point in the zodiac; Mercury had been moving retrograde through Aries prior to that, and at virtually the exact time of the BATS IPO it crossed this key cardinal point in the zodiac. From an astrological perspective this is an extremely important zodiac point, but in this case it's particularly noteworthy because of the broad influence of the role that BATS plays in processing market transactions.

Koch
True Mode

The BATS IPO began with great fanfare, but about 15 minutes later some strange things began to happen with the flow of trade transactions. Erroneous trades began to go across the wires.

The stock of Apple Computer (AAPL) had been trading at \$598 a share that morning, but within a matter of seconds Apple shares plunged from that price range and were being exchanged at just a little bit above \$540 a share, with the company suddenly experiencing a 9% drop in value for no apparent

reason.

Something very unusual was going indeed on. In fact, the computer servers being run by BATS itself, a firm which managed computerized trade transactions as its business and which had just launched its IPO based on its outstanding record of reliable performance, were massively malfunctioning.

For some unexplained reason, the BATS computers were garbling the trade data for every company whose trading symbol began with the letters A or B. So BATS had no choice but to shut down its own trading system on the day of its IPO. That event triggered what became known as the BATS Flash Crash at 10:57 a.m.

At 12:15 that afternoon, BATS announced that it was withdrawing the IPO. The BATS stock had originally been priced by the offering agents at approximately \$15 per share, but at this point on March 23 the asking price had fallen to two one-hundredths of a cent per share, which meant that you could buy 5,000 shares of BATS stock for one dollar.

The BATS disaster certainly illustrates the power of Mercury retrograde in the markets. But it is an especially strong example because of Mercury's alignment with the 0° Aries point, triggering the full force of the cardinal axis.

More importantly, the stock for Apple Computer has an especially strong relationship to the cardinal axis, as is revealed by a quick look at Apple's First-Trade horoscope on the 90-degree dial.

Without going into too much detail, simply note that the dial's pointer is aligned with the Aries point, while all of the horizontal lines across the dial perpendicular to the Aries point axis identify midpoint structures that connect planets in the chart with the cardinal axis.

AAPL
New York, NY
Dec 12 1980
10:00:00 AM EST

That's one of the reasons that Apple is such a powerful company - the cardinal axis signifies strong connections on a global scale, and Apple clearly has a global influence. So when the BATS Flash Crash was triggered by Mercury hitting the 0° Aries point, the impact on Apple was especially severe. In fact, it was the big drop in the price of Apple's stock itself that initially caught the attention of traders when the BATS computers began to malfunction, alerting them to the fact that something was wrong with the overall order flow.

Retrograde Strategies

As astro-traders, our aim is to be able to move past the possibilities of being victimized by Mercury retrograde distortions, so that we can use this part of the Mercury cycle creatively and productively. As we pursue that goal, we need to deal with the Mercury retrograde phenomenon from two different perspectives - an internal one and an external one.

With the internal component, we are concerned with our own consciousness, with what's going on inside our heads and the effects of our own thoughts as we go through the Mercury retrograde experience. The external component is simply the realm of phenomena that we experience outside ourselves, in the markets or in the world at large. In order to deal with Mercury retrograde periods profitably, we need to take both perspectives into consideration.

The Internal Component

We can gain a much richer appreciation of the inner component if we use what might be called a practical esoteric approach, one that combines esoteric understanding from the ancient wisdom with pragmatic skills and strategies that can help us function more effectively in the contemporary world. The basic idea in this perspective is that if we really want to understand what Mercury retrograde is doing in our lives and with our finances, or if we want to be more effective with our trading while Mercury is retrograde, then we need to begin with a clear understanding of who we are as human beings.

The esoteric notion is that one of our defining characteristics as human beings is that we each have multiple visible and invisible bodies which are intimately and intricately interconnected, with the functions and characteristics of each of our bodies informing and vitalizing the others. As we more fully understand those connections, we can gain greater insights into the real way that are responding to a variety of circumstances, including the times when Mercury is retrograde.

At the grossest, most obvious level, we as human beings have a physical body. It includes an auric field, an energy body that surrounds the concrete observable form of the body that's made of bone, muscles, organs, and skin. This energy body plays a key role in many alternative healing modalities, and can be dramatically revealed with Kirlian photography. But it's really a part of the physical body itself.

Beyond the physical body we also have an emotional body. This typically extends beyond the bounds of the physical body, surrounding the physical body and creating a unique type of energy field as it does so. Since it's not itself physically observable, the best way to comprehend the emotional body is by observing its influence instead. For example, if we walk into a room where two people have just had a violent argument, we can sense an uneasy feeling in the room, even if the participants in the argument are now sitting quietly when we come into the room. The remnants of the angry energy are still swirling around in the room, and we can feel the unsettled state of affairs immediately. When that happens, we are actually connecting with the residual turbulence of the individuals' emotional bodies, which is giving us information that's not being revealed by the physical bodies at the time.

We also have a mental body that extends a bit beyond our emotional bodies. It is a subtle articulation of our capacity for thought, including both concrete thought, which gives us the ability to relate to specific people, places and things; and abstract thought, which gives us the ability to relate to numbers, arcane mathematical concepts, and the impulses of inspiration and intuition.

Beyond the limits of the mental body there is the realm of spirit, and depending on our individual spiritual evolution and the spiritual disciplines we engage in, we also have capacities for connecting with that realm. Our spiritual body extends far beyond the sphere of the physical body; it is what gives us a sense of a higher purpose and allows us to experience personal connections with the cosmos.

Although this is a simplified description of the esoteric understanding of human beings, it's useful because it gives us a frame of reference for considering the internal perspective in getting the best from our Mercury retrograde experiences. Within that frame of reference, we can develop some important

postulates about Mercury retrograde and its effects, and gain some insights that can help us master ourselves as traders.

First of all, we can conclude that Mercury retrograde periods have some sort of spiritual purpose, if only because they give us challenges and life lessons that can strengthen our spiritual fortitude. Ultimately, however, spiritual understanding is a highly personal matter, so the best approach to the spiritual function of Mercury retrograde is most likely an agnostic one. In other words, if Mercury retrograde periods have a spiritual purpose, we may not be able to figure out exactly what that purpose is, and we can essentially be content with our lack of specific knowledge. We can simply go through our Mercury retrograde experiences to the best of our ability, trusting that they aid us spiritually in some way.

While maintaining spiritual balance is one of the most powerful strategies for enhancing personal effectiveness in the markets, in the context of our focus on Mercury what is even more important for us as astro-traders to understand is the key role played by the mental body. It is through our mental bodies that Mercury retrograde periods make their biggest impact on our lives and on our trading.

But the ultimate impact of retrograde Mercury is a dynamic process that doesn't stop with the mental body. Although Mercury directly affects the mental body, the mental body doesn't operate in isolation; it is connected on the one hand to the spiritual body, and on the other hand to the emotional body, and those connections hold the key to our personal experience of Mercury retrograde periods as viewed from the internal perspective.

If our livelihood or lifestyle has spirituality as its central focus, Mercury retrograde periods tend to amplify our spiritual practice and development. When Mercury is retrograde we can spend more time in prayer and meditation, or in following other spiritual disciplines compatible with our chosen spiritual path. Under those circumstances Mercury going retrograde can hardly be seen as a negative experience; it may actually be something that we welcome instead.

But most of us don't lead monastic lives, so we don't get much opportunity to take advantage of the potential spiritual connections that are offered us during a Mercury retrograde period.

Especially if we are active traders, we are typically much more focused on the world of commerce and communication, on issues and advocacy in public or private arenas, and on the endless stream of transactions in the mundane realm. We're engaged with fluctuations in market trends, with economic forecasts, and with issues relevant to our personal and financial security. And because that external engagement will in many cases pull us away from a spiritual focus, the Mercury retrograde energy tends to move instead from our mental body into our emotional body.

That's where the potential problems begin for us as astro-traders. Trading is primarily a mental body activity, and if we allow ourselves to be drawn into a stronger connection with the emotional body when Mercury is retrograde the mental influences can contribute to emotional imbalances.

It is in our emotional bodies that we are the most likely to experience frustrations and suffering. In extreme cases the thought forms which have moved from the mental body into the emotional body will trigger such strong responses that they are transferred to the physical body as well, manifesting as illness or fatigue.

In any event, an imbalanced emotional state will act consistently and reliably to restrict the flow of money in our lives, and with the emotional echoes and repercussions that usually accompany a cash flow inhibition we can start to become more anxious or even fearful.

Fear, of course, is one of the emotional engines that drives the action in the markets, with greed being the other prime emotional mover. If we are personally balanced in our ability to deal with fear and greed, we are much more likely to tune into the messages of the markets more precisely, and to enjoy the fruits of our trading efforts.

When Mercury is retrograde, however, it is typically far more difficult to keep the interplay of fear

and greed in balance. That's when we are more likely to make foolish or illinformed financial choices, and to make costly trading mistakes.

The key point for us to keep in mind as we consider the internal component of our Mercury retrograde experiences is that while we can encounter the effects of Mercury retrograde in all our bodies and at all levels of our being, the primary point of access for Mercury is through our mental body. Mercury is, after all, mainly connected with the functions of the mind, and so its energy is specifically directed at this part of our being. Even though this makes the mental body more vulnerable when Mercury is retrograde, it also gives us a hint about some effective strategies for managing the inner component of our encounters with Mercury in retrograde motion.

Particularly in our trading, if we want to keep our emotional bodies in balance, we need to engage the mental component rather than trying to connect directly with the emotions themselves. Ultimately all of our emotions have mental roots, so if we pay proper attention to our mental bodies, our emotional bodies are much more likely to take care of themselves and stay balanced and resilient, whether or not they feel any direct effect from the current activities of the mental body.

In practical terms, we can affect our mental bodies directly and voluntarily simply by choosing what we think. Our mental bodies are unique in that they can respond to the conscious choices that we make.

We may not be able to choose the hormone levels or heart rate in the physical body, and we may not be able to control the spontaneous feelings of fear or disgust that pump through our emotional bodies when we unexpectedly confront threatening or unpleasant circumstances. But simply by choosing our thoughts we can begin to regulate our mental activity, and when our mental bodies are functioning properly we are much more likely to get positive results in every other part of our experience.

That connection with the mental body is the core understanding behind the use of affirmations in the New Thought movement. It is the secret to the success of a variety of meditative practices. It is the basis of therapeutic and self-empowerment disciplines like Neuro-Linguistic Programming and Energetic Life Balancing.

But regardless of the specific approach that we take to the process of thinking or of the particular mental methodology that we employ, the conclusion is the same: in the markets or in other areas of our lives, we can change the results we get by altering what we think and how we think about it. If we're not happy with what we're feeling in any situation, or with the results we're getting in our trading, it's ultimately the mental dynamic that's at fault.

As Dr. Michael Ryce put it so succinctly in his book *Why Is This Happening To Me ... AGAIN?!*, "If you keep thinking what you've always thought, you'll keep getting what you've always got."

This understanding is especially important when Mercury is retrograde, since those particular occasions give us unique opportunities to interrupt the patterns in our lives, choosing different thoughts and different results.

The External Component

But even though the internal dimension provides a major arena for Mercury retrograde to make its influence felt in our lives and in our trading, there is an external component as well, in the world outside our skin.

As I learned when I purchased my Mercury retrograde Peugeot, things do sometimes go wrong, and there does seem to be an uncanny connection between Mercury retrograde periods and a variety of breakdowns, especially when transportation or communication are concerned. So if we are going to develop really effective strategies for dealing with Mercury retrogrades in the context of our trading, we would do well to take this external component into consideration.

Based on the mythological depiction of Mercury as a messenger and on continuing observation of the

Mercury retrograde phenomenon, it's perhaps easiest to see the influence that Mercury can have on the communications process.

Even so, we face a challenge when we try to define exactly what communication is, since it always seems to have subjective dimensions as well as objective ones. I may feel that I know what communication is all about, but you may not agree with me, especially if you feel that I'm not communicating effectively with you to start with! And if we can't come up with an unequivocal and measurable understanding of communication itself, what hope can we possibly have of comprehending and measuring the impact of Mercury retrograde periods on the communications process from an objective point of view?

While a satisfactory definition of communication may be elusive, a good starting point is the mathematical model of communication proposed by Claude Shannon and Warren Weaver in 1948. Their classic model breaks down communication into its simplest components.

According to this model, the two key participants in any communication are the sender and the receiver, with the sender sending a message or signal along a channel and the receiver getting it on the other end. But if the flow along the communications channel only goes in one direction, from the sender to the receiver, we can't be sure that the message is really going through. That's why Shannon and Weaver added a reverse channel, a feedback loop, to their model, to allow for confirming signals to travel in the opposite direction, from the receiver back to the sender.

While Shannon and Weaver's mathematical model of communication in this most basic form certainly helps to simplify and clarify our understanding of processes that may otherwise seem too complex, our initial diagram of the model lacks one feature that Shannon and Weaver included in their work more than 60 years ago: the element of noise.

The addition of this feature made the Shannon/Weaver communications model much more robust, because it could now describe situations in which communications broke down, as well as instances in which the desired connections and information flow were being achieved.

"Noise" was the technical term that they used to describe any and all factors which could interrupt or distort the communications process. We ordinarily use that word to describe certain kinds of sounds which may have unpleasant qualities and which interfere with peace and quiet or which make it difficult for us to hear other, more desirable sounds.

But for Claude Shannon and Warren Weaver, noise was anything that caused a disconnection anywhere within the complete communications loop in their model, either along the sender/receiver channel or along the feedback channel. With this definition, noise may or may not be auditory; while it may come in the form of unpleasant sounds, it can also be an interruption of visual content, a burst of electronic static that scrambles a wi-fi connection, or anything else that keeps message signals from flowing freely along a communications channel.

It is precisely that broader definition of noise, presented within the context of a simple functional model of communication, that gives us an objective way of codifying the role that Mercury can play when it is in retrograde motion.

Mercury retrograde increases the amount of noise in any communications system, whether we are dealing with a flow of electronic data or with face-to-face interactions between articulate human beings. With a Mercury retrograde period in effect, we can anticipate breakdowns in the main channel of communication, distortions in the feedback loop, and the expenditure of a lot of ancillary energy without there necessarily being any additional results to show for the extra effort.

Needless to say, the introduction of Mercury retrograde noise into the daily market mix of bid/ask spread quotations and order flows can complicate things considerably for any would-be trader - the BATS IPO example gives us a good idea of just how extreme the disruption can actually become.

But because the Shannon and Weaver communications model allows us to identify the role that retrograde Mercury is playing so clearly, we are also able to suggest some specific strategies for coping with the external component in the Mercury retrograde experience.

After all, when noise disrupts any communications system, there are only a limited number of courses of action that we can pursue if we want to change what's going on - we can weaken or eliminate the noise or the source of the noise, we can strengthen or otherwise modify the message signals that are being transmitted, or we can add redundancy to the system by opening up additional channels to allow for a greater likelihood that messages in the system can be accurately sent and received.

To be effective when Mercury is retrograde, then, our task is to open up more channels of communication as we increase the amount and frequency of the feedback in the systems we are using.

In practical terms for us as traders, this can mean creating additional brokerage accounts, so that if one of our connections to the market fails we can communicate orders through an alternative process. It also suggests the wisdom of bringing some redundancy into our ways of monitoring the markets, so that we're not dependent on a single data source, and of connecting with our data sources more frequently to verify and fine-tune the impressions we are getting about the tenor and trend of the markets we are observing.

A Synthetic Approach

Ultimately, however, our most effective strategy for active participation in trading while Mercury is retrograde is to craft an approach which combines the internal and external components of the Mercury retrograde experience. Rather than trying to figure out whether Mercury retrograde distortions are taking place because of our own lack of vigilance about our mental processes, or because of extra noise impacting the objective systems of communication that we rely upon, it's much better if we become proactive and take care of both the internal and external components simultaneously.

While Mercury is retrograde, we can look for improved outcomes in our trading and in our lives if we maintain the kind of mental discipline that obliges us to be very careful with our thoughts, our language, and our attitudes, making sure that they are aligned in ways that can allow us to receive and transmit information clearly and effortlessly. Whether we are using affirmations, self-hypnosis, advanced meditation techniques, or some other method for maintaining that mental balance and alignment, we need to make our mental management practices and spiritual disciplines an especially high priority while Mercury is retrograde.

At the same time, we can add to our effectiveness even more if we take aggressive and practical steps to open up new communications channels and to increase the information flow and feedback we are getting while Mercury is retrograde. Ideally these mechanisms should be in place whether Mercury is retrograde or not, putting us in a position of simply having to tick off boxes on a checklist whenever a Mercury retrograde period begins. But even if we wait until Mercury goes retrograde before adding more redundancies to our trading operations, it's still worth doing.

An 18% Game Plan

As we've noted earlier, the 18% of each year that Mercury is retrograde gives us some unique opportunities to strengthen our advantages as astro-traders. While we can certainly benefit from giving attention to the internal and external components that we've just reviewed, there are even more specific Mercury retrograde strategies that we can pursue profitably whenever the messenger of the gods starts back-pedaling. While they are mainly concerned with the external component of our engagement with Mercury retrograde, they also have implications for the inner component as well. We'll look at each of them from the astro-trading perspective, but in most cases the general underlying principles behind each strategy can be applied in other parts of our lives as well.

Re-Energize

First of all, we want to re-energize ourselves when Mercury is going retrograde. Ideally this is something that we should do before the retrograde period starts. Because we can anticipate Mercury retrograde periods well ahead of time, and because we are knowledgeable about the obstacles and complications that we may encounter while Mercury is retrograde, we want to be sure that we are in a peak energy state before the retrograde period begins.

As Vince Lombardi once observed, "Fatigue makes cowards of us all." So if we don't have an optimum personal energy level, if we're too tired to accomplish anything, or if we're not dedicating all our physical and internal resources toward the discipline of successful trading, we will be missing out on an opportunity to use the Mercury retrograde time most effectively. But we can expect to collect big dividends if we make sure to gather our resources, to recharge our physical and psychological batteries, and to re-energize ourselves in every other possible way before Mercury's retrograde station, which marks the time that the Mercury retrograde period begins.

Refocus and Regroup

Our second Mercury retrograde strategy is to refocus and regroup. We begin by taking a look at what our specific goals are, both in our short-term trading and in terms of our longer-range personal and financial objectives. What do we hope to accomplish while Mercury is retrograde, and how do those plans fit in with our bigger objectives? Do the goals we have previously set still make sense for us under the current circumstances? If the conditions around us have changed in significant ways, we may need to reconsider our goals.

It's never a good idea to put our energy into directions that aren't congruent with where we really want to go, but if that's what we're doing while Mercury is retrograde, we compound the disadvantage. But if we are still dedicated to the goals we have previously set for ourselves, and if we know that persistent incremental actions in pursuit of those goals will ultimately give us the results we want, we can approach the Mercury retrograde period more confidently, recognizing that our progress may be a little slower than we would like, but understanding that a little extra effort and an extra dose of patience will pay off for us in the end.

Revisit

When Mercury is retrograde we have an opportunity to revisit previous experiences. We can go back and take a fresh look at what we've done before in our encounters with the markets. As we do so, we can explore what has worked well for us in the past. This is especially appropriate when Mercury is retrograde; rather than trying to launch new projects or to come up with innovative new trading ideas, we can focus instead on the things we have done in the past that have produced profitable results for us.

If we discover a particular trading strategy that has worked well previously but that has more recently been neglected, we can try it again when Mercury is retrograde, knowing that it's a safe time for us to revisit that approach, because we won't be pushing the envelope in an effort to stretch our capabilities beyond their normal limits.

Review

We've already noted the importance of careful review when we're dealing with contracts and negotiations during a Mercury retrograde period. That's also an appropriate caveat when we're involved in trading. When we enter a brokerage order online, for example, it's all too easy with Mercury retrograde to get a little careless and click the mouse to confirm our order, erroneously assuming that the numbers on our computer screen accurately reflect our real intentions for the trade, only to discover a moment later that we've purchased 10,000 shares instead of 100 shares, or that we have taken a long position when we meant to sell short. Taking a little extra time to review our trading actions and decisions carefully can save us a lot of grief when Mercury is retrograde.

Research

As W. D. Gann so accurately observed, "Money comes through knowledge." As a trader Gann was quite attuned to astrological cycles, and he was one of the most successful traders of the first half of the Twentieth Century. He was quite clear as well that there are certain times when a trader should step away from the market altogether and refrain from active trading. He followed that rule himself, knowing that when there were particular astrological transits to his natal horoscope his probability of success in the markets was greatly diminished.

But even though W. D. Gann didn't trade during those times, he didn't stop working altogether. Instead, he used those times to expand his research into market patterns and astrological phenomena. He was actively engaged in reading and study, and in exploring ever-deeper levels of the long-term cycles in

the markets, but he wasn't actually putting his money at risk. Mercury retrograde periods offer us a perfect opportunity to emulate Gann's behavior. We can do our research while backing off from active astro-trading, using the time to collect new data and to become better prepared for decisive action once Mercury has resumed direct motion.

Revise

What do we need to change in our trading behavior? When Mercury is retrograde, we may want to revise our trading systems and strategies, but if we make that choice we always need to do so in the context of a rigorous examination of the data that we've accumulated about our previous performance in the markets. We don't make revisions without having all the necessary data in hand, or without reviewing it meticulously.

If we are employing this particular strategy while Mercury is in retrograde motion, we need to determine whether or not something has been successful in the past and then thoroughly back-test any possible revisions before we decide to tweak our trading methodologies. If we are conscientious and systematic in making revisions, a Mercury retrograde period can be a good time to make adjustments that can enhance our effectiveness as astro-traders.

Repair

Mercury retrograde periods also offer us a chance to repair the elements in our trading program that aren't functioning as they should. We may need to deal with a malfunctioning computer monitor, or we may need to clean up some glitches in our database of First-Trade horoscopes. If we've been putting off getting things fixed, we have an excellent opportunity to remedy the situation when Mercury is retrograde.

While we may not want to implement all of these strategies each time that Mercury goes into retrograde motion, they do serve as a reminder that we need not feel helpless when Mercury is retrograde. There are productive things we can do that will help us move forward in our progress toward astro-trading success, even if we encounter some obstacle along the way. And, if we employ any of these specific Mercury retrograde strategies at the appropriate time, we are also taking very practical steps toward keeping the channels of communication open and assuring reliable feedback from our market experiences, reducing the potential impact of the Mercury retrograde noise as we do so.

If we modify our trading activities to take full advantage of the opportunities that Mercury retrograde periods offer us, we can be more confident that we are mastering ourselves as traders as we simultaneously move toward mastery of the markets and of our trades.

The Empirical Advantage

There are, however, additional factors that we need to consider when we deal with Mercury retrograde and the markets. While we know that we as traders will meet challenges and opportunities during this part of the Mercury cycle, it's also useful to look at the behavior of the markets themselves when this phenomenon is in effect.

Although we can speculate about generic Mercury retrograde effects in the markets, using astrological symbolism to invent hypotheses about how stocks and commodities will behave when Mercury is retrograde, that kind of approach ultimately has little real value. It doesn't give us the kind of confidence we need to incorporate astrological principles and perspectives into our real-world trading, and it burdens us with unnecessary and often inaccurate preconceptions as we consider risking our money in the

markets.

A much more useful approach is to examine historical market data, looking for patterns that have occurred in association with Mercury retrograde periods. While past market performance is never a guarantee of future market behavior or results, we can at least be reasonably certain that if the Mercury retrograde phenomenon has not had an appreciable effect on a particular stock or futures contract in the past, it's not likely to do so in the future.

With that premise in mind, our team at Financial Cycles Weekly has launched an intensive study of major market indices, precious metals, international markets, and blue chip stocks, assembling all the historical data that we could get our hands on and then back-testing it to see what trends and patterns might reveal themselves.

In some cases, the results were quite surprising. As we examined the data, we found a number of examples where there was a clear and strong correlation between price movements and the Mercury retrograde phenomenon. But that kind of correlation was not evident in every case. In fact, some other stocks and indices essentially seemed to be impervious to the effects of Mercury retrograde.

Even so, we discovered that it's useful to identify the effects of Mercury retrograde, whether there's a clear price movement or whether there seems to be no obvious effect at all. With this information in hand, we can reach well-informed opinions about where there are good trading opportunities and where there are trades that are best avoided. In every case, we can be much more confident in deciding whether or not to take active trading positions while Mercury is retrograde.

In the chapters that follow you'll find a summary of that research. As you study those results, pay particular attention to the differences in the unique responses of each stock or index. Then, if you do decide to use the Mercury retrograde phenomenon in your own trading, be sure to add your own back-testing to the mix. It is only when you have personally encountered the Mercury retrograde effect for yourself that you will have the confidence it takes to profit from this unique astro-trading advantage.

Mercury Cycles and Market Indices

As we consider the ways in which major stock market indices from around the world respond to Mercury retrograde cycles, one thing becomes obvious almost immediately: the markets don't resonate with Mercury in uniform ways!

Each market does in fact have its own unique characteristics, its own trading pace, and its own intrinsic style and rhythm of communication. Although Mercury has a common role in connecting with the basic elements of trading and commerce no matter what the venue is, its actions are nevertheless modified by the circumstances it encounters, producing nuances that are reflected in each market's individual response to Mercury stations and other Mercury phenomena.

In particular, as we examine the impact of Mercury retrograde periods on market indices, we can readily see that this astrological event has a strong impact on some markets, and a much weaker effect on others. In like manner, the Mercury retrograde effect seems to be fairly short-lived in some markets, but in others the response lasts much longer.

With that in mind, we've back-tested the response of a variety of markets to Mercury retrograde periods. In doing so, we've measured that response in three different time frames.

To begin with, we've measured the price movement each market exhibits during the period between the retrograde station and the direct station, which is the basic context of each Mercury retrograde period and the time that has traditionally been considered problematical.

Next we've measured the price response during the period beginning with the Mercury retrograde station, and ending with the time following the direct station when Mercury returns to the same degree of the zodiac at which it has originally gone retrograde, its "retrograde return".

Then we've looked at the price action solely during this final slice of the Mercury retrograde phenomenon, starting with the time of Mercury's direct station and ending with the time of its retrograde.

Since previous research by Bill Meridian has shown that certain Mercury phenomena can have markedly different effects when they occur in different signs of the zodiac, we've also looked at the price behavior of the indices in our study through the filter of zodiac triplicities — the division of the zodiac signs by element, with three signs in each element. Based on this system, the Fire signs are Aries, Leo, and Sagittarius; the Earth signs are Taurus, Virgo, and Capricorn; the Air signs are Gemini, Libra, and Aquarius; and the Water signs are Cancer, Scorpio and Pisces.

In each case we've based the selection of triplicity on the zodiacal position of Mercury at the retrograde station, and have measured changes in price one day after the retrograde station, 14 days after the retrograde station, and seven days after the direct station.

In all of our examples the time frame for the back-testing was based simply on the amount of historical market data that was available at the time of our research. But because Mercury retrograde cycles repeat with such frequency, even a relatively short time span, with market data going back just a few years, can give us a sufficient number of Mercury retrograde periods for us to get a good idea of the way that a particular index responds to this planetary phenomenon.

Standard & Poors 500 Index: Back-Tested Historical Mercury Retrograde Performance

All Mercury Retrograde Periods

Retrograde Station to Direct Station	Average % Change	0.39%
Retrograde Station to Retrograde Return	Average % Change	0.46%
Direct Station to Retrograde Return	Average % Change	0.07%

Mercury Going Retrograde in Fire Signs

1 Day after Retrograde Station	Likelihood of Higher Prices	49.0%
14 Days after Retrograde Station	Likelihood of Higher Prices	63.3%
7 Days after Direct Station	Likelihood of Higher Prices	62.7%

Mercury Going Retrograde in Earth Signs

1 Day after Retrograde Station	Likelihood of Higher Prices	57.7%
14 Days after Retrograde Station	Likelihood of Higher Prices	61.5%
7 Days after Direct Station	Likelihood of Higher Prices	54.9%

Mercury Going Retrograde in Air Signs

1 Day after Retrograde Station	Likelihood of Higher Prices	53.1%
14 Days after Retrograde Station	Likelihood of Higher Prices	55.1%
7 Days after Direct Station	Likelihood of Higher Prices	53.2%

Mercury Going Retrograde in Water Signs

1 Day after Retrograde Station	Likelihood of Higher Prices	50.0%
14 Days after Retrograde Station	Likelihood of Higher Prices	45.5%
7 Days after Direct Station	Likelihood of Higher Prices	55.6%

Austrailian All Ordinaries: Back-Tested Historical Mercury Retrograde Performance

Mercury Retrograde Periods & the Dow 30 Stocks

The 30 stocks that make up the Dow Jones Industrial Average provide us with an ideal laboratory for studying the impact of Mercury Retrograde periods on individual equities. They are, after all, very well-known and widely-traded issues, with well-documented trading histories. Because that's the case, it's a fairly straightforward process to examine the prices of these stocks before, during, and after the times when Mercury has been in retrograde motion in the past.

Even more importantly, however, an examination of the Dow 30 stocks gives us a sampling that's broad enough to demonstrate unequivocally one important principle: not all stock issues respond the Mercury Retrograde periods in the same way. As we compare the responses of these issues to the influence of Mercury, we learn something about the differences in the "personalities" of the 30 stocks—some of them react quite dramatically when Mercury goes into retrograde motion, while others reserve their strongest responses for the Mercury direct stations. And there are some stocks that are inexplicably much more lethargic in their reactions to Mercury Retrograde periods, in spite of the fact that these same stocks may have a general history of definitive market action, with clear trends and price swings that have made them attractive as trading candidates on a fairly consistent basis.

But there's one other factor that we have to take into consideration here as well. When we look at market indices we are primarily concerned with price histories and the overall behavior of a group of factors in the markets. In such cases, we may or may not have specific horoscopes that become a part of our analysis. When we examine the trading history of the Standard & Poors 500 Index, for example, we may want to take a look at the horoscope for the New York Stock Exchange, but that inception chart for the New York Stock Exchange is not the sole factor that drives the price action in the S&P. In fact, there is only a tenuous relationship at best between the exchange and the market index, since one is an institution and a venue for trading while the other is a reflection of an aggregate of specific trading activities that fluctuates over time.

On the other hand, when we look at an individual stock, whether or not it happens to be part of the Dow Jones Industrial Average, we have a specific horoscope we can examine with an intrinsic relationship to the trading of the stock itself—the First-Trade horoscope. The First-Trade horoscope is exactly what the name implies: a chart that is calculated for the time of the opening bell on the date when the stock was first publicly traded on the exchange. This is typically not the date of the Initial Public Offering, since IPO shares are normally pre-subscribed in large blocks through exclusive institutional offerings by underwriting firms and are generally not available to the broader public on the open market on the IPO date itself.

Nor is a First-Trade chart an attempt to time precisely the exact moment in the course of a trading day when shares of an issue first changed hands and moved across the ticker. Instead, by creating a horoscope for the opening of the exchange on the day that the stock was first available for purchase by the general public, we have an active symbolic representation of the stock itself. In taking this approach we are following the lead of George Bayer, who noted that the time of the opening bell indicates the moment when a stock is first available for trading, and it is thus the true beginning of its trading career. This system of timing First-Trade horoscopes by the opening bell has been further popularized by Bill Meridian in several editions of his fine book *Planetary Stock Trading*, which is an invaluable resource for anyone who is looking for a sensible, well-organized approach to engaging in the equities markets with the astro-trading advantage.

While a First-Trade horoscope may in some ways actually be descriptive of the underlying company whose shares are being traded, and while it may share some commonality with other significant horoscopes connected with the company (such as a horoscope for the date of incorporation or for the opening of a corporate headquarters building), the real role of the First-Trade chart is to give us insights

into the trading potential and responsive dynamics of the stock rather than the company. The structures, patterns, harmonics, and sensitive points in the First-Trade chart can give us important clues in understanding the guiding dynamics of the stock's trading activity, and when we examine key turning points or major trend accelerations in the trading history of a stock we typically expect to see some fairly clear correlations with the First-Trade horoscope, either by transit, secondary progression (direct or converse), or solar arc direction.

The angles of the First-Trade horoscope (Ascendant, Descendant, Midheaven, and Nadir) are particularly important, as are the Sun and the True North Node of the Moon. In working with a First-Trade chart, we give extra attention to transits to these sensitive points, even as we simultaneously strive to see the First-Trade horoscope as a whole. (There are some interesting correlations here with the Personal Points in the Uranian System approach to symmetrical astrology, but they would lead us into a digression that's far beyond the scope and focus of this book.) When we see transits applying to the angles in a First-Trade horoscope, particularly transits by Jupiter or Saturn, we typically have an important indication that opportunities for potentially profitable trades are on the way. Based on those indications, we can add fundamental and technical analysis to our observations and further refine our understanding of the astrological dynamics at work before making a final decision about the advisability of entering a particular trade.

Above all, an examination of a First-Trade horoscope can give us a quick but comprehensive look at combinations of internal forces that can drive the price of a stock in active trading, especially when well-defined chart patterns, planetary pictures, or dominant planets are astrologically activated. While there is ultimately no suitable substitute for patient observation of the rhythms and nuances of the price action of the stock itself during its trading history, the overview and insights that the First-Trade horoscope provides offer us a significant advantage in our analysis. The First-Trade chart isn't meant to replace technical analysis of price trends, but when it's added to the mix we can gain the kind of confirmation that can enhance our confidence in the markets and make our efforts as astro-traders much more profitable and enjoyable.

It is in that context, then, that we examine the role that Mercury plays in the First-Trade horoscope, as well as the role played by transiting Mercury, particularly during the times that Mercury goes into retrograde motion, resumes direct motion, and finally returns to the point of its retrograde station.

While Mercury is rarely the most important single factor in a First-Trade horoscope, it is nevertheless crucial for us to understand the particular role that it plays in any given First-Trade chart. Mercury is, after all, a key indicator of communication and commercial activity, so it always plays some part in the energetic expressions that make a stock unique. Trading itself is about communication and commerce, and without understanding the action of Mercury in the First-Trade chart we can't hope to comprehend the true potential that a particular offers us as a candidate for trading. Our examination of Mercury in the First-Trade horoscope may reveal intrinsic chart structures of powerful significance in clarifying the core ways that a stock behaves in the market, or it may simply add a subtle refinement to our comprehension of the ways that the stock is likely to behave under particular circumstances. In either case, Mercury has a clear potential for opening up more profitable opportunities and for fine-tuning our analytical assumptions and market timing.

As we look at Mercury in a First-Trade horoscope, there are some key questions and considerations we need to keep in mind. Is First-Trade Mercury direct or retrograde? Is it Prometheus or Epimetheus? How fast is it moving? Does it play a role in important chart patterns or planetary pictures? What planetary aspects is it applying to or separating from? Is it essentially dignified, or is it debilitated? Is it involved in a mutual reception?

These are, of course, the normal sort of questions that any competent astrologer asks in examining the role of any planet in any horoscope, so they will be a matter of routine for any financial astrologer or astro-trader. But when we use them to review the role of Mercury in a First-Trade chart, they are especially important.

When we look at the role of transiting Mercury, however, we move from conventional astrological analysis and step into empirical research. By examining the historical trading action that has taken place during particular Mercury transits in the past, we can back-test our hypotheses about the effects of those transits, and we can get vital information that's grounded in verifiable data instead of symbolic speculation.

That's exactly the kind of work behind this analysis of Mercury Retrograde cycles and the thirty stocks in the Dow Jones Industrial Average. By compiling and studying actual price data for each of the stocks, we've been able to reach some conclusions about the unique ways in which they each respond to specific transiting Mercury phenomena. The focus here is not just on the times when Mercury is retrograde; instead, we've looked at the entire Mercury retrograde cycle, examining what happens to the price of each stock from the time of the retrograde station to the direct station (the "retrograde phase"), and from the time of the direct station to the retrograde return (the "direct phase"). In doing so, we've also compared the price action with Mercury retrograde stations in each of the zodiac signs, commenting on the most significant differences and summarizing the price responses by zodiacal element.

As you study the data for each of these stocks, you'll soon see that each stock has its own unique characteristics in the way that it responds to Mercury retrograde transits. By comparing these back-testing results with the timing of future Mercury retrograde periods, you may come up with some profitable trading ideas. And along the way, you'll also get acquainted with a model you can use in analyzing any stock for which you have a First-Trade chart and a suitable amount of historical price data.

The MMM First-Trade horoscope has Mercury Prometheus Direct in Capricorn.

Secondary progressed First-Trade Mercury went into retrograde motion on March 14, 2007. It will return to direct motion on June 9, 2030.

MMM shows some of its greatest price volatility when Mercury goes retrograde in water signs, especially with Mercury retrograde in Cancer, which can pull prices down sharply while Mercury is retrograde and then rally after Mercury resumes direct motion. Mercury retrograde in Aquarius has been particularly bullish for MMM, with the strongest price advances coming after the direct station.

The AA First-Trade horoscope has Mercury Prometheus Direct in Gemini.

Secondary progressed First-Trade Mercury will go into retrograde motion on June 18, 2018. It will return to direct motion on September 15, 2041.

AA exhibits some of its greatest bullishness when Mercury goes retrograde in Cancer or in Aquarius, with particularly strong upward price moves following the direct station in both cases. Mercury going retrograde in either Leo or Pisces will typically create more bearish price action for AA, especially prior to the direct stations.

The AXP First-Trade horoscope has Mercury Prometheus Direct in Taurus.

Secondary progressed First-Trade Mercury will go into retrograde motion on May 22, 2073. It will return to direct motion on June 2, 2096.

Mercury going retrograde in either Taurus or Leo generates particularly strong bearish tendencies for AXP, with declining prices both before and after the direct stations. Mercury going retrograde in Sagittarius is much more positive for AXP, however, with prices generally rising except for a brief pull-back right at the time of the direct station. Mercury going retrograde in Scorpio is also generally positive for this stock, but the greatest likelihood of higher prices then comes after the direct station.

The T First-Trade horoscope has Mercury Prometheus Direct in Aquarius.

Secondary progressed First-Trade Mercury will go into retrograde motion on May 7, 2040. It will return to direct motion on January 31, 2064.

This stock has demonstrated positive price trends during Mercury retrograde periods in several zodiac signs. When Mercury goes retrograde in Gemini, the bullishness is particularly strong prior to the direct station. When Mercury goes retrograde in Scorpio, look for higher prices during the retrograde phase, and even stronger bullishness following the direct station. Retrograde stations in Sagittarius also generate bullish trends, with the greatest strength prior to the direct station. But there's typically a good bit of weakness for this stock when Mercury goes retrograde in Pisces, especially just before the direct station.

The BAC First-Trade horoscope has Mercury Epimetheus Direct in Gemini.

Secondary progressed First-Trade Mercury will go into retrograde motion on October 14, 2021. It will return to direct motion on November 26, 2045.

BAC shows some of its greatest price volatility when Mercury goes retrograde in Taurus, with prices rising solidly during the retrograde phase and then declining sharply after the direct station. That same effect occurs with Mercury retrogrades in Libra, but the sell-offs after the direct station tend to be even more severe. On the other hand, BAC tends to be bullish when Mercury goes retrograde in Sagittarius or Pisces, with rising prices during both the retrograde and direct phases.

The CAT First-Trade horoscope has Mercury Epimetheus Direct in Sagittarius.

The CAT secondary progressed First-Trade Mercury went into retrograde motion on May 15, 1971, and resumed direct motion on January 12, 1992. Secondary progressed First-Trade Mercury will go retrograde again on March 22, 2087. It will return to direct motion on January 26, 2111.

When Mercury goes retrograde in Libra, CAT tends to sell off during the retrograde phase, but after the direct station the price action is decidedly bullish. That's also the case when Mercury goes retrograde in Pisces. When Mercury goes retrograde in Sagittarius, however, the opposite effect typically prevails, with rising prices during the retrograde phase and declining prices after the direct station.

The CVX First-Trade horoscope has Mercury Epimetheus Retrograde in Libra.

Secondary progressed First-Trade Mercury will begin direct motion on March 24, 2014.

In spite of some initial weakness right at the retrograde station, the times when Mercury goes retrograde in Aries or in Pisces are decidedly bullish for CVX, with the biggest price increases after the direct station. Mercury going retrograde in Virgo is also bullish. When Mercury goes retrograde in Cancer, however, the trend tends to be bearish, with the biggest decline during the retrograde phase. Some of the greatest volatility for CVX comes when Mercury goes retrograde in Gemini, with solid bullishness during the retrograde phase and a sharp sell-off getting underway at the direct station.

The VZ First-Trade horoscope has Mercury Epimetheus Retrograde in Cancer.

Secondary progressed First-Trade Mercury will go into direct motion on July 1, 2014.

The trading action for VZ tends to be solidly bullish when Mercury goes retrograde in Capricorn, with rising prices for the stock during both the retrograde phase and the direct phase. VZ shows some of its greatest price volatility when Mercury goes retrograde in Aries or Gemini. When Mercury goes retrograde in Aries, the stock typically sells off during the retrograde phase, but then slowly picks up more bullish characteristics after the direct station. When Mercury goes retrograde in Gemini, however, the price of VZ usually goes up during the retrograde phase but then slowly reverses to the downside following the direct station.

The DIS First-Trade horoscope has Mercury Epimetheus Direct in Sagittarius.

Secondary progressed First-Trade Mercury went into retrograde motion on September 14, 1991. It returned to direct motion on August 7, 2011.

DIS shows some of its greatest price volatility when Mercury goes retrograde in Leo or Scorpio. DIS typically has a short-term bearish reaction with a retrograde station in Leo, but moves into bullishness just before and after the direct station, only to become very bearish after that. There's a similar pattern with the Scorpio retrograde, but the bearishness resumes just prior to the direct station. This stock is also bearish when Mercury goes retrograde in Cancer or Libra, and is generally bullish with retrogrades in Sagittarius or Pisces, except for pull-backs around the direct stations.

Emerald Tablet Trades

We began our study of Mercury in the markets in this book with some background information on Mercury's role in mythology and the esoteric tradition. Our aim in doing so was to acknowledge the fact that there's much more to astro-trading than improving our forecasting by back-testing the correlations of planetary cycles to market movements and fine-tuning our timing by coordinating our trades with current planetary dynamics.

But the esoteric lore associated with Mercury is more than just a means of enriching our perspectives and of adding a salutary dose of humility to our approach to the cosmic patterns that are revealed in the markets. It's not only a way of adding the power of whole-brain thinking to our astro-trading efforts. It also offers us some very pragmatic guidelines that we can apply to our trading quite profitably.

The Emerald Tablet offers us a good example. When we first read the text of this arcane document, we may be inspired by the language and the poetry. We may be intrigued by its associations with the ancient world. Or we may just be confused. But if we study the Emerald Tablet from a more literal point of view, we can discover some specific ideas that can help us identify unique trading opportunities.

As we've already noted, this text was held in very high regard by alchemists throughout the ages. The alchemists, of course, focused most of their attention on transmuting base substances into gold. And as the Emerald Tablet itself states, the text is all about "the work of the Sun".

In both the alchemical and astrological traditions, the Sun and gold were considered equivalent. Gold was the specific metal of the Sun, and anyone seeking gold was in reality performing "the work of the Sun". Most of today's astro-traders don't actually spend much time stoking fires in alchemical furnaces, but like the alchemists of previous centuries they have a golden opportunity. In today's economic context gold can be acquired as the physical metal, or as a trade in futures, options, or ETFs. Each approach offers its own unique advantages and carries its own unique risks, but in every case trading in gold today is just as much "the work of the Sun" as the labors of the alchemists were in the ancient world.

So what advice can this ancient wisdom provide for us if we're trading gold? As the Emerald Tablet informs us, when we perform the work of the Sun we need to pay attention to the fact that "that which is above is like that which is below, and that which is below is like that which is above." In other words, we can discover potentially profitable trading opportunities when we examine gold at the times of the superior and inferior conjunctions of Mercury and the Sun.

The Planetary Basis of Emerald

Tablet Trades

The most obvious correlation is in the price of gold. In many cases, we will find that the price of gold at the time of an inferior conjunction is repeated at the time of the next superior conjunction, regardless of what happens to the price in the interim. This little bit of knowledge can help us take potentially profitable positions in the yellow metal, because it increases the likelihood that our trade will reach a particular price target at a specific time in the future.

In applying this technique, however, we don't try to match the inferior-conjunction price exactly. We aren't concerned with timing the Sun/Mercury conjunctions to the minute, especially since they sometimes occur outside the range of normal trading hours. Instead we look at the daily price range of gold on the trading day nearest the inferior conjunction, and then look for the price range on the day nearest the superior conjunction to overlap, but not necessarily duplicate, that price range. When we find a notable divergence from these price ranges during the interim period, we have a opportunity to enter a trade—the greater the divergence is, the more potential profits the trade will offer us.

To help clarify this concept a little more, here are a few examples of this Emerald Tablet trading technique in action. In order to provide a uniform data source for the various illustrations featured here, the charts are based on daily price bars for the World Gold Index (XGLD), the Deutsche Bank AG exchange-traded fund indexed to the price of the physical metal.

September 27 2002

The price of Gold had been moving up since shortly after the Mercury retrograde station on September 13, 2002, but just before the Sun/Mercury inferior conjunction Gold sold off for a couple of trading sessions. The inferior conjunction itself brought a trading day with the price of Gold ranging from a low of 319.00 to a high of 321.20, with the session ending at 319.70.

Trading in Gold stayed fairly congested for more than a week after the inferior conjunction, but the price soon began to lose ground, taking Gold to a low of 309.10 on October 24, 2002. After that Gold moved into an uptrend until the Sun/Mercury superior conjunction.

The superior conjunction came on November 13, 2002, with the day's trading forming a bearish outside bar that put an abrupt end to a three-week rally. On the date of the superior conjunction Gold traded between a low of 317.00 and a high of 325.40, finishing the session at 318.90, less than a point lower than its closing price at the inferior conjunction.

July 18 2006

When the Sun/Mercury inferior conjunction occurred on July 18, 2006, Gold had just hit an important trading top at 676.10. Trading on July 18 took Gold sharply lower, falling from an intraday high of 654.50 to a low of 626.50 and a close at 631.60.

Gold found a bottom at 601.60 on July 24, 2006, moved back to a high at 656.23 on August 2, 2006, and then sold off into more congested trading and a low of 606.70 on August 29, 2006.

It was two days later, on August 31, 2006, that there was a superior Sun/Mercury conjunction, with Gold trading between 618.80 and 627.20 and closing at 626.70, back in the same price range that had been defined by the inferior station five weeks earlier.

November 8 2006

Trading in Gold had just moved into a period of congestion when there was a Sun/Mercury inferior conjunction on November 8, 2006. That trading day saw a low for Gold at 612.80 and a high at 626.10. The closing price for the day's trading was 615.60.

After the inferior conjunction, the trading action resolved itself into a modest wave down, with Gold finding a short-term bottom at 614.20 on November 17, 2006. From that point a solid uptrend was in place until December 1, 2006, with Gold hitting an intraday high of 649.80.

A more sustained downward move brought Gold to a low of 611.40 on December 18, 2006, but a rebound rally during the next couple of weeks brought the yellow metal back to a trading high of 645.00 on January 3, 2007. A lower close that day at 626.80 pushed Gold back down, with trading at the superior conjunction on January 5, 2007 ranging from a low of 601.60 to a high of 626.20. That was just one-tenth of a point away from the high from the inferior conjunction; Gold closed that day at 607.12.

May 18 2009

Gold had been in a two-week uptrend prior to the Sun/Mercury inferior conjunction on May 18, 2009, which saw the metal trade between a low of 915.20 and a high of 934.10, with a daily close at 921.70.

The uptrend continued until June 3, 2009, when Gold hit an intraday high of 992.10. The trend reversed at that point, however, sending Gold prices lower until the metal found support in the price zone defined by the Sun/Mercury inferior conjunction.

On July 13, 2009, as the superior conjunction took place, Gold traded between a low of 907.40 and a high of 923.40, with a daily close at 920.80

January 4 2010

The trading range for Gold on January 4, 2010, with the Sun/Mercury inferior conjunction, brought a low of 1093.90 and a high of 1124.60, with a daily close at 1121.80.

The Gold Index climbed to a high of 1163.00 on January 11, 2010, and dropped to a low of 1044.50 on February 5, 2010. This was followed by a rally up to 1145.80 on March 3, 2010.

While that rally high took Gold well above the price range that accompanied the inferior conjunction on January 4, the Emerald Tablet correlation held up nicely in this particular case, pulling the price of Gold back down in the days prior to the Sun/Mercury superior conjunction. When that conjunction came on March 12, 2010, Gold's trading range had returned to the inferior conjunction zone, with a low of 1097.30, a high of 1119.50, and a daily close of 1102.00.

December 2, 2011

When Mercury and the Sun met in an inferior conjunction on December 2, 2011 the daily trading range for the Gold Index was 1741.70 to 1767.10, with a close at 1751.30.

Following the conjunction Gold spent the rest of December in selling mode, hitting an intraday low of 1523.90 on December 29, 2011. After that, though, the yellow metal rallied again. The trading day at the superior conjunction, February 7, 2012, saw a price range which returned to the levels of the inferior conjunction, with an intraday low of 1712.60, a high of 1752.60, and a close at 1748.40.

Note especially the size of the price swings in this example. An astro-trader entering a long position following Gold's greatest negative excursion in December would have been in a position to collect a 14.7% profit holding Gold until the superior conjunction and selling at that point.

Trading Opportunities

While these example charts clearly demonstrate the power and precision of the Emerald Tablet trading approach, it's important to keep a few key notions in mind. After all, the Emerald Tablet system is certainly not the Holy Grail of astro-trading, guaranteeing infallible profits in any market under any circumstances.

First of all, remember that this trading technique has only been tested with "the work of the Sun" in trading Gold. While it may have validity with other markets as well, that applicability hasn't been tested or verified. If you'd like to try it with different trading opportunities, go right ahead. Just be sure to back-test it thoroughly with the market you are considering trading; don't put money at risk with this technique unless you're comfortable with the probabilities of success that back-testing reveals.

Secondly, the Emerald Tablet technique, like any other trading system, doesn't generate accurate signals 100% of the time. No system does. That's why it's vital to stay highly focused on disciplined money management if you're trading with the Emerald Tablet approach. If you are managing your risk appropriately with well-structured stop loss orders or hedging positions, you're certain to find this "work of the Sun" much more rewarding.

Finally, keep in mind the fact that the Emerald Tablet technique can only be applied on a limited basis. It's structured in the recurring patterns of inferior and superior conjunctions of Mercury with the Sun, and there are typically only three superior conjunctions during the course of a year. This is definitely not an everyday, bread-and-butter technique for frequent trading, but it does offer regular opportunities which are worth keeping an eye on.

Use the listing that follows to identify opportunities for Emerald Tablet trades. It lists the date and time of day for each conjunction, as well as the position in the zodiac where the conjunction takes place. The dates and times are calculated for Greenwich Mean Time throughout.

Other Mercury Trading Strategies

Although the Mercury cycles we have explored in this book offer us plenty of valuable clues that can help us identify high-probability trading opportunities, they certainly aren't the only Mercury phenomena associated with market movements. Nor do they represent all the possible strategies for using Mercury to generate bigger and more consistent profits with our astro-trading.

For example, when we are using a First-Trade horoscope as one of the components in our astro-trading analysis, we can apply all sorts of concepts and techniques employed by astrologers to that specific endeavor, much as we have done in looking at Mercury dynamics in the natal charts of traders. We can look at harmonic structures in the chart, or consider secondary progressions, converse progressions, and solar arc directions, as well as current and upcoming transits to those derivative horoscopes.

If you are well-versed in astrological methodologies there are really no limits to the experiments and hypothetical constructs you can apply to the astro-trading discipline, since market astrology always offers you the opportunity to back-test your hypotheses to find out in no uncertain terms whether your creative ideas will actually work in the markets or not. Experimentation is the doorway to new discoveries, and when we test new ideas about the astro-trading opportunities that Mercury offers us we can often get remarkable insights that can help us tune in to the nuances of potential trades in original and potentially profitable ways.

We are also fortunate as astro-traders today that we aren't the first to explore the connections between astrology and market action. Astro-trading pioneers and noteworthy researchers have gone before us, and some of them, along with market astrologers of the present day, have shared their observations about the ways that Mercury can impact market movements and play a role in setting up potentially profitable trades.

If we really want to enjoy the full advantage of Mercury's role in astro-trading, we need to take that research by others into consideration. Generally speaking, we always put ourselves at a distinct disadvantage if we ignore the efforts and experiences of others. When Mercury trading strategies are involved, however, we can easily compound that disadvantage, because we risk missing out on the information and intelligence acquired by others in ways that can make it impossible for us to profit from their experience at all.

In short, we owe it to ourselves to learn as much as we can about the ways that others have used the power of Mercury to get better results from their trading. Whenever it has been feasible, I've found it best to study primary sources and original presentations of research, and I recommend the same course of action to any astro-trader who is serious about applying advanced Mercury methodologies to a personal trading program.

In each case, however, it's important not only to read and ponder the original writings, but also to work through examples for the techniques that are being described, so that you can get a clear understanding of the processes and begin to internalize the methodologies.

Once you have done so, of course, you will want to apply your newly-learned Mercury trading techniques to contemporary market situations—begin with back-testing using a variety of recent market data, preferably with a market you have personally traded, or at least one that you are familiar with.

To get the most reliable results, back-test the techniques with data from bull markets, from bear markets, and from markets that were moving sideways in congested trading patterns. If your back-testing demonstrates to your satisfaction that the technique you are investigating does in fact have some validity in today's markets, then you can begin to use it in your own trading.

That's really the ultimate test; when your own money is at risk, and your own emotions and prejudices are added to the mix, you can make an intelligent decision about whether or not that particular Mercury

methodology deserves a more permanent place in your personal astro-trading toolbox.

With that approach in mind, here are a few contributions from other researchers and astro-traders that you may want to investigate. Each has its own merits and its own limitations, so in each case you will have to come to your own conclusions about whether or not there's a good match for you and your personal approach to astro-trading. In each case I've mentioned a particular individual solely because he or she has actively integrated Mercury dynamics into a trading strategy in one way or another.

In summarizing their work here, my goal is to help other astro-traders make better sense of the amazing variety of approaches to the markets which feature Mercury in a trading strategy. Along the way, I've tried to be candid about where I've found particularly useful insights and where I've encountered challenges, limitations, or unanswered questions, in the hope that my comments will make your own investigations a little easier and more profitable.

W.D. Gann

No book on astro-trading would be complete without mentioning the work of W. D. Gann. This master trader in stocks and commodities achieved nearly legendary status prior to his death in 1955, and in the decades since then his innovative and often mysterious work has inspired a never-ending stream of commentaries and interpretations as generations of traders have sought to comprehend and emulate his unique methodologies.

Although W.D. Gann wrote extensively about trading techniques and the behavior of the markets, he rarely mentioned astrology explicitly in his writings. "It is not my aim to explain the cause of cycles," he said. "The general public is not yet ready for it and probably would not understand or believe it if I explained it."

It's nevertheless clear to any careful student that astrology was an essential component of Gann's work. He combined his astrological knowledge with concepts and strategies from geometry, numerology, biblical studies, and the universal principles of the Law of Vibration, in many cases leaving it up to his readers to sort through his many allusions and figure out his trading methodologies for themselves. His idiosyncratic approach to mastering the markets can sometimes make it quite challenging for today's traders to apply Gann's principles to their own trading, but those who have taken the time to dig into Gann's work more deeply have typically found that it's worth the effort to do so.

In 1927 Gann presented some of his best astrological material in the form of a strange book called ***The Tunnel Thru the Air or Looking Back from 1940***. On the surface it seems to be a badly-written romance novel whose hero, Robert Gordon, is a pioneering aviator, trading wizard, and ingenious inventor who almost single-handedly defends the United States against foreign invaders in a global war, all while he is striving diligently to be reunited with the love of his life, a woman who has disappeared under mysterious circumstances.

While Gann's novel does in fact mention astrology admiringly a few times in the course of the narrative, ***The Tunnel Thru the Air***, at least on first reading, doesn't appear to offer much astrological substance at all. But in his foreword to the book Gann explained that it "shows the value of science, foreknowledge and preparedness," "contains a valuable secret, clothed in veiled language," and recommended that the novel be read three times.

"You will read it the first time because you are interested in the love story and for amusement," he said. "This will create a desire to read it a second time for instruction and knowledge. The second reading will unfold some of the hidden meanings and you will gain knowledge thru understanding which will stimulate an incentive to put knowledge into action. You will read it the third time because you want to make your dreams and ideals become real and find how to start knowledge into action."

He added that "When you read it the third time, a new light will dawn." The kind of insight he was

talking about actually comes when you as a reader engage with *The Tunnel Thru the Air* at a deeper level, specifically by paying attention to every date mentioned in the narrative, no matter how inconsequential it may seem. If you calculate a horoscope for each date mentioned in the book, and then study those horoscopes with an ephemeris handy for reference, the real structure of the narrative soon begins to reveal itself - this insipid romance novel is in reality a textbook filled with examples that illustrate the power of the astro-trading dynamics with specific planetary events, most notably eclipses, major conjunctions, and planetary stations. Throughout the book these examples are connected with casual or sometimes oblique references to economic conditions, changes in market trends, or the successful stock and commodity trades that Robert Gordon uses to amass his personal fortune.

It is through a study of the horoscopes associated with the dates mentioned in *The Tunnel Thru the Air* that Gann's use of Mercury become evident. While they are certainly not the central planetary dynamic inferred in the book, Mercury actions were clearly an important feature of Robert Gordon's successful cotton trading campaign, which is described intermittently in the first half of the novel. Gordon makes his initial futures contract for 200 bales of July cotton on the date of a Sun/Mercury superior conjunction, and many of the key trading decisions and market moves mentioned in the book come on the dates of Mercury aspects to other planets in longitude or declination, Mercury stations, or Mercury ingresses into various signs of the zodiac.

It takes a lot of hard work and patient analysis to give *The Tunnel Thru the Air* the kind of meticulous attention it deserves, but the endeavor makes a great training program for an aspiring astro-trader who really wants to internalize the impact of planetary cycles in the markets. But don't expect to study the work of W.D. Gann as a quick and easy path to astro-trading success.

George Bayer

Along with W.D. Gann, George Bayer was one of the true astro-trading masters whose groundbreaking work during the first half of the twentieth century helped to define an entire field of endeavor while demonstrating its incredible effectiveness in the world of active trading. But while W. D. Gann relied heavily on astrology in his market timing, he rarely spoke or wrote about astrology directly. Bayer, on the other hand, was much more open in giving credit to astrology as one of the key tools that he used in his successful forecasting and trading.

Even so, George Bayer was adamant in declaring that his approach to astrology was not like the lore that could be found in traditional astrology textbooks. While he used conventional methods in calculating horoscopes, he invented his own methods for interpreting charts and for applying astrological insights to the markets. In doing so, he became an innovator unlike any other. In fact, his thinking and methods were so original that they are sometimes quite challenging for today's astro-traders to comprehend, especially since his writings are riddled with digressions, obscure Biblical references, awkward analogies, and multi-lingual literary allusions. And to make matters even more difficult from our perspective today, much of what he wrote was either privately printed or distributed as mimeographed typescripts, so after seven decades much of it is long out of print and often hard to come by.

In spite of those obstacles, however, time spent studying Bayer's material is a valuable investment for any serious astro-trader. And it's of particular interest to us here that Bayer formulated an extensive list of astrologically-based rules for trading, including ones based on observations of Mercury phenomena that can't be found anywhere else in the astro-trading literature.

Although any of Bayer's publications are worth investigating, the primary source for his work with Mercury is his book *Stock and Commodity Traders'Hand-Book of Trend Determination: Secrets of Forecasting Values, Especially Commodities, Including Stocks* (privately published by George Bayer in Carmel, California in 1940). In that book Bayer lists 48 specific rules for trading wheat successfully.

Most of the rules are based on astrological analysis, and 17 of them involve Mercury in one way or another. Indeed, Bayer refers to Mercury as "the most important planet of all."

Some of Bayer's rules demonstrate a truly remarkable understanding of the potential effects that Mercury can have on market action, as least as far as wheat futures are concerned. For example, Bayer suggests constructing a geocentric horoscope for the exact time that transiting Mercury hits either 15° Aquarius or 15° Leo in its passage through the zodiac. On that horoscope we note the precise position of each of the other planets. Then, says Bayer, "As Mercury keeps on going through the zodiac and passes the places of the other planets," the astro-trader will find that "we get changes of trend" in the price of wheat.

While a reiteration or analysis of all George Bayer's Mercury rules is beyond the scope of this current book, his original work is well worth careful study, particularly because of the way that it combines truly innovative astrological methods with solid instruction in sensible trading discipline. While Bayer focused most of his trading on the wheat market, he also traded other commodities and some stocks as well, and it may prove profitable to back-test his rules in a variety of market situations.

Jeanne Long

In her book *Universal Clock: Forecasting Time and Price in the Footsteps of W.D. Gann*, published in 1993, Jeanne Long details her efforts to understand Gann's trading tools and techniques. After learning that Gann had spent time traveling in Europe and India in pursuit of trading insights, Jeanne Long decided to retrace some of Gann's journeys, which is when she found herself in London's British Museum, where she saw 5000-year-old clay tablets from the ancient city of Ur with "cuneiform writings describing the astronomical phenomena of the time. These tablets not only gave the planetary information but also predicted the events expected to occur at the specific time. Some tablets referred to the price of wheat in relationship to the planets Mercury and the Sun. It immediately became clear to me how W.D. Gann saw this as repetition of similar conditions, repetition of cycles and even repetition of price."

This realization led her to explore Mercury cycles in modern soybean trading, where she found that the planetary correlations still apply to price patterns. In *Universal Clock* she describes a variety of astrological trading techniques; while not all of them deal with Mercury, they are important material for any serious astro-trader, making this book extremely valuable reading for anyone committed to the profitable application of astrology to the markets.

Five years prior to her publication of *Universal Clock*, Jeanne Long also wrote *Basic Astrotech: A New Technique for Trading Commodities Using Geocosmic Energy Fields with Technical Analysis*. In this brief volume she outlines a technique for trading gold based on the heliocentric passage of Mercury through Sagittarius, a phenomenon that sets up about four specific trading opportunities each year.

Based on her observation that "When Heliocentric Mercury travels through the sign of Sagittarius, more often than not the price of Gold moves up," she sets out specific entry and exit rules for trading gold when this particular planetary transit is in effect. While this technique doesn't produce profitable trades 100 percent of the time, Jeanne Long's presentation of it in *Basic Astrotech* is worth studying closely because of the way that she integrates precise trading rules with Mercury dynamics.

Dr. Alan Richter

Alan Richter, Ph.D., a professional geneticist with an avocational passion for astrology and

investments, conducted some highly original research into astrological correlations with market phenomena. He used both geocentric and heliocentric models in his work, and published his findings and theories in a variety of periodicals. In 1996 Carol Mull collected sixteen of Dr. Richter's articles from 1984 through 1994 and published them in a compilation, *The Investment Astrology Articles of Dr. Alan Richter* (CATT Books, Indianapolis, Indiana). Several pieces in that volume mention ways of incorporating Mercury into astro-analysis of the markets.

One of Alan Richter's most interesting observations is the correlation between multiple orbital cycles of Mercury with long-term market trends. In particular, he noted that six orbits of Mercury (88 days x 6 = 528 days) and eleven orbits of Mercury (88 days x 11 = 968 days) approximate major trending patterns in the markets. Although Richter focused primarily on the U.S. equities markets, he also found correlations with these Mercury cycles and Gold, Treasury Bonds, Treasury Bills, the U.S. Dollar Index, and the NIKKEI.

Other studies by Dr. Richter include an examination of Mercury/Neptune dynamics and their impact on Gold prices, and some insightful observations of key points in the cycles of heliocentric Mercury. He noted that there's a correlation between Mercury at perihelion (its closest approach to the Sun) and Mercury at aphelion (the point in its orbit when it is most distant from the Sun) and major price trends in a variety of commodities.

While Richter's work is certainly innovative, his research is geared more toward longer-term investment patterns rather than toward short-term trading. It's worth a look by today's astro-traders, however, because the culmination of long-term market movements can set up particularly powerful trading situations that can be capitalized upon with an intelligent short-term application of the astro-trading advantage.

Larry Pesavento

An expert trainer of traders and a veteran trader himself, Larry Pesavento has made a number of significant contributions to the art and science of making money in the markets, ranging from explorations of artificial intelligence and computerized market algorithms to pragmatic, down-to-earth observations on the psychology of trading, in which he demonstrates the kind of rare combination of intellectual discipline and genuine humility that every trader should strive to model in the essential task of keeping ego out of the trading equation. Along the way, he spent several years exploring the application of astrology to the markets, and although he insists that he doesn't personally aspire to become an astrologer himself, he has documented his research in several important books on astro-trading.

In one of those volumes, *Harmonic Vibrations: A Metamorphosis from Traditional Cycle Theory to Astro-Harmonics* (published in 1991 by Astro-Cycles in Pismo Beach, California), Larry Pesavento details his research into a phenomenon he refers to as "combust", the conjunction of Mercury and Venus. His premise is that because of the proximity of these two planets to the Sun, their conjunction creates a significant amplification of the solar energy, influencing weather patterns and impacting crop yields and commodity prices.

Based on his research and back-testing, Larry Pesavento's conclusion was that the Mercury/Venus conjunction does indeed have an impact, but that the effect of this alignment is strongest when it is combined with important lunar dynamics. He found the greatest influence in the grain and soybean markets, but this phenomenon may be worth investigating in other markets as well.

Earik Beann

In *The Handbook of Market Esoterica*, Earik Beann discusses a variety of astrological and numerological methods for market analysis and timing. Using a one-year trading chart with daily price bars

for Microsoft (MSFT), he demonstrates some remarkable correspondences between price trends in the stock and a graph plotting Mercury's declination.

One of the things that's interesting about his work is that he demonstrates an important astro-trading principle: although he found that changes in price trend can have a close correspondence with changes in the Mercury declination trend, the critical thing to observe is the timing of the trend change rather than the direction of the trend itself. Thus, as Beann illustrates, there are times when the graph of Mercury's declination closely mimics the trend and direction of Microsoft, but at other times the declination graph needs to be inverted in order to see more clearly the correspondences with the price of the stock.

Earik Beann says that "most stocks do respond to Mercury's declination. What will happen is that you'll see a stock suddenly lock onto the declination, and begin to move in step with it, either following along or doing the opposite. Once that happens, the stock should stay in step for 6 months or so, and then it may fade out again. So what you need to do is track the declination, and be aware of when your stock starts locking on to it."

While this technique may have value for the astro-trader who is religiously following a particular stock over an extended period of time, it obviously has some limitations as a predictive tool, since the price trend must first be observed syncing up with Mercury's declination before the declination graph can be used to forecast upcoming prices and turning points. In other words, Mercury's declination sometimes shows a market correlation that may continue for some time once it starts to happen, but there's not necessarily any way of predicting in advance when or if that kind of correlation will actually occur at all.

Raymond Merriman

In his book *Geocosmic Correlations to Trading Cycles*, published as Volume 3 of *The Ultimate Book on Stock Market Timing*, market astrologer Raymond Merriman shares the results of his research on the impact of Mercury stations on the U.S. stock market, based on correspondences with price action in the Dow Jones Industrial Average and the S&P futures.

From his study of these market indices and Mercury retrograde cycles Merriman concludes that while traders can often anticipate market swings of about 4% near either the retrograde or direct stations, there is a much higher correspondence to significant moves in the market if traders allow an orb of 8 trading days before and after the dates of the stations when they set up timing parameters for their trades. He also comments that since traders tend to fluctuate in their decision-making process while Mercury is retrograde, it's wise to "take profits too soon" rather than to wait for turning points at conventional levels of support and resistance.

Raymond Merriman has done a massive amount of laborious research on the correlations of planetary phenomena to market trends, and his work on outer-planet cycles is valuable because it helps us identify the planetary interactions that have the greatest effect in moving the U.S. stock market. Even so, when it comes to Mercury cycles in particular, it's important to keep his research conclusions in proper perspective.

According to Merriman's work, if we are looking for a market move on the date of a Mercury station, plus or minus 8 trading days, we are in effect saying that we anticipate a significant market event on any one of 17 trading days. With five trading days in each week, this means that we are considering a time frame of roughly two-and-a-half weeks, or about 23 calendar days — approximately the duration of an entire Mercury retrograde period. If we're looking at both the retrograde and direct stations as potential trigger points, Raymond Merriman's guidelines thus suggest that we need to be alert for Mercury effects for about 46 days each time Mercury is retrograde. My personal experience has been that using an orb that broad severely limits the usefulness of this approach as a tool for short-term

market timing.

Bill Meridian

In addition to his excellent work on planetary stock trading, astrologically-based economic forecasting, and the power of eclipse paths in mundane astrology, Bill Meridian has created important models and methods for astrological market analysis. His work in that area has been featured as a vital component of several software programs for applying astrology to the markets, and it provides an essential back-testing framework for any astro-trader who hopes to succeed in using astrological dynamics intelligently and profitably.

Meridian's brief article on "The Development of Planetary Stock Market Forecasting" (available on his web site at billmeridian.com) provides a quick, easy-to-understand introduction to this important methodology. As an illustration of the technique, he uses the example of Sun/Mercury conjunctions and their impact on the stock market. As he describes his techniques in his article, one of Meridian's conclusions is that the zodiacal position of the conjunction is a key modifying factor in determining whether or not a particular Sun/ Mercury conjunction sets up market conditions that can be traded reliably.

Bill Meridian is a skilled technical analyst as well as an innovative astrologer and an extremely rigorous researcher. The methods that he has developed consistently provide useful guidance for aspiring astro-traders, and I've found them extremely helpful in my own work with the markets. His discovery that Mercury phenomena can have significantly different influences when they occur in different parts of the zodiac has been particularly useful in designing some of the empirical research models that have gone into the preparation of this book.

New Directions

Although there is much valuable information that can be gained from reviewing the work of market astrologers like the ones mentioned here, our main aim in presenting their efforts in this chapter is to provide a source of inspiration. While the planetary principles governing the movements of Mercury and their correlation to the markets are universal, they can be applied to astro-trading opportunities in a remarkable variety of ways, as these examples demonstrate so plainly.

Whether you're an experienced trader or are just embarking as a newcomer to astro-trading, keep these examples in mind as you move ahead with your efforts at market mastery. As you test Mercury techniques in your own trading and experiment with new ideas in your own research and in devising your own trading systems, remember that there are others who share this journey with you. There's a lot you can learn from their investigations. And, if you take the time to examine their work with Mercury as you set new directions for yourself, you're likely to realize that embracing the astro-trading advantage can put you in some very good company along the way!

Mercury Retrograde Periods

1900 - 2100

Whether we are back-testing Mercury Retrograde effects or whether we are looking for future times that may set up advantageous trading situations, it's of course essential that we know exactly when Mercury is retrograde.

While any good astrological software can generate lists of Mercury Retrograde periods quite quickly, and while you'll also find Mercury positions and stations listed in the tables of any geocentric ephemeris, it's also helpful to have a "hard copy" listing of Mercury Retrograde periods for easy reference.

Such a listing not only helps you make a rapid determination about specific times when Mercury is retrograde; it also offers the opportunity to observe the longer-term patterns in the cycle of retrogradation as Mercury moves through signs and elements in an orderly sequence during sequential retrograde periods. When you study those patterns and begin to internalize a sense of the cosmic ebb and flow that is such a distinctive characteristic of the Mercury Retrograde cycle, you automatically gain a richer understanding of the universal order that shapes the course of human events—and that motivates the motions of the markets as well.

With that second purpose in mind, the listing here covers two centuries, combining an attention to detail with a comprehensive perspective. The times and dates noted are all calculated for Greenwich Mean Time (UT), with no corrections for Summer Time, War Time, or Daylight Saving Time.

Zodiac Degree Index Mercury Stations 1900-2100

While it's useful to review a chronological listing of Mercury stations to get an intuitive understanding of the long-term flow of the Mercury cycles that can modify market behavior and help set up profitable trades, there are also times when it's important to find out when specific positions in the zodiac come into focus through their associations with Mercury stations.

That's why this Degree Index has been created.

It can be helpful, for example, to know months or even years ahead of time when a stationary Mercury will conjoin the midheaven or a key planet in a First-Trade horoscope, and to plan trading strategies accordingly. The same advantage can be applied to the analysis of an astro-trader's individual horoscope, not just as an approach to seeing stressful times and important opportunities in advance, but also as a tool for reviewing key events in the past, with an eye toward anticipating reoccurring patterns which can be managed more resourcefully with an awareness of the Mercury cycles at work.

The application of this index is not limited to the markets and trading activities, of course. It can also be useful in understanding mundane affairs, geopolitical events, and even celestial phenomena. We can, for instance, gain a lot of valuable insights by comparing the zodiacal positions of solar eclipses with the Mercury stations nearest the eclipse, and with the Mercury stations that have taken place (or will take place in the future) at the same zodiac degree as the eclipse point or the eclipse antiscion. When we discover those correlations of zodiac position, we are then able to learn new things about key relationships in time.

Mercury Stations Listed by Zodiac Degree

Aries

0° Aries	03/06/1940, 04/12/1959, 03/05/2065, 04/10/2084
1° Aries	03/08/1907, 03/09/1953, 03/07/1986, 04/12/2005
2° Aries	04/13/1926, 03/07/2032, 04/13/2051
3° Aries	04/14/1972, 03/08/2078, 04/13/2097
4° Aries	03/10/1920, 03/10/1999, 04/15/2018
5° Aries	04/16/1939, 03/12/1966, 03/10/2045, 04/15/2064
6° Aries	04/17/1985, 03/12/2012, 03/11/2091
7° Aries	04/18/1906, 03/13/1933, 04/18/2031, 03/13/2058
8° Aries	04/19/1952, 03/15/1979, 04/18/2077
9° Aries	03/15/1900, 04/20/1998, 03/15/2025
10° Aries	04/21 /1919, 03/16/1946, 04/20/2044, 03/16/2071
11° Aries	03/18/1913, 04/22/1965, 03/17/1992
12° Aries	03/19/1959, 04/23/2011, 03/18/2038, 04/21/2090
13° Aries	04/24/1932, 03/19/1959, 03/18/2084
14° Aries	03/21/1926, 04/25/1978, 03/20/2005, 04/23/2057
15° Aries	03/21/1972, 04/25/2024, 03/21/2051
16° Aries	04/27/1945, 03/23/2018, 03/21/2097
17° Aries	03/24/1939, 04/28/1991, 03/23/2064, 04/26/2070
18° Aries	04/29/1912, 03/24/1985
19° Aries	03/26/2031, 04/28/2037
20° Aries	03/26/1906, 03/26/1952, 04/30/1958, 03/26/2077, 04/29/2083
21° Aries	03/27/1998, 04/30/2004
22° Aries	03/29/1919, 05/02/1925, 03/28/2044, 05/01/2050
23° Aries	03/29/1965, 05/03/1971, 03/29/2090, 05/02/2096

24° Aries	03/30/2011, 05/03/2017
25° Aries	03/31/1932, 05/05/1938, 03/31/2057, 05/04/2063
26° Aries	04/01/1978, 05/05/1984
27° Aries	05/07/1905, 04/03/1945, 04/01/2024, 05/06/2030
28° Aries	05/08/1951, 04/03/2070, 05/07/2076
29° Aries	04/05/1912, 04/04/1991, 05/08/1997

Taurus

0° Taurus	05/10/1918, 04/06/1958, 04/05/2037, 05/10/2043
1° Taurus	05/10/1964, 04/06/2004, 04/06/2083, 05/10/2089
2° Taurus	04/08/1925, 05/11/2010
3° Taurus	05/13/1931, 04/09/1971, 04/08/2050, 05/12/2056
4° Taurus	05/13/1977, 04/09/2017, 04/08/2096
5° Taurus	04/11/1938, 05/15/2023, 04/11/2063
6° Taurus	05/15/1944, 04/11 /1984, 05/15/2069
7° Taurus	04/13/1905, 05/17/1990, 04/13/2030
8° Taurus	05/18/1911, 04/14/1951 04/13/2076
9° Taurus	05/19/1957, 04/15/1997, 05/17/2036
10° Taurus	04/16/1918, 04/16/2043, 05/18/2082
11° Taurus	04/16/1964, 05/20/2003, 04/16/2089
12° Taurus	05/21/1924, 04/18/2010, 05/20/2049
13° Taurus	04/19/1931, 05/22/1970, 04/18/2056, 05/21/2095
14° Taurus	04/20/1977, 05/22/2016
15° Taurus	05/24/1937, 04/21/2023, 05/23/2062
16° Taurus	04/22/1944, 05/25/1983, 04/21/2069
17° Taurus	05/26/1904, 04/23/1990, 05/25/2029
18° Taurus	04/24/1911, 05/27/1950, 05/27/2075
19° Taurus	04/25/1957, 05/27/1996, 04/24/2082
20° Taurus	05/29/1917, 04/26/2003, 05/29/2042
21° Taurus	04/27/1924, 05/30/1963, 05/29/2088
22° Taurus	04/28/1970, 05/31/2009, 04/26/2049, 04/28/2095
23° Taurus	06/01/1930, 04/28/2016
24° Taurus	04/30/1937, 06/02/1976, 06/01/2055, 04/29/2062
25° Taurus	05/01/1983
26° Taurus	05/02/1904, 06/03/2022, 05/01/2029
27° Taurus	06/05/1943, 06/03/2068, 05/03/2075
28° Taurus	06/05/1989, 05/03/1996, 04/09/2017
29° Taurus	06/07/1910, 05/05/1917, 06/06/2035, 05/05/2042

Gemini

0° Gemini	06/07/1956, 05/06/1963, 06/06/2081, 05/05/2088
1° Gemini	06/08/2002, 05/07/2009
